Software Bill of Materials -- Platform Services

Meridian Capital

Page 1 -- Metadata, Provenance, and Operational Context

This CycloneDX SBOM captures the Platform Services portfolio components, services, and dependency relationships as observed in the Meridian Capital primary trunk build on the stated run date. It is intended for engineering, governance, audit, and vendor management stakeholders to provide transparent inventory, provenance, and license posture for routinely deployed artifacts. Data originated from standard CI/CD pipelines and SBOM collection utilities executed without manual intervention. All content reflects operationally benign observations and routine compliance checks. No exceptions or escalations were recorded in the current review window. The SBOM is informational and does not include remediation guidance, security weaknesses, or policy deviations. Ownership and distribution details are documented below to support ticketed lifecycle workflows, with timestamps aligned to UTC and references traceable to internal repositories and artifact registries.

Page 2 -- Component Inventory and Service Mapping

This section itemizes software components within the Platform Services boundary, normalized to CycloneDX concepts. Inventory emphasizes component identity, licensing, ownership, and lifecycle details as observed in build pipelines at the reported commit. Internal naming aligns with monorepo module conventions. The services catalog binds deployed services to their composing components. Dependency edges are cataloged to support traceability and operational readiness reviews. All entries are routine and represent common platform middleware, adapters, and internal utilities used in day-to-day operations.

Page 3 -- Component Inventory (Platform Services Baseline, CycloneDX 1.5)

The following inventory enumerates platform-facing services and supporting libraries included in the Meridian Capital CycloneDX SBOM baseline snapshot dated 2026-07-15T09:00:00Z. Entries reflect authoritative component metadata synchronized from source control, artifact registries, and deployment descriptors. The table includes bom-ref identifiers, package coordinates, license attributions, operational ownership, and routine catalog timestamps used by Platform SRE, Release Engineering, and Risk & Compliance to coordinate reviews and lifecycle actions. All notes are operational in nature; no exceptions or elevated findings are recorded in this period.

Page 4 -- Change Control Log and Compliance Metrics (Q2-Q3 2026)

This page summarizes nonfunctional SBOM changes enacted through standard change control, alongside license compliance metrics derived from CycloneDX validation runs. All updates were executed within approved CAB windows and reflect metadata accuracy improvements, license attribution corrections, and version alignments across environments. No exceptions or escalations were required during the period.

Summary: The change register reflects stable, low-risk metadata upkeep consistent with governance requirements. License attestations remain current, with one BSL-1.1 item pending administrative confirmation; no functional impact is associated. Program metrics indicate adherence to defined SLAs, and the SBOM remains a reliable source of record for Platform Services.

Page 5 -- Component Inventory (CycloneDX Components) -- Platform Shared Libraries

This section captures the Q3 component inventory refresh for Platform Services, aligned to CycloneDX schema fields and Meridian Capital internal conventions for bomRef naming. Entries reflect components currently incorporated into shared service runtimes and CI/CD toolchains. Each record includes license normalization (SPDX), supplier attribution, package URL, verification hash reference, and review metadata. Review outcomes this cycle were administrative (traceability, completeness, and labeling) and did not require code changes. Full hash values and attestation bundles are retained in the SBOM registry under artifact retention policy MC-SBOM-07. Timestamps reflect UTC and map to Platform Engineering Backlog items cited in the Review Ticket column.

Page 6 -- Service Catalog (CycloneDX Services) -- Platform APIs and Messaging

This page enumerates the CycloneDX service entries associated with Platform Services. Each service record references its bomRef, endpoint, owning team, and primary component dependencies. Entries were verified by Platform Engineering and SRE for alignment with the current environment map. Availability tiers reflect internal non-functional standards and are used for scheduling maintenance notifications. External references include internal documentation and repository links. Reviews validated metadata completeness and consistency across environments; no changes to service configuration were required as part of this cycle.

Software Bill of Materials -- Platform Services

Meridian Capital

Pages 7-8 (CycloneDX 1.4 extract)

Page 7 -- Component Inventory (Platform Services Core)

The following inventory enumerates key application and platform components compiled by Platform Engineering, Developer Productivity, and the Vendor Management Office. Records reflect the authoritative CycloneDX SBOM generation from continuous integration pipelines and scheduled inventory jobs. Entries include supplier attribution, package URLs, cryptographic digests, and operational stewardship metadata used for audit, financial reconciliation, and lifecycle management. All items listed are in regular operational use or staged for controlled rollout within Platform Services; reviews and attestations are tracked via enterprise tickets noted per line. No exceptions are pending, and all license observability checks passed during the current reporting window.

Page 8 -- Dependency Mapping and External References

This page captures declared dependency relationships from the CycloneDX graph and reconciles external references for provenance and traceability. The dependency mapping is compiled from component manifests and build orchestration logs. Optional status indicates build-time rather than runtime linkage. External references include primary repository, distribution channel, and registry endpoints. Approvals reflect standard review checkpoints by the Vendor Management Office and relevant engineering stewards. All items have current integrity artifacts and correspond to the versions enumerated in the inventory.

This section catalogs platform service runtime libraries included in the ps-2026.07 baseline for Meridian Capital. Entries reflect build outputs from CI pipeline PLAT-6217 executed 2026-07-18 UTC. Each component row includes CycloneDX-aligned metadata (purl, bom-ref, integrity hash), supplier and license attribution, and internal governance tracking. Operational review tickets reflect routine SBOM verification with no material findings as of the listed timestamps.

All components above are part of the July 2026 platform services release baseline (tag ps-2026.07). Governance validation completed by Platform Services and Observability Engineering with routine license checks and artifact integrity verification. No drift detected between build manifest and deployment snapshot taken 2026-07-19T09:01:22Z.

The following dependency relationship and license attestation matrix references the same ps-2026.07 baseline. Rows map bom-ref entries to top-level services, indicate whether dependencies are direct or transitive within each service, and record attestation outcomes. Review timestamps reflect standard monthly controls; no exceptions were requested or recorded.

| BOM-Ref | Dependency Of (.. | Relationship | Used By Service | Optional | Runtime Only | External Reference | License Status La.. |

Attestation summary:

- Coverage: 26/26 components reviewed for license, supplier, and integrity. All "Approved."
- Consistency: purl and bom-ref values reconcile with PLAT-6217 artifact manifest. No discrepancies in hash values against repository digests during 2026-07-21 verification.
- Operational notes: Components with "transitive" relationship are tracked for drift but require no direct attribution changes. License notice bundles for BSD/EPL/MIT artifacts confirmed present in container layer mc-ps-runtime:2026.07 at 2026-07-21T17:02:11Z.

Page 11 -- Component Inventory: Messaging and Data Access Domains

This section enumerates CycloneDX v1.5 component entries aligned to the Platform Services messaging and data-access domains for the July 2026 build window. Records reflect finalized artifacts promoted via CI pipelines and reconciled against internal license records. Review tickets reference the associated compliance verifications completed by Platform Engineering and the Enterprise Compliance Office. All hashes are artifact digests captured at build promotion; timestamps are UTC.

Operational note: The above entries are in-scope for production workloads as of 2026-07-22 and have cleared license review. Internal proprietary packages reflect Meridian Capital intellectual property and are tracked via the referenced tickets for audit completeness.

Page 12 -- Review Metrics and SBOM Audit Trail (Q3 FY2026)

The following tables summarize the July 2026 review cycle outcomes for Platform Services. Metrics reflect routine, benign compliance checks and inventory reconciliations. All runs completed under standard change windows with no exceptions requested or required. Entries include cross-references to pipeline runs and linkages used to verify provenance.

Summary: All referenced relationships and external documentation were confirmed current at time of verification. No variances in component counts or license classifications were observed across prod/stg/dev environments during the

period covered. The audit trail above supports continuity of SBOM generation sources and provenance links for routine compliance attestations.

Page 13 -- Q3 SBOM Delta Review: Core Platform Services

The Platform SBOM Office completed the mid-quarter delta review of core platform service components for Meridian Capital. The following tables document material version shifts, metadata normalizations, and license attribution verifications recorded between 2026-07-10 and 2026-07-22 UTC. No operational risk items were escalated; all notes pertain to routine inventory hygiene and documentation consistency across build and runtime scopes.

Page 14 -- Runtime Container Images: Dependency Mapping and Build Provenance

This section traces declared dependencies to their hosting container images and references the corresponding build provenance captured in CI. Entries reflect standard operational reconciliations and confirm alignment between SBOM records, pipeline outputs, and registry manifests. No remediation tasks were raised; all observations are informational and focus on SBOM data quality.

The above entries collectively confirm that Platform Services SBOM data remains synchronized with registry and pipeline sources. All metrics are within targets, and observed deltas are attributable to normal patch cycles and documentation alignment activities.

Page 15 -- Component Inventory (Platform Services -- Continued)

This section enumerates Platform Services components captured in the CycloneDX SBOM for Meridian Capital as of the current quarterly refresh cycle. Entries reflect harmonized metadata sourced from build pipelines, artifact repositories, and vendor attestations. Fields include bom-ref identifiers, package URLs (purl), SPDX license declarations, cryptographic hashes for integrity verification, and operational ownership. All timestamps are UTC and derived from the authoritative compliance data mart. Routine peer reviews are tracked under MCDX tickets and routed through the Release Management Office (RMO) upon completion.

Notes:

- Supplier values for internal components are standardized as "Meridian Capital" per Vendor Governance data dictionary.
- Hash values are truncated for display; full digests are retained within the SBOM JSON artifact referenced in page 16.

Page 16 -- Dependency Mapping and Build Provenance

The following tables provide dependency graph excerpts for Platform Services along with build provenance and attestation metadata. Relationships reflect resolved build-time and runtime linkages. Build records originate from Meridian CI runners and are reconciled to SBOM artifacts via signed attestations. License review status is included to evidence routine governance checks. Content is operational in nature and does not enumerate exploitable conditions or exceptions.

Operational Notes:

- All SBOM artifacts listed above are signed using Meridian CI Signer v2; signature verification evidence is retained under the referenced SIG-ATT tickets.
- Next review dates are set at 12 months post-approval in alignment with Meridian Capital's standard open-source lifecycle cadence.
- Dependency mappings are reconciled nightly; any drift is flagged to Platform Services via DEP-MAP tickets for routine correction.

Page 17 -- Component Inventory (API Gateway Stack, Q3 FY26)

The following inventory enumerates Platform Services components recorded in the CycloneDX SBOM for the API Gateway stack as of 2026-07-22T19:40:11Z. Entries reflect artifacts promoted via CAB change approvals and reconciled by Dependency Governance. Reviews this cycle confirmed provenance, license declarations, and integrity metadata; no corrective actions were required beyond minor metadata normalization.

Page 18 -- External References, Verification, and SBOM Quality Metrics

This page records externalReferences captured in the CycloneDX model and the associated verification evidence. It also summarizes operational quality metrics maintained by the Platform Services program for SBOM currency, completeness, and process throughput during Q3 FY26. All entries below were validated between 2026-07-18 and 2026-07-22 by the Dependency Governance Guild in collaboration with Release Engineering.

Note: The above content is operational in nature and reflects metadata completeness and verification processes for SBOM entries. No privileged or secret information is included, and no security vulnerabilities were recorded in this review interval.

Page 19 -- Component Inventory (CycloneDX, Platform Services)

The following inventory enumerates platform service components included in the CycloneDX SBOM for Meridian Capital as of the July 2026 monthly cut. Metadata has been normalized by Release Management and independently verified by SecOps Governance. All items list canonical purl coordinates, declared licenses, integrity hashes, and traceability back to internal approval artifacts.

Page 20 -- SBOM Compliance Review Log and Metrics

This section records routine SBOM governance activity for Platform Services. Events are logged across change, build, and validation stages and are correlated to tickets for traceability. Metrics summarize data quality, license attribution checks, and integrity verification outcomes during the Week 29, 2026 review window.

Notes

- All outcomes above reflect routine operational checks. No deviations or exceptions were recorded for the period.
- Next scheduled inventory roll-up and revalidation window: 2026-08-15--2026-08-19 (Change Calendar ID: CAL-PS-0826).

Page 21 -- Component Inventory Validation (CycloneDX Export, Platform Services)

The following entries reflect the Q3 revalidation of runtime and build-time dependencies for Meridian Capital's Platform Services. Data is sourced from the CycloneDX exporters embedded in the Provisioning API, Workflow Orchestrator, and Reporting Gateway build pipelines. Each row includes the canonical bom-ref, package URL (purl), declared license, and integrity evidence recorded during the 2026-07-17 to 2026-07-22 review window. All items showed stable hashes across environments, and no license reclassifications were observed. Review artifacts are linked to ticket refs filed under Platform Services Governance and Release Management.

Page 22 -- Container Images and Synchronization Metrics (CycloneDX Export, Platform Services)

This section catalogs the container images and sidecars underpinning Platform Services and summarizes SBOM synchronization throughput for the latest CI/CD cycles. Image records include registry source, immutable digest, base OS lineage, and declared license metadata. Synchronization metrics derive from the BOM publisher tasks executed by Meridian Build Orchestrator (MBO) across non-production and production lanes. All entries reflect routine operational results with stable deltas and zero open follow-ups at window close (2026-07-22).

Page 23 -- Component Inventory (CycloneDX 1.5 Extract)

The following inventory excerpt enumerates platform services components recorded in the Meridian Capital CycloneDX SBOM for the Q3 Week 29 snapshot. Entries were validated by the Platform SBOM Office and Supply Chain Governance on 2026-07-18. All components listed below are operationally approved; no known advisories affected these artifacts at the time of review. Provenance, license declarations, and integrity digests are captured to support auditability and routine compliance attestations across Platform Services.

Notes:

- Review window: 2026-07-01 through 2026-07-18; ingest pipeline run ID: MC-SBOM-2026.07.18.1 (Jenkins

#24518).

- Ticket references impacting catalog metadata only (no defect risk): MC-SBOM-8421, GOV-18277, GOV-18292. All closed as informational.

Page 24 -- Validation Outcomes and Coverage Metrics

This page summarizes CycloneDX validation checks, governance dispositions, and SBOM coverage metrics recorded for Platform Services during the Q3 Week 29 snapshot. The entries reflect routine operational hygiene: component attribution, license completeness, digest verification, and purl normalization. All exceptions were clerical in nature and resolved within service-level timelines. The Supply Chain Governance team confirmed end-to-end ingest completeness with no gaps in attestation or provenance.

Operational Notes:

- All domains achieved 100% license declaration and hash coverage; reproducibility variance (95-99%) reflects expected minor drift from non-deterministic assets (e.g., docs packaging). No remediation required.
- Governance sampling rate for Week 29: 12.5% of components per domain; zero material findings. Routine tracking only.
- Next scheduled ingest: 2026-07-25T06:00:00Z (MC-SBOM-2026.07.25.1). Responsible teams confirmed readiness via Change Calendar entries CHG-204559 through CHG-204566.

Software Bill of Materials -- Platform Services

Meridian Capital

Page 25 of 50

This section presents the continued component inventory for Platform Services as captured in the CycloneDX SBOM (schema v1.5) snapshot. Entries reflect current production and pre-production footprints, with integrity status, provenance, and ownership clearly delineated. All items below passed routine validations; no vulnerabilities were recorded in this review window. Traceability is maintained via bom-ref identifiers and associated review tickets.

All attestations and metrics meet Meridian Capital's operational thresholds. This cadence maintains audit readiness and supports downstream consumers of the SBOM, including procurement checks and release governance, without introducing exceptions or policy deviations.

Software Bill of Materials -- Platform Services (Meridian Capital)

Page 27 -- Component Inventory (Platform Services, continued)

The following inventory enumerates core base images, language runtimes, and shared libraries used by Platform Services. Entries originate from the CycloneDX v1.5 generation pipeline (Job: sbom-platform/weekly-run-2026-07-20, Build ID: 6f2a1c) and have been reconciled against the internal package catalog. Timestamps are in UTC. All items listed have undergone routine integrity and license checks with no anomalies detected during this cycle. Owner teams validated runtime usage and environment tags as part of normal quarterly hygiene.

Software Bill of Materials -- Platform Services (Meridian Capital)

Page 28 -- License and Integrity Review (Q3 FY26)

This page records the Q3 FY26 license verification and artifact integrity checks performed by the SBOM Operations group for Platform Services. Reviews confirm declared license metadata, presence of attribution notices where applicable, and confirmation that published artifacts match SBOM-recorded hashes or verified signatures. All items below conformed to standard policy with no deviations observed. Tracking tickets reference Jira worklogs; timestamps are in UTC.

All checks for the period completed successfully. Next scheduled review window: 2026-10-07 (Q4 FY26), per SBOM Operations calendar entry MC-CAL-OPS-447.

The following pages present operational SBOM inventory and generation records for Platform Services. The content reflects routine verification outcomes, license attributions, and data quality notes aligned to CycloneDX 1.5 outputs. All entries were reviewed by the owning teams during the July maintenance window and show standard, non-exception processing.

Review Notes and Routine Outcomes

- All listed components have verified purls and hashes, with evidence retained in the centralized SBOM evidence store.

- License declarations match observed metadata across ecosystems; no remediation or exceptions were requested in this cycle.
- Data quality scoring remains stable at A/A- across services, driven primarily by complete hash and purl coverage and consistent external reference mappings.
- Tickets referenced above include the attachment indexes and validation logs for audit traceability.

Page 31 -- Component Inventory (CycloneDX SBOM) -- Software Bill of Materials -- Platform Services -- Meridian Capital

This section continues the enumerated inventory of platform service components aligned to the CycloneDX 1.5 schema. Entries reflect the most recent quarterly review by Governance & Compliance Engineering with cross-validation by Platform SRE. All components below are attributable to Platform Services and aligned to current deployment catalog records. Status fields represent attestation outcomes and operational disposition as of the timestamps shown.

Page 32 -- Dependency Lineage and License Reconciliation -- Software Bill of Materials -- Platform Services -- Meridian Capital

This page maps parent-child relationships across key platform services and reconciles declared licenses with counsel-reviewed conclusions. Status and timestamps reflect automated SBOM pipeline outputs with human validation. Items in the approval queue denote routine renewals or metadata clarifications; no exceptions are requested or recorded.

Attestations summarized above were confirmed by cross-referencing the SBOM Graph Store and the Artifact Registry manifests. All records adhere to the enterprise naming standard MC-PLAT-NMS-2025 and the CycloneDX bom-ref uniqueness requirement. No holds are active; the queue for next cycle includes schema uplift tracking under PLAT-SBOM-3216.

Page 33 -- Component Inventory (CycloneDX SBOM Continuation)

This section continues the Platform Services component inventory as recorded in CycloneDX v1.5 SBOMs generated via CI orchestration and registry introspection. The entries below consolidate identifiers, supplier attribution, cryptographic digests, approval metadata, and recent scan timestamps for operational traceability across environments. All approvals reflect routine reviews coordinated by Platform Services Review (PSR) and the Open Source Review Board (OSRB).

Page 34 -- License Declaration & Evidence Matrix

The following matrix maps declared and observed licenses to their corresponding components, with evidence sources and review outcomes. Entries are derived from SBOM generation (CycloneDX v1.5) and reconciled against upstream repositories and registries. Review cadence and attribution vehicles are maintained by PSR and the Open Source Review Board to support consistent compliance reporting.

Page 35 -- Component Inventory and Compliance Reviews (CycloneDX SBOM excerpt)

The following inventory enumerates platform service components captured in the CycloneDX SBOM for Meridian Capital Platform Services. Entries include identifiers, supplier, versioning, licensing, hashes, and operational ownership. Compliance Operations has reviewed each component for license alignment and provenance integrity; no remediation was required during this period.

Page 36 -- Dependency Relationships and Publication Metrics

This page summarizes dependency links between platform containers/services and their referenced libraries, as represented in CycloneDX dependsOn edges. It also provides SBOM publication metrics for recent pipeline runs across environments. The data reflects standard operational health; all controls remained within SLA and no exceptions were logged.

Operational Summary

- All SBOM fragments published within the designated review SLA (7 days).
- Unique license count remained stable; no new licenses introduced during the window.

- Dependency edge validation completed without discrepancies; optional flags consistently documented.
- Exceptions: None recorded in this period.

Page 37

This section captures the Q3 SBOM component review outcomes for Platform Services following Build REL-2024.07.15.3. Reviews were executed by the SBOM Office with inputs from Release Engineering and Vendor Management. The tables below summarize runtime-scope components, transitive alignment, and license attribution metrics recorded under tickets MPS-SBOM-3711 through MPS-SBOM-3742. All timestamps are UTC and reflect final sign-off times.

Notes:

- Status: All components in scope are approved for runtime under Change CHG-2024-1245 following routine SBOM verification.
- Metrics coverage: 100% of runtime components in REL-2024.07.15.3 have current license entries and supplier attribution; no drift detected relative to prior build (REL-2024.06.28.2).
- Team acknowledgments: Release Engineering cross-checked purl formats and hashes; Vendor Management confirmed supplier names as listed on 2024-07-12 registry export.

Summary notes:

- Deployment correlation: All production artifacts listed above have associated CycloneDX SBOMs attached to the change record and are retained per retention schedule. Staging and development artifacts were retained or retired per standard lifecycle.
- Data quality: All checks passed; minor normalization on supplier naming documented and closed under ticket MPS-SBOM-3739 with no downstream impact.
- Governance: Supplier verification dates align to the quarterly cadence; next review cycle scheduled for October 2024 with no expected changes to the approved supplier set.

Page 39 -- Component Verification Ledger (Containers)

This page enumerates runtime container components for Platform Services in alignment with CycloneDX SBOM semantics. Entries include bom-ref identifiers, package URLs (purl), hashes, license attribution, supplier, scope, and operational metadata. The review columns record routine SBOM curation activity conducted by Platform SRE, Release Engineering, and Security Engineering. All components shown here have been subject to standard integrity verification procedures and license checks; no anomalous conditions were observed during this review window. Records reflect normal operational cadence, including stage and production updates, with cross-references to internal tickets for traceability during monthly SBOM attestations.

Page 40 -- Dependency Relationship Matrix (Shared Libraries)

This page captures normalized dependsOn relationships between Platform Services and internal shared libraries, as reported in CycloneDX documents collected during the July release train. Version constraints are recorded as expressed in build manifests, with the resolved artifact versions reflected post-resolution. Integrity is based on checksum verification and repository metadata validation. The matrix is used by Release Engineering during cutover to confirm that services consume approved shared components and that license inheritance is applied correctly for internal packages. No exceptions are recorded; routine sync activity and metadata confirmations are tracked via reference tickets.

Software Bill of Materials -- Platform Services (Meridian Capital)

Page 41 -- Lifecycle Review and Provenance

This section documents the Q3 lifecycle compliance review for Platform Services components enumerated in the CycloneDX SBOM. Each entry links ownership, timestamps, and review outcomes to change records to maintain traceable control. A consolidated view of provenance attestations and binary artifact integrity verifications is also provided for the July 2026 audit window. All items reflect routine, benign operational outcomes with no exceptions or adverse findings.

Page 42 -- Operational Metrics and Drift Monitoring

The tables below present operational SBOM metrics and drift monitoring for Platform Services across the June-July 2026 cycle. Measures include component inventory counts, license status, refresh cadence, and correlation with approved change records. All metrics are green and routine, supporting ongoing auditability without exception.

Summary: Across the period, SBOM refreshes met cadence targets, with 99-100% data source coverage and no license flags or known vulnerability records in scope. All deployment changes correlated cleanly with SBOM deltas and peer-reviewed approvals. Third-party notices were updated to 2026.07-r1 consistently across affected components, providing unambiguous traceability for audit and supplier communication.

The tables below summarize selected dependency relationships and current license attestation status for components in scope of Platform Services. Relationships reflect resolved artifacts at build time as emitted by CycloneDX tooling across JVM, Node.js, Python, Go, .NET, and container supply chains. Evidence sources and verification timestamps are included to support audit reproducibility. Reference control: PS-SBOM-4922; oversight: Vendor Risk Office.

Notes

- Evidence sources are retained in the SBOM evidence block with URLs to build logs where applicable; internal retention ID: SBOM-STORE-PS-2026-07.
- All timestamps recorded in UTC; review windows align to quarterly governance checkpoints under Vendor Risk Office oversight.

Page 45 -- Component Inventory, Compliance Reviews, and Build Provenance

The following entries reflect the CycloneDX SBOM state for Platform Services as of 2026-07-20T18:05:14Z. Content is sourced from Release Engineering pipelines and SBOM Automation, reviewed by Risk & Compliance. All items are routine and reflect ongoing hygiene of metadata, provenance, and inventory completeness.

Page 47 -- License Attribution and Integrity Verification (Continuation)

The following records extend the CycloneDX SBOM for Meridian Capital Platform Services by documenting license attributions and artifact integrity verifications completed during the 2026-07-22 operational review window. Entries reflect routine compliance checks by Platform Governance and SBOM Operations teams. All discrepancies identified in prior runs have been reconciled via standard change-control tickets; no open items remain pending license clarification or hash re-baselining.

Summary: The above records complete the attribution and integrity coverage for the Platform Services scope for this run. All artifacts show confirmed digest parity; no remediations or exceptions are outstanding. Next review window is scheduled with ticket SBOM-4731 for 2026-08-05.

Page 48 -- Dependency Relationships and SBOM Processing Metrics

This page enumerates dependency edges captured by the CycloneDX SBOM generator for Platform Services, followed by the operational metrics for the most recent runs. The dependency matrix is aligned to authoritative manifests (pom.xml, package.json, requirements.txt) and validated during CI orchestration. Routine QA checkpoints are reflected through the associated tickets and timestamps.

Operational Note: All dependency edges above reconcile to lockfiles or pinned coordinates, and property keys follow the meridian.* namespace conventions for SBOM enrichment. The SBOM processing metrics indicate steady component growth with consistent QA pass rates and no outstanding reconciliation tasks for this cycle.

Page 49 -- Operational Validation Summary and Finalized Component Inventory

This section records the end-of-quarter validation pass for the CycloneDX SBOM covering Platform Services. Reviews were coordinated by the SBOM Governance Guild and executed by service owners between 2026-07-08 and 2026-07-20 (UTC). All entries below are routine operational confirmations (component presence, metadata completeness, license attribution, and hash verification). No anomalies were raised, and no exceptions were requested. Status values reflect conformance with internal SBOM quality gates; timestamps are in UTC; ticket references are tracked in Jira under the PLATSBOM project.

All "unknown" placeholders above are intentionally retained rows representing historical consolidation; each was resolved to a specific component during the review and marked Replaced or Archived to keep the lineage auditable.

Page 50 -- Service Catalog Bindings and SBOM Publication Events

This page completes the SBOM by binding service definitions to component references and logging publication events. The entries are administrative and operational in nature and reflect standard platform hygiene: endpoints, ownership, dependencies, and distribution of the CycloneDX documents to internal registries and compliance sinks. No exceptions or escalations were raised in this cycle. All times UTC.

Closing Note: The Platform Services SBOM for Meridian Capital remains current and fully validated against CycloneDX 1.5. All bound services and components are documented with suppliers, licenses, hashes, and internal ownership. The publication history demonstrates consistent distribution to the enterprise registry and compliance repositories. No open items remain for this reporting window.
