Meridian Capital

Data Lineage and Provenance Report -- Q2 2026

Prepared for: Enterprise Data Office (EDO), Finance Analytics (FA), Risk Data Office (RDO), Information Governance & Compliance (IGC)

Reporting Period: 2026-04-01 through 2026-06-30 (Q2 2026)

Report metadata

- Report Title: Data Lineage and Provenance Report -- Q2 2026
- Report ID: MC-EDO-LIN-2026Q2-001
- Version: 1.0 (Initial Release)
- Compilation Timestamp: 2026-07-08T14:37:22Z
- Prepared By: Data Platform Engineering (DPE), Lineage & Observability Squad
- Reviewed By: Information Governance Council (IGC) Change Advisory (2026-07-05)
- Approved By: Chief Data Office (CDO) Oversight (Approval Ref: CDO-APP-2026-0712)
- Source Control Tag: lineage-report-q2-2026@a7c2f2c
- Work Item References: JIRA Epic DPL-8041; ServiceNow Task SCTASK0102387

Executive overview

This report documents the current-state lineage and provenance across priority financial domains for Meridian Capital during Q2 2026. Coverage emphasizes end-to-end traceability of critical data assets supporting statutory and management reporting, with particular focus on Treasury Liquidity, Market Risk, and Regulatory Capital subject areas. The scope includes dataset- and field-level lineage where available, dependency maps for ingestion and transformation layers, and operational evidence of data quality monitoring. The content is designed to support internal attestations (quarterly control confirmations) and to inform continuous improvement tasks already planned for Q3 2026.

Highlights for the period:

- 96.4% lineage completeness across the in-scope subject areas (up from 93.1% in Q1), measured by the proportion of columns with documented upstream origin at least two hops back to source-of-record.
- 100% job-level provenance capture for orchestrated transformations in Finance Analytics workspaces (Airflow and Databricks jobs tagged and linked to business glossary terms).
- Reduction in "unknown source" flags from 41 to 9 through remediation of historical ingestion identifiers and standardization of dataset keys in Bronze and Silver layers.
- No material data control breaches reported; two non-material variances noted and resolved within SLA (details provided on page 2).

Scope and methodology

- Scope: Treasury Liquidity (DS-TRES-), Market Risk (DS-MRISK-), Regulatory Capital (DS-REGCAP-), and Shared Reference Data (DS-REF-). Excludes exploratory sandboxes and personal analytic workbooks.
- Lineage capture methods: automated metadata harvesting from orchestrators and engines (Airflow, Databricks, Snowflake) augmented by manual curation against the Meridian Business Glossary (Collibra) for selected high materiality fields.
- Provenance controls: run-to-run job identifiers, source snapshot tags, and record counts reconciled against ingestion manifests; non-production environments excluded from metrics.
- Quality indicators: nullness, referential integrity, transformation timeliness, and uniqueness checks, recorded via

Data Quality Service (DQS) with daily rollups.

Run execution summary (latest comprehensive capture)

- Lineage Run ID: LINRUN-2026Q2-0037
- Orchestrator Job: airflow.dag.lineage_capture_daily
- Execution Window: 2026-06-30T00:01:11Z to 2026-06-30T00:18:42Z (00:17:31)
- Status: Succeeded (no retries)
- Coverage Snapshot: 4,382 tables, 76,145 columns assessed; 72,986 columns with upstream mapping; 3,159 pending curation
- Operator: svc_dpe_lineage (service principal)
- Change Ticket for Schema Updates: CHG0039182 (Market Risk model uplift)

Environment parameters (operational context)

- Data Lake Platform: Azure Data Lake (Gen2), Region: East US 2
- Warehousing: Snowflake (Account: MC_PROD; Virtual Warehouses: WH_FA_GOLD, WH_RISK_SILVER)
- Processing Engines: Databricks Runtime 13.3LTS; Spark 3.4.1
- Orchestration: Apache Airflow 2.7 (managed)
- Metadata Repository: Collibra DGC 2026.1
- Data Quality Service: DQS 4.9
- Business Glossary Coverage: 1,247 active terms; 318 term-to-dataset bindings added Q2
- Data Classification: Predominantly Internal; PII fields tokenized when present; no Sensitive-Restricted datasets in this scope

Change log (Q2 lineage-affecting updates)

- CL-2026Q2-01: Decommissioned legacy Treasury cash feed DS-TRES_SRC_OLD01; replaced by DS-TRES_SRC_ODS11 (Effective 2026-05-12; CRQ0041229)
- CL-2026Q2-02: Introduced standardized financial calendar dimension DS-REF_DIM_CAL_2026; integrated across FA and RDO pipelines (Effective 2026-04-19; JIRA DPL-8129)
- CL-2026Q2-03: Harmonized instrument master keys to REF_INSTR_ID (previously INST_ID, INSTR_KEY variants) to improve field-level lineage joins (Effective 2026-06-07; SCTASK0102744)
- CL-2026Q2-04: Upgraded Collibra connector; enabled automated term propagation to Silver-Gold edges (Effective 2026-06-21; CHG0039756)

Operational metrics summary

- Ingestion Manifests Validated: 1,102 (100% of scheduled)
- Average End-to-End Lineage Graph Build Time: 14.9 minutes (SLA <= 20 minutes)
- Glossary Term Binding Success Rate: 98.7%
- Data Quality Checks Executed: 28,914; Failed: 63 (0.22%); Material: 0
- Documentation Artifacts Updated: 238 (linked to lineage nodes)

Ownership and accountability matrix (selected)

- Treasury Liquidity Domain Owner: FA Treasury Analytics (Owner: treas_ops@meridiancap.com)
- Market Risk Domain Owner: RDO Market Risk Data (Owner: mrisk_data@meridiancap.com)

- Regulatory Capital Domain Owner: RDO Regulatory Reporting (Owner: regcap_data@meridiancap.com)
- Shared Reference Data Owner: EDO Reference Data (Owner: refdata@meridiancap.com)
- Data Stewardship Leads: Named stewards per dataset (see dataset parameters per page 2 onward)

Execution steps recorded (for audit; not procedural guidance)

- Step 1: Harvested Airflow DAG metadata; mapped task-to-dataset bindings (2026-06-30T00:02:07Z)
- Step 2: Queried Snowflake INFORMATION_SCHEMA for dependency edges (2026-06-30T00:05:14Z)
- Step 3: Consolidated Databricks job run logs with Spark lineage events (2026-06-30T00:10:02Z)
- Step 4: Applied glossary term propagation and classification tags (2026-06-30T00:14:51Z)
- Step 5: Persisted graph deltas to Collibra and generated completeness score (2026-06-30T00:17:36Z)

Findings overview (quarterly)

- Finding FND-2026Q2-07: Residual lineage gap on DS-MRISK_GLD_PNL_DLY column ADJ_PNL due to intermediate SQL view without persistent metadata. Gap closed by adding transformation annotation (JIRA DPL-8342; Resolved 2026-06-26).
- Finding FND-2026Q2-11: Duplicate upstream mapping for DS-REGCAP_GLD_RWA by attribute EXPOSURE_TYPE; deduplicated via join key harmonization (SCTASK0103119; Resolved 2026-06-18).
- Finding FND-2026Q2-15: Five columns missing glossary term bindings in DS-TRES_GLD_CASH_POS; bindings completed (DPL-8394; Resolved 2026-06-28).

Attestations

- Preparedness Attestation: All in-scope datasets maintain traceability to sources-of-record or certified intermediates with stewardship identified.
- Data Control Attestation: No material exceptions identified; variances contained and remediated within defined SLAs.

Subject area lineage narrative -- Treasury Liquidity

Dataset parameters: DS-TRES_GLD_CASH_POS

- Dataset Name: Treasury Daily Cash Position (Gold)
- Dataset ID: DS-TRES_GLD_CASH_POS
- Domain: Treasury Liquidity
- Owner: FA Treasury Analytics
- Data Steward: J. Han (jhan@meridiancap.com)
- SLA: Available by 07:30 UTC, business days
- Classification: Internal (no direct PII)
- Primary Keys: BUSINESS_DATE, ACCOUNT_ID, CURRENCY
- Row Volume (Median Q2): 1.08M/day
- Consumers: Treasury Funding Desk, Liquidity Risk Dashboard, Regulatory Liquidity Coverage calculations

Upstream lineage overview (DS-TRES_GLD_CASH_POS)

- Upstream 1: DS-TRES_SLV_CASH_BAL (Silver); transformation: aggregation and currency normalization
- Upstream 2: DS-TRES_SRC_ODS11 (Operational Data Store feed); source-of-record for transactional balances
- Reference Link: DS-REF_DIM_CAL_2026 (calendar conformance); DS-REF_FX_RATES_DLY (FX normalization)
- Provenance Snapshot Tags: ODS11_SNAP_2026-06-30; FX_DLY_2026-06-29

Field-level lineage summary (selected columns)

- Column: END_OF_DAY_BALANCE
  - Source Path: DS-TRES_SRC_ODS11.balance_amt -> DS-TRES_SLV_CASH_BAL.eod_balance -> DS-TRES_GLD_CASH_POS.end_of_day_balance
  - Transform Reference: FIN-TRES-SPEC-014 v2.3 (sum by ACCOUNT_ID, CURRENCY, BUSINESS_DATE)
  - Quality Checks: Non-negative constraint; reconcile to bank statements variance threshold <= 0.5%
- Column: AVAILABLE_LIQUIDITY
  - Source Path: DS-TRES_SLV_CASH_BAL.eod_balance + DS-REF_FX_RATES_DLY.adj -> DS-TRES_GLD_CASH_POS.available_liquidity
  - Transform Reference: FIN-TRES-SPEC-022 v1.9 (currency normalization using daily close rates)
  - Quality Checks: Nullness < 0.1%; timeliness dependency on FX feed arrival by 06:00 UTC
- Column: LEGAL_ENTITY_ID
  - Source Path: DS-TRES_SLV_CASH_BAL.legal_entity_id (conformed to REF schema)
  - Steward Note: Conformance completed per CL-2026Q2-03; harmonized to LEI format

Operational lineage capture (Treasury pipeline) -- execution log entries

- Job: airflow.dag.treas_cash_gold_build
- Run ID: AR-TRG-20260630-01
- Tasks:
  - t1_extract_ods11 (2026-06-30T03:11:07Z to 03:15:22Z) -- Succeeded

    - t2_join_calendar (2026-06-30T03:15:23Z to 03:16:41Z) -- Succeeded
    - t3_fx_normalize (2026-06-30T03:16:42Z to 03:18:06Z) -- Succeeded
    - t4_gold_aggregate (2026-06-30T03:18:07Z to 03:22:19Z) -- Succeeded
    - t5_publish_lineage (2026-06-30T03:22:20Z to 03:23:18Z) -- Succeeded
- Counts:
    - Inbound Records (ODS11): 1,142,093
    - Outbound Records (Gold): 1,081,227
    - Record Attrition (by design; weekend/holiday pruning): 5.3%

Data quality outcomes (Treasury)

- Checks Executed: 4,116 (Q2 total)
- Failures: 9 (0.22%); Severity: Low
- Timeliness: 98.9% on-time availability; 3 instances delayed due to upstream FX reference file arriving at 06:12-06:17 UTC (INC0039217; minor schedule drift; closed 2026-06-14)
- Nullness: All critical fields within thresholds; peak nullness for LEGAL_ENTITY_ID at 0.06% during entity master refresh (SCTASK0102950; resolved)
- Reconciliation: Variance to bank statements averaged 0.08%; max 0.31% (within threshold)

Subject area lineage narrative -- Market Risk P&L

Dataset parameters: DS-MRISK_GLD_PNL_DLY

- Dataset Name: Market Risk Daily P&L (Gold)
- Dataset ID: DS-MRISK_GLD_PNL_DLY
- Domain: Market Risk
- Owner: RDO Market Risk Data
- Data Steward: S. Kapoor (skapoor@meridiancap.com)
- SLA: Available by 08:15 UTC, business days
- Classification: Internal (aggregated, tokenized identifiers)
- Primary Keys: BUSINESS_DATE, DESK_ID, INSTRUMENT_BUCKET
- Consumers: Risk Control Reports, Management P&L Bridge, Stress Testing

Upstream lineage overview (Market Risk)

- Upstream 1: DS-MRISK_SLV_PNL_EVENTS (trade-level events)
- Upstream 2: DS-REF_INSTRUMENT_MASTER (instrument attributes)
- Upstream 3: DS-REF_FX_RATES_DLY (FX normalization for non-USD trades)

Field-level lineage summary (selected columns)

- Column: RAW_PNL
    - Source Path: DS-MRISK_SLV_PNL_EVENTS.px_chg + carry components -> DS-MRISK_GLD_PNL_DLY.raw_pnl
    - Note: Mapping verified; adjustment labels aligned to glossary term PNL_COMPONENT
- Column: ADJ_PNL
    - Source Path: DS-MRISK_SLV_PNL_EVENTS.raw_pnl + adjustments from DS-MRISK_SLV_PNL_ADJ

    - Gap Status: Previously flagged (FND-2026Q2-07); added annotation on intermediate view MR_V_ADJ_01 (DPL-8342; resolved 2026-06-26)
- Column: DESK_ID
    - Source Path: DS-MRISK_SLV_PNL_EVENTS.desk_code -> conformed to DESK_ID using REF mapping table DS-REF_DESK_MAP

Operational lineage capture (Market Risk pipeline) -- execution log entries

- Job: airflow.dag.mrisk_gold_pnl_build
- Run ID: AR-MRG-20260630-01
- Tasks:
    - t1_read_events (2026-06-30T04:22:19Z to 04:29:05Z) -- Succeeded
    - t2_join_instrument (2026-06-30T04:29:06Z to 04:30:41Z) -- Succeeded
    - t3_fx_apply (2026-06-30T04:30:42Z to 04:33:58Z) -- Succeeded
    - t4_aggregate_pnl (2026-06-30T04:33:59Z to 04:38:12Z) -- Succeeded
    - t5_apply_adjustments (2026-06-30T04:38:13Z to 04:41:27Z) -- Succeeded
    - t6_publish_lineage (2026-06-30T04:41:28Z to 04:42:07Z) -- Succeeded
- Counts:
    - Inbound Event Records: 12,904,177
    - Adjustments Applied: 51,882
    - Outbound Aggregates: 74,312

Data quality outcomes (Market Risk)

- Checks Executed: 9,207 (Q2)
- Failures: 21 (0.23%); Severity: Low
- Notable Events:
    - View annotation missing for MR_V_ADJ_01 introduced lineage break (DPL-8342); no data impact; lineage continuity restored
    - Instrument attribute lag (REF refresh at 02:15 UTC) created 0.03% nulls in INSTRUMENT_BUCKET for 2026-05-03 (INC0038879; remediated within same day)

Subject area lineage narrative -- Regulatory Capital

Dataset parameters: DS-REGCAP_GLD_RWA

- Dataset Name: Regulatory Capital RWA Aggregates (Gold)
- Dataset ID: DS-REGCAP_GLD_RWA
- Domain: Regulatory Capital
- Owner: RDO Regulatory Reporting
- Data Steward: L. Ortega (lortega@meridiancap.com)
- SLA: Available by T+1 10:00 UTC
- Classification: Internal (aggregated)
- Primary Keys: REPORTING_DATE, EXPOSURE_TYPE, LEGAL_ENTITY_ID

Upstream lineage overview (Regulatory Capital)

- Upstream 1: DS-REGCAP_SLV_EXPOSURES (exposure-level facts)
- Upstream 2: DS-REF_RISK_WEIGHTS (regulatory mapping)
- Upstream 3: DS-REF_DIM_CAL_2026 (reporting calendar for quarter boundaries)

Field-level lineage summary (selected columns)

- Column: RWA_TOTAL
  - Source Path: DS-REGCAP_SLV_EXPOSURES.ead * DS-REF_RISK_WEIGHTS.rw -> aggregated by EXPOSURE_TYPE
  - Quality Checks: Aggregation completeness; cross-table referential integrity to REF weights
- Column: EXPOSURE_TYPE
  - Source Path: standardized using DS-REF_EXPOSURE_MAP (harmonization note CL-2026Q2-02)

Operational lineage capture (Regulatory Capital pipeline) -- execution log entries

- Job: airflow.dag.regcap_rwa_t1_build
- Run ID: AR-RCG-20260630-01
- Tasks:
  - t1_read_exposures (2026-06-30T05:12:05Z to 05:19:50Z) -- Succeeded
  - t2_join_rw (2026-06-30T05:19:51Z to 05:22:33Z) -- Succeeded
  - t3_aggregate_rwa (2026-06-30T05:22:34Z to 05:26:28Z) -- Succeeded
  - t4_publish_lineage (2026-06-30T05:26:29Z to 05:27:03Z) -- Succeeded
- Counts:
  - Inbound Exposures: 3,914,202
  - Outbound RWA Rows: 118,407

Quarterly issues and resolutions (selected, closed)

- Ticket: DPL-8342 (Lineage gap on MR_V_ADJ_01)
  - Opened: 2026-06-20T11:34:15Z; Closed: 2026-06-26T08:12:40Z
  - Impact: Lineage continuity only; no calculation error; resolved by adding persistent metadata annotation in pipeline catalog
- Ticket: SCTASK0103119 (Duplicate EXPOSURE_TYPE mapping)
  - Opened: 2026-06-12T07:22:01Z; Closed: 2026-06-18T15:05:58Z
  - Impact: Duplicated lineage edges; deduplication completed; final graph validated
- Ticket: INC0039217 (FX reference file arrival drift)
  - Opened: 2026-06-13T06:19:04Z; Closed: 2026-06-14T05:02:33Z
  - Impact: Minor timeliness variance; no downstream SLA breach

Completeness and coverage metrics by subject area (Q2)

- Treasury Liquidity: 97.8% column-level lineage mapped; 100% dataset-level ownership confirmed; 0 open items
- Market Risk: 95.1% column-level lineage mapped; 100% dataset-level ownership confirmed; 1 open curation item (see Backlog DPL-8426)
- Regulatory Capital: 96.7% column-level lineage mapped; 100% dataset-level ownership confirmed; 0 open items
- Shared Reference: 98.3% column-level lineage mapped; term coverage improved post harmonization

Open curation backlog (non-material; tracked to Q3)

- DPL-8426: Bind glossary term for ADJUSTMENT_CLASS on DS-MRISK_SLV_PNL_ADJ (Target: 2026-07-22)
- DPL-8453: Enhance field-level lineage for DS-REF_DIM_CAL_2026.additional_holiday_flags (Target: 2026-07-29)

Attachments and references (for subsequent pages)

- FIN-TRES-SPEC-014 v2.3 (Treasury aggregation specification)
- FIN-TRES-SPEC-022 v1.9 (FX normalization specification)
- MRISK-PNL-SPEC-005 v3.1 (Market Risk P&L adjustments)
- REGCAP-RWA-SPEC-011 v2.0 (RWA calculation aggregation rules)
- Collibra Asset IDs: A-TRES-GLD-001, A-MRISK-GLD-017, A-REGCAP-GLD-009
- Evidence Snapshots: Q2 lineage graph exports (June 30), DQS summary dashboard exports (monthly)

Attestation notes

- The above lineage, provenance, and quality summaries are evidence-backed via platform logs and metadata repositories. Next full recertification is scheduled for Q3 close (2026-10-07) under governance calendar entry GOVCAL-2026-10-EDO-02.

End of pages 1-2. Further pages provide detailed per-dataset lineage diagrams, field mapping matrices, and evidence extracts.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 3 -- Scope, Methodology, and Source System Inventory

This section defines the operational scope, approach, and inventory of systems included in Q2 2026 lineage verification. The objective is to provide a reproducible, auditable record of data origins, transformations, and hand-offs for key financial and risk data domains. Verification emphasizes completeness of lineage edges, consistency of dataset metadata, and the operational integrity of control points (e.g., schema checks, reconciliation gates).

Quarter parameters

- Report ID: DLP-Q226-MC-003
- Compilation window: 2026-07-04T12:00Z to 2026-07-08T18:00Z
- Reporting period covered: 2026-04-01 through 2026-06-30 (UTC)
- Lineage graph build ID: LG-Q226-001 (generated by EDG Atlas 4.12.3)
- Provenance sample size: 200 records per dataset (stratified by business unit)
- Hashing method for provenance keys: per EDG Standard DG-PRV-07 (cryptographic, deterministic)
- Ticket references used to anchor scope: MC-DATA-45231, CHG-2026-05-1345, INC-2026-06-01873, RISK-ENG-2280
- Teams responsible: Enterprise Data Governance (EDG), Data Platform Operations (DPO), Finance Data Services (FDS), Risk Data Engineering (RDE), Market Data Services (MDS), BI Solutions (BIS)

Source system coverage inventory (Q2 snapshot: 2026-06-30T23:59Z)

- Domain: Trading
  - System code: TRD-OMS-A
  - Steward team: RDE
  - Primary datasets: TRD_EXEC_RAW.v3; TRD_ENRICH_D.v2
  - Average daily records: 12.4M
  - Data classification: Internal Operational
  - Storage tier: Curated Lake (S3-equivalent), EU-Central logical zone
  - Schema version: 3.14.2 (TRD_EXEC_RAW), 2.6.0 (TRD_ENRICH_D)
  - Last full refresh: 2026-06-30T02:10Z
- Domain: Market Data
  - System code: MDS-TICK
  - Steward team: MDS
  - Primary datasets: MKT_PRICES_D.v5; FX_RATES_EOD.v7
  - Average daily records: 98.7M
  - Data classification: External Licensed
  - Storage tier: Curated Lake + Vaulted History
  - Schema version: 5.2.1 (MKT_PRICES_D), 7.0.8 (FX_RATES_EOD)
  - Last full refresh: 2026-06-30T00:30Z

- Domain: Finance
  - System code: FIN-GL
  - Steward team: FDS
  - Primary datasets: FIN_GL_SNAP_D.v7; COST_CENTER_REF.v4
  - Average daily records: 3.1M
  - Data classification: Confidential Financial
  - Storage tier: Warehouse (Snowflake-equivalent)
  - Schema version: 7.9.3 (FIN_GL_SNAP_D), 4.3.0 (COST_CENTER_REF)
  - Last full refresh: 2026-06-30T05:45Z
- Domain: Risk
  - System code: RISK-VAL
  - Steward team: RDE
  - Primary datasets: VAL_POSITION_D.v5; RISK_FACTORS_D.v6
  - Average daily records: 2.7M
  - Data classification: Internal Sensitive
  - Storage tier: Compute-optimized warehouse
  - Schema version: 5.7.1 (VAL_POSITION_D), 6.4.5 (RISK_FACTORS_D)
  - Last full refresh: 2026-06-30T04:20Z
- Domain: Client
  - System code: CLNT-CRM
  - Steward team: Client Analytics Engineering (CAE)
  - Primary datasets: CLIENT_MASTER.v8; KYC_STATUS.v3
  - Average daily records: 0.5M
  - Data classification: Personal Data (minimized)
  - Storage tier: Curated Lake with tokenization layer
  - Schema version: 8.1.0 (CLIENT_MASTER), 3.2.2 (KYC_STATUS)
  - Last full refresh: 2026-06-30T03:40Z

Methodology summary

- Lineage graph construction: Automated extraction of operational metadata from orchestration logs (Airflow 2.9), warehouse query history, and transform specifications (dbt 1.7 projects), consolidated in EDG Atlas 4.12.3. Manual attestations were obtained for five edge cases where automated discovery lacked coverage (see tickets EDG-ATTEST-5521 through -5525).
- Provenance verification: For each in-scope dataset, 200 records were sampled per business unit stratification. Record-level provenance keys were recalculated and matched to upstream keys to confirm deterministic joins and transformations in non-lossy nodes.
- Control validation: Schema fingerprints, row-count reconciliations, nullability audits, and referential integrity checks were run at control gates defined in Control Library CL-STD-09.

Runbook excerpt: Quarterly lineage verification cycle (executed by EDG/DPO)

- Step: Initialize scope
  - Owner: EDG
  - Timestamp: 2026-07-04T12:05Z
  - Artifact ID: SCOPE-Q226-02
  - Action: Lock dataset list and freeze schema baselines
  - Outcome: Approved (EDG lead sign-off)
- Step: Extract operational metadata
  - Owner: DPO
  - Timestamp: 2026-07-04T14:20Z
  - Artifact ID: META-EXTRACT-TRD-019
  - Action: Pull orchestration run logs for 2026 Q2
  - Outcome: Completed (14 sources, 0 errors)
- Step: Build lineage graph
  - Owner: EDG
  - Timestamp: 2026-07-05T09:10Z
  - Artifact ID: LG-Q226-001
  - Action: Materialize graph nodes/edges in Atlas
  - Outcome: Completed (8,412 nodes; 22,903 edges)
- Step: Execute provenance sampling
  - Owner: EDG
  - Timestamp: 2026-07-06T08:30Z
  - Artifact ID: PRV-SAMPLE-226-TRD
  - Action: Compute and compare provenance keys
  - Outcome: 100% match rate for non-aggregating nodes; 99.6% for aggregations
- Step: Validate control gates
  - Owner: DPO
  - Timestamp: 2026-07-06T15:00Z
  - Artifact ID: CTRL-VAL-GL-07
  - Action: Re-run control suite CL-STD-09 on sampled days
  - Outcome: Passed (see Metrics summary)

Metrics summary (Q2)

- Lineage completeness (edge presence): 99.2% (+0.3pp QoQ) -- Source: Atlas completeness report LG-Q226-001
- Provenance match rate (record-level): 99.8% (+0.1pp QoQ) -- Source: PRV-SAMPLE-AGG
- Control gate pass rate: 98.9% (+0.2pp QoQ) -- Source: CTRL-VAL consolidated
- Mean orchestration latency (DAG completion): 37m (-3m QoQ) -- Source: Airflow run history
- Dataset schema drift incidents: 2 (-1 QoQ) -- Source: INC register

Assumptions and limitations

- Only production pathways were in scope; ad-hoc analytical sandboxes and user extracts remain out of scope. Intermediate caches that do not alter data were documented as passthrough nodes.
- Vendor market data licensing constraints require obfuscation of source vendor identifiers; lineage captures internal staging names only.
- Client master lineage includes tokenization and masking stages; underlying token regimes are governed by separate security controls and are not reproduced here.

Ticket cross-references

- MC-DATA-45231: Q2 scope confirmation and inventory lock (approved 2026-07-03 by EDG)
- CHG-2026-05-1345: Deployment of dbt model set DP-FIN-v7.9 (impacts FIN_GL_SNAP_D.v7 lineage)
- INC-2026-06-01873: Delayed MKT_PRICES_D.v5 partition 2026-06-12 (impact assessed; no lineage break)
- RISK-ENG-2280: Schema update to VAL_POSITION_D.v5 (new column risk_adj_factor; backward compatible)

Page 4 -- End-to-End Lineage Narratives for Key Objects

This page summarizes end-to-end lineage for representative, business-critical datasets, emphasizing hop-by-hop provenance, transformation purpose, and control outcomes. Narratives are corroborated by Atlas graph LG-Q226-001 and Q2 run artifacts.

KPI object: Daily P&L by Desk (PNL_DESK_D.v4)

Narrative

PNL_DESK_D.v4 is produced daily at 06:10Z by the Finance Data Services (FDS) pipeline. Upstream sources include executed trades, enriched trade attributes, end-of-day market data, and position-level valuations. The flow consolidates trade- and position-level measures into desk-level aggregates that feed finance reporting and BI dashboards.

Lineage hops (2026-06-30 cycle)

- Hop 1
  - Upstream dataset: TRD_EXEC_RAW.v3
  - Transform job ID: DAG.TRD_ENRICH.v2.17 (Run 2026-06-30T01:12Z)
  - Logic summary: Standardize fields; attach instrument, desk, and book reference data
  - Control: Schema fingerprint check FP-TRD-3.14.2; nullability audit on trade_id
  - Output dataset: TRD_ENRICH_D.v2
  - Checksum/schema: SCH-2.6.0; Sample row count 12.3M; Control outcome: Pass
- Hop 2
  - Upstream dataset: TRD_ENRICH_D.v2, MKT_PRICES_D.v5, FX_RATES_EOD.v7
  - Transform job ID: DAG.VAL_POSITION.v5.08 (Run 2026-06-30T03:05Z)
  - Logic summary: Revaluation of positions; FX normalization to USD
  - Control: Price currency coverage check; referential integrity on instrument_id
  - Output dataset: VAL_POSITION_D.v5
  - Checksum/schema: SCH-5.7.1; Sample row count 2.8M; Control outcome: Pass with 0.02% FX fallback usage
- Hop 3
  - Upstream dataset: VAL_POSITION_D.v5, COST_CENTER_REF.v4
  - Transform job ID: DAG.PNL_AGG_DESK.v4.22 (Run 2026-06-30T05:20Z)
  - Logic summary: Aggregate realized/unrealized P&L by desk and currency; attach cost center attribution
  - Control: Aggregation reconciliation (sum of desk equals total P&L); primary key uniqueness (desk_id, as_of_date)
  - Output dataset: PNL_DESK_D.v4
  - Checksum/schema: SCH-4.8.2; Sample row count 1,742; Control outcome: Pass

Provenance sample verification (PNL_DESK_D.v4)

- Sample size: 200 desk-date records

- Provenance key match rate: 100% to upstream VAL_POSITION_D.v5 aggregates
- Anomalies: None observed; rounding policy consistent with FIN-STD-RND-02

Regulatory metric input: Liquidity Coverage Ratio input feed (LCR_INPUT_D.v3)

Narrative

LCR_INPUT_D.v3 assembles high-quality liquid asset (HQLA) balances and net cash outflows from Finance GL snapshots and Treasury liquidity positions. The daily 07:05Z batch serves regulatory reporting and internal liquidity monitoring.

Lineage hops (2026-06-29 cycle)

- Hop 1
  - Upstream dataset: FIN_GL_SNAP_D.v7
  - Transform job ID: DAG.GL_CLASSIFY.v7.11 (Run 2026-06-29T05:12Z)
  - Logic summary: Map GL accounts to liquidity buckets per policy FIN-LIQ-CLASS-03
  - Control: Mapping coverage (>= 99.5% accounts classified); unmapped routed to review queue
  - Output dataset: GL_LIQ_CLASS_D.v7
  - Checksum/schema: SCH-7.9.3a; Coverage: 99.83%; Control outcome: Pass
- Hop 2
  - Upstream dataset: GL_LIQ_CLASS_D.v7, TREASURY_POS_D.v4
  - Transform job ID: DAG.LCR_ASSEMBLY.v3.06 (Run 2026-06-29T06:18Z)
  - Logic summary: Consolidate HQLA and outflows; apply haircuts per instrument class
  - Control: Haircut rule version check HR-2026Q2; reconciliation to GL totals +/-0.05%
  - Output dataset: LCR_INPUT_D.v3
  - Checksum/schema: SCH-3.6.0; Reconciliation variance: 0.03%; Control outcome: Pass

Incident log excerpts impacting lineage (Q2)

- Incident ID: INC-2026-06-01873
  - Date/time: 2026-06-12T00:55Z
  - Impacted dataset: MKT_PRICES_D.v5
  - Symptom: Partition 2026-06-11 delayed by 42 minutes
  - Root cause: Vendor late delivery
  - Mitigation: Downstream DAG.VAL_POSITION.v5 start-time window adjusted for one cycle
  - Residual risk: None; lineage edges intact; SLA breach documented
- Incident ID: INC-2026-05-00944
  - Date/time: 2026-05-23T03:22Z
  - Impacted dataset: CLIENT_MASTER.v8
  - Symptom: Schema drift alert (optional column legal_form_code added)
  - Root cause: Upstream CRM release
  - Mitigation: dbt model downstream configured with permissive column selection

    - Residual risk: None; non-breaking change; lineage updated (edge metadata v8.1.0)

Change requests (CRs) with lineage effect (executed successfully)

- CHG-2026-04-1207
    - Effective date: 2026-04-15
    - Scope: Introduce risk_adj_factor to VAL_POSITION_D.v5
    - Teams: RDE, EDG
    - Validation: Backward compatibility confirmed; lineage node annotations updated
    - Evidence: Test run DAG.VAL_POSITION.v5.06 (2026-04-13T02:50Z) -- Pass
- CHG-2026-05-1345
    - Effective date: 2026-05-28
    - Scope: Deploy FIN_GL_SNAP_D.v7 model set DP-FIN-v7.9
    - Teams: FDS, DPO, EDG
    - Validation: Reconciliation variance within +/-0.05%; schema fingerprint updated
    - Evidence: CTRL-VAL-GL-07 (2026-05-29T06:00Z) -- Pass

Control gate outcomes (selected)

- Gate ID: CTRL-RI-TRD-02
    - Dataset: TRD_ENRICH_D.v2
    - Check: Referential integrity on instrument_id vs. REF_INSTRUMENTS.v6
    - Result: 100% keys matched over sample days 2026-06-10, 2026-06-20, 2026-06-30
- Gate ID: CTRL-AGG-PNL-01
    - Dataset: PNL_DESK_D.v4
    - Check: Sum of desk P&L equals enterprise total P&L
    - Result: Difference 0.00% on 2026-06-30; 0.01% on 2026-06-28 (below threshold)
- Gate ID: CTRL-MAP-LIQ-03
    - Dataset: GL_LIQ_CLASS_D.v7
    - Check: Classification coverage and version lock to FIN-LIQ-CLASS-03
    - Result: Coverage >= 99.8% across June; version lock consistent

Summary of lineage confidence (object-level, Q2)

- PNL_DESK_D.v4: Confidence High (99.4%) -- Complete edges, controls passed, stable schemas
- LCR_INPUT_D.v3: Confidence High (99.2%) -- Controls passed; minor timing dependencies recorded
- VAL_POSITION_D.v5: Confidence Medium-High (98.7%) -- One-time FX rate fallback within tolerance

Attestations

- EDG review: Completed 2026-07-07T16:30Z by EDG Lead (Ref: EDG-REV-226-09)
- Steward confirmations: FDS (PNL, GL), RDE (VAL), MDS (market data) -- Received 2026-07-08T10:05Z

- Exceptions: None open at period close; two informational watch items logged for Q3 follow-up (EDG-WATCH-3112, -3113)

End of pages 3-4.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 5

2. Lineage Scope and Q2 Changes -- Asset Servicing Receivables (ASR)

This section summarizes end-to-end lineage for the Asset Servicing Receivables (ASR) domain across Q2 2026, including upstream source systems, transformation assets, and curated outputs used by Finance, Treasury, and Regulatory Reporting. The scope covers ingestion, standardization, conformance, enrichment, and publication flows executed by the Enterprise Data Platform (EDP) and consumed by downstream analytics marts.

ASR data originates from two upstream systems: Core Custody (CUS) and Corporate Actions Processing (CAP). Ingestion is executed as scheduled batch interfaces on business days (T+1 windows), landing into managed staging, then conformed and enriched with reference data maintained by the Master Data Management (MDM) platform. Curated outputs feed the Finance Ledger Mart (FLM) and the Treasury Liquidity Mart (TLM). The lineage model registers each logical hop with versioned transformation artifacts (dbt models, Spark notebooks) and standardized metadata per the Data Governance Office (DGO) lineage schema v3.4.

Lineage Segment Registry Entries (selected, active in Q2)

- Segment ID: ASR-SG-001

Owner: Finance Data Ops (FDO)

Upstream Source: CUS-Receivables-Export (Interface ID: CUS-AR-05)

Downstream Target: MC_EDP_PRD.STG.ASR_CUS_AR_STG

Transform Artifacts: Ingest Profile IP-042; Validation Ruleset VR-209

Effective Dates: 2025-11-03 to Present

- Segment ID: ASR-SG-004

Owner: Enterprise Data Platform (EDP)

Upstream Source: MC_EDP_PRD.STG.ASR_CUS_AR_STG

Downstream Target: MC_EDP_PRD.CONF.ASR_CONFORMED

Transform Artifacts: dbt model asr_conformed_v12; Mapping Spec MS-AR-2026-02

Effective Dates: 2026-02-14 to Present

- Segment ID: ASR-SG-009

Owner: Risk Analytics (RA)

Upstream Source: MC_EDP_PRD.CONF.ASR_CONFORMED

Downstream Target: MC_EDP_PRD.CUR.TREASURY_LIQUIDITY_AUX

Transform Artifacts: Spark job TJ-4518; Enrichment Rules ER-TLM-33 (GL mapping)

Effective Dates: 2026-03-27 to Present

- Segment ID: ASR-SG-012

Owner: Finance Data Ops (FDO)

Upstream Source: MC_EDP_PRD.CONF.ASR_CONFORMED

Downstream Target: MC_FIN_PRD.CUR.FIN_LEDGER_AR

Transform Artifacts: dbt model fin_ledger_ar_v7; Posting Rules PR-118

Effective Dates: 2026-04-09 to Present

Operational Parameters -- ASR Batch Ingestion (CUS and CAP)

- Schedule Window (UTC): 02:00-03:15 daily on T+1 business days
- Orchestration Job IDs: JS-EDP-SKD-45528 (CUS), JS-EDP-SKD-45567 (CAP)
- Data Volume (median Q2): CUS 12.6M rows/day; CAP 4.1M rows/day
- Ingestion Control Set: IC-AR-Q2-2026 (file completeness, row count thresholds, schema checksum)
- Upstream Data Contracts: DC-CUS-AR-2026.1, DC-CAP-AR-2026.2
- Stewardship Contacts: DGO-ASR-Steward-Group (primary), FDO-AR-Owners (secondary)

Change Management -- Q2 Relevant Tickets

- MC-DGO-2145 (Opened 2026-04-08, Resolved 2026-04-16)

Subject: Introduce new attribute "settlement_route_code" in ASR_CONFORMED

Outcome: Field added as nullable; lineage mapping established from CAP export v3.1; downstream consumers notified via Change Advisory Notice CAN-2026-AR-07.

- EDP-OPS-9328 (Opened 2026-05-03, Resolved 2026-05-06)

Subject: Adjust row count variance thresholds due to seasonal volume spike post-dividend cycle

Outcome: Upper variance threshold increased from +12% to +20% for CAP flows; control evidence attached to CAB-2026-05-041.

- FDO-FIN-7719 (Opened 2026-06-10, In Progress)

Subject: Harmonize GL account mapping for non-cash adjustments

Outcome: Pending patch to ER-TLM-33; associated lineage update planned for 2026-07-02 release window.

Q2 Run Summary -- ASR Core Metrics (2026-04-01 to 2026-06-30)

- Successful End-to-End Runs: 63/63 business days (100%)
- Average End-to-End Duration: 52m 14s
- Control Check Pass Rate: 99.4% (minor warnings on schema optionality)
- Data Volume Processed: 1.04B rows (CUS + CAP combined)
- Data Quality Exceptions Raised: 14 (all informational; no blocking severities)
- Lineage Completeness Score: 98.7% (2 newly introduced attributes pending downstream mapping finalization)

Selected Run Log -- 2026-06-14 (UTC)

- 02:00:03 JS-EDP-SKD-45528 START CUS ingestion batch AR-05; Parameters: business_date=2026-06-13; file_set=3
- 02:04:57 VR-209 validation PASS; row_count=12,874,326; null_rate[customer_id]=0.00%; null_rate[receivable_amt]=0.00%
- 02:06:11 Landing to MC_EDP_PRD.STG.ASR_CUS_AR_STG COMPLETE; checksum=bf4c:ok
- 02:08:22 JS-EDP-SKD-45567 START CAP ingestion batch AR-07; row_count=4,318,552

- 02:12:41 Schema conformance (asr_conformed_v12) START; mapping set MS-AR-2026-02
- 02:28:09 Conformance COMPLETE; output MC_EDP_PRD.CONF.ASR_CONFORMED; rows=17,192,878; warnings=2 (optional field settlement_route_code 0.3% populated)
- 02:34:27 Enrichment ER-TLM-33 START; referential joins to MDM.GL_ACCOUNT_DIM v2026.05
- 02:46:17 Enrichment COMPLETE; output MC_EDP_PRD.CUR.TREASURY_LIQUIDITY_AUX; rows=17,192,878; unmatched_gl_key=0.06% (flagged informational)
- 02:52:21 Publication to MC_FIN_PRD.CUR.FIN_LEDGER_AR COMPLETE; postings_created=1,249,331; zero-amt-filtered=0.21%
- 02:53:02 End-to-End RUN STATUS: SUCCESS; duration=52m 59s

Data Quality Metrics -- ASR_CONFORMED (Q2 aggregates)

- Completeness (non-null critical fields): customer_id 100.00%; receivable_amt 100.00%; currency_code 100.00%
- Validity (domain conformance): currency_code in ISO set 100.00%; receivable_type in [PRINCIPAL, FEE, ADJ] 99.98% (42 exceptions corrected by rule VR-209)
- Timeliness (file arrival within SLA): 99.2% within window; 0.8% late but within grace (no downstream impact)
- Uniqueness (composite key customer_id + invoice_id + effective_date): 99.9997%; duplicates=3 (quarantined; resolved via FDO-FIN-7651)

Observations and Findings

- The addition of settlement_route_code introduced a minor mapping lag to the Treasury Liquidity Mart. CAP upstream populated the field for select cross-border events; CUS will follow in Q3 per upstream roadmap. Interim handling is nullable, with DGO confirming the lineage annotation status as "Provisional Mapping" under MC-DGO-2145.
- Seasonal dividend cycles in May increased CAP volumes by up to 18%, triggering near-threshold variance alerts. EDP adjusted thresholds under EDP-OPS-9328 with DGO sign-off; post-change monitoring shows no false negatives in anomaly detection.
- Enrichment ER-TLM-33 exhibited a small rate of unmatched GL keys tied to new product subtypes introduced in late June. Risk is assessed as low; pending enhancement under FDO-FIN-7719 will extend the mapping table and close the lineage gap for these subtypes.

Accountability and Stewardship

- Data Owners: FDO-ASR (business), EDP-Data-Platform (technical)
- Data Stewards: DGO-ASR-Steward-Group
- Review Cadence: Weekly lineage checkpoint (Tuesdays 14:00 UTC), Quarterly governance review completed 2026-06-25 (minutes filed under GOV-MIN-2026Q2-AR)

Page 6

3. End-to-End Trace -- Trade Capture to Regulatory Transaction Reporting (RTR)

The following is a detailed trace of the lineage from Trade Capture through Regulatory Transaction Reporting (RTR) for business date 2026-06-14. The flow covers ingestion from Front Office Trade Capture (FOTC), normalization, enrichment, eligibility assessment, and publication to the RTR outbound topic and regulatory filing store. The scope is read-only and reflects observed operations and registered lineage, with identifiers masked where appropriate.

Trace Parameters

- Business Date: 2026-06-14
- Trace Window (UTC): 01:30-04:10
- Record Sample Key (hashed): 3a9f...e41c (internal trace token TRC-RTR-2026-06-14-1172)
- Product: Equity Swap
- Venue: VN-EMEA-004 (off-venue bilateral)
- Counterparty Class: FC (Financial Counterparty)
- Jurisdiction Routing: EEA RTR primary, UK RTR secondary (per static routing table v2026.06)

Logical Stages and Artifacts

- Stage: Ingestion

Source: FOTC daily snapshot (FOTC-TRD-SNAP-15)

Target: MC_EDP_PRD.STG.TRD_RAW

Orchestration: JS-EDP-SKD-46201

Controls: IC-TRD-Q2-2026 (file completeness, duplication check)

Start/End: 01:31:07 / 01:38:54

- Stage: Normalization

Orchestration: JS-EDP-SKD-46377

Start/End: 02:48:09 / 03:06:27

Operational Timeline (UTC) -- 2026-06-14

- 01:31:07 Ingestion START; row_count=8,642,119; completeness PASS
- 01:38:54 Ingestion COMPLETE; checksum ok; duplicates=0.00%
- 01:41:12 Normalization START; conformance rules MS-TRD-2026-04
- 01:56:45 Normalization COMPLETE; rows=8,641,972; dropped=147 (header/test records per contract)
- 02:01:03 Enrichment START; joins to MDM dimensions and holiday calendar
- 02:19:26 Enrichment COMPLETE; rows=8,641,972; cpty_resolved=99.998%; instr_resolved=100.00%
- 02:23:51 Eligibility START; jurisdictional routing evaluation
- 02:34:18 Eligibility COMPLETE; eligible=5,474,209; not_eligible=3,167,763 (out-of-scope jurisdictions/thresholds)
- 02:48:09 Publication START; package count=2 (EEA primary, UK secondary)
- 03:06:27 Publication COMPLETE; EEA submissions=5,101,884; UK submissions=372,325; archive write PASS
- 03:12:40 Post-publish reconciliation COMPLETE; outbound vs. curated parity delta=0.00002% (2 records re-queued)
- 04:10:03 Daily RTR mart refresh COMPLETE; downstream availability confirmed

Record-Level Provenance (Sample Token 3a9f...e41c)

- Source Event: FOTC trade_id TID-8c...a1; captured 2026-06-14T00:56:12Z; action NEW
- Normalization: Field standardization applied; trade_action=INSERT; price converted to base ccy using FX feed v2026.06 daily
- Enrichment: Counterparty resolved to CPTY_KEY=K-742913; LEI matched; instrument resolved to INSTR_KEY=I-338172; holiday-adjusted settlement_date set to 2026-06-18
- Eligibility: EEA scope TRUE; commodity/EMIR criteria applied; threshold checks PASS
- Publication: Routed to EEA package PKG-EEA-2026-06-14-02; submission_id S-EEA-7842291; archive pointer ARC-2026-06-14-EEA-02-7842291

RTR Flow Metrics -- Q2 Aggregates

- Average Daily Trades Ingested: 8.3M
- Eligibility Rate (avg): 63.4% (jurisdictional scopes and thresholds)
- Counterparty Resolution: 99.996% (residuals due to late LEI updates)
- Instrument Resolution: 100.00%

- Timeliness: 99.7% within SLA; 0.3% within grace window
- Publication Re-queue Rate: 0.002% (network/transient write retries; automatically reconciled)

Data Quality Checks -- Summary for 2026-06-14

- Required Fields Completeness: PASS (trade_id, trade_date, quantity, price, ccy)
- Referential Integrity: PASS (counterparty and instrument keys)
- Business Rules: PASS (notional thresholds, product taxonomy alignment)
- Duplicate Detection: PASS (no duplicates across composite key: venue + trade_id + trade_timestamp)
- Anomaly Detection: WARN (minor spike in FC counterparty class post-02:00; within tolerance; reviewed by Risk Analytics)

Change Log and Governance References

- RTR-OPS-2204 (Opened 2026-04-22, Resolved 2026-05-02)

Subject: Update eligibility rules for revised EEA thresholds

Outcome: Rulepack v7 deployed 2026-05-02; lineage documentation updated; training completed for RTR operators.

- DGO-LIN-1987 (Opened 2026-05-29, Resolved 2026-06-05)

Subject: Align trade action vocab with enterprise standard (NEW, AMEND, CANCEL)

Outcome: Normalization model v18 reflects new vocab; backward compatibility retained; lineage impact minimal.

- PRE-PLAT-5531 (Opened 2026-06-12, Resolved 2026-06-14)

Subject: Orchestration scheduler failover drill

Outcome: No impact to RTR batch; evidence attached to audit record AUD-PLAT-2026Q2-13.

Outstanding Items (as of 2026-06-30)

- RA-RTR-1179: Evaluate enrichment for collateralization flag across OTC equity derivatives; dependency on MDM attribute rollout v2026.07.
- DGO-RTR-1203: Complete lineage annotations for two derived eligibility fields introduced in Rulepack v7 (documentation in progress; functional behavior validated).

Accountability and Review

- Data Owners: Capital Markets Front Office (business), EDP Data Services (technical)
- Data Stewards: DGO-RTR-Steward-Group
- Review Cadence: Weekly RTR lineage review (Wednesdays 15:00 UTC); Q2 governance review held 2026-06-26 (minutes GOV-MIN-2026Q2-RTR)
- Audit References: AUD-RTR-2026Q2-01 (lineage trace evidence), AUD-RTR-2026Q2-02 (control execution evidence)

Observations

- The RTR flow achieved consistent SLA adherence in Q2 with low re-queue rates. Minor WARN events aligned with known product cycle volatility and were reviewed without requiring remediation. Lineage coverage is comprehensive, with two newly introduced derived fields pending final metadata annotation. No material data

quality issues or reporting delays were recorded during the period.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 7

Section 3. Source Feed Inventory -- Operational Status (Q2 2026)

This section summarizes the active source-system feeds under Enterprise Data Governance (EDG) scope that contribute to the Core Financial Data Lake (CFDL) lineage for the quarter. Feeds listed below were validated for schema consistency, SLA adherence, and lineage tag propagation across landing, bronze, silver, and consumer layers. During Q2 2026, the Data Engineering (DE) team, in coordination with Institutional Operations (IO) and Risk Analytics (RA), executed routine feed certification and schema drift reviews per EDG-STD-014. No material lineage gaps were identified; minor mapping clarifications were logged and closed.

Feed Registration Parameters (as of 2026-06-28T23:59:00Z)

- Feed Name: CRM_ACCOUNT_MASTER
  - Feed ID: CFDL.FD.00123
  - Source System: Siebel CRM (US-East Cluster A)
  - Owner Team: Client Data Services (CDS)
  - Frequency: Hourly (xx:10 past the hour)
  - Contracted SLA: Delivery within T+00:20 of hour
  - Format/Protocol: Avro over SFTP (AES256 at-rest), schema registry v1.12
  - Current Schema Version: CRM_ACC_4.2
  - Lineage Tag: LT-CRM-ACCT-2026Q2
  - Last Change Ticket: CHG0038427 (field length harmonization for phone_country_code)
  - Last Successful Run: 2026-06-30T21:10:45Z
  - Exceptions Q2: 2 transient delays (INC0065120, INC0065877), auto-recovered

- Feed Name: CORE_LEDGER_JOURNAL
  - Feed ID: CFDL.FD.00008
  - Source System: GLX (Core Ledger v11.4)
  - Owner Team: Financial Control Technology (FCT)
  - Frequency: Daily EOD (22:30 UTC)
  - Contracted SLA: T+01:30 ingest complete
  - Format/Protocol: Parquet over secure object replication
  - Current Schema Version: GLJ_2.9
  - Lineage Tag: LT-GL-JOURNAL-2026Q2
  - Last Change Ticket: CHG0037991 (add field journal_source_ref)
  - Last Successful Run: 2026-06-30T22:47:03Z
  - Exceptions Q2: 0

- Feed Name: MARKET_TRADE_FEED
  - Feed ID: CFDL.FD.00057
  - Source System: Trade Capture (TCS Equities v7.6)

    - Owner Team: Front Office Technology (FOT)
    - Frequency: Near-real-time (sub-minute), batch close at 21:00 UTC
    - Contracted SLA: 99.5% messages < T+30s; batch close T+00:20
    - Format/Protocol: Kafka (topic: tcs.equities.trade.v3), Avro with schema registry v1.12
    - Current Schema Version: EQ_TRD_3.5
    - Lineage Tag: LT-TRD-EQ-2026Q2
    - Last Change Ticket: CHG0038610 (introduce optional mic_code)
    - Last Successful Run: 2026-06-30T21:00:22Z (batch close)
    - Exceptions Q2: 1 message replay window extension (INC0066019), resolved

- Feed Name: REF_DATA_CCY_RATES
    - Feed ID: CFDL.FD.00031
    - Source System: Market Data Hub (MDH)
    - Owner Team: Market Data Services (MDS)
    - Frequency: Hourly and EOD conformed set at 20:00 UTC
    - Contracted SLA: Hourly T+00:10; EOD T+00:15
    - Format/Protocol: REST pull to landing (JSON), normalized to Parquet
    - Current Schema Version: FX_REF_1.7
    - Lineage Tag: LT-REF-FX-2026Q2
    - Last Change Ticket: CHG0037749 (precision increase for mid_rate)
    - Last Successful Run: 2026-06-30T20:00:09Z

    - Exceptions Q2: 1 late arrival (INC0065243), within SLA window

Ingestion and Transformation Pipeline Overview (Q2 2026)

Standardized ingestion follows the Landing -> Bronze -> Silver -> Consumer pattern within the CFDL. The Platform Engineering (PE) team maintains the ingestion orchestrator (Aurum v2.3) with lineage capture via OpenLineage v1.6. Across the quarter, CDC enablement was applied to CRM_ACCOUNT_MASTER and MARKET_TRADE_FEED to improve late-arrival tolerance and change visibility. No production rollbacks occurred.

Pipeline Execution Summary

- Orchestrator: Aurum v2.3.14
- Lineage Collector: OpenLineage Agent 1.6.2
- Storage Tiers: S3/cfdl-landing, S3/cfdl-bronze, Delta Lake (silver/consumer)
- Job Families: ingest_standard_v4, transform_conform_v3, publish_consumer_v2
- Change Window References: CAB-2026-05-WK2 (approved), CAB-2026-06-WK4 (approved)

Step Execution Metrics (Aggregate; Apr-Jun 2026)

- Step: Ingest (Landing->Bronze)
  - Total Runs: 9,186
  - Median Latency: 3m 12s
  - P95 Latency: 7m 58s
  - Failure Rate: 0.19% (auto-retry success 100%)
  - Volume Ingested: 41.7 TB (compressed)
- Step: Standardize (Bronze Schema Align)
  - Total Runs: 9,042
  - Median Latency: 2m 27s
  - P95 Latency: 5m 11s
  - Failure Rate: 0.12%
  - DQ Rules Executed: 126,534
- Step: Conform (Silver Business Model)
  - Total Runs: 4,506
  - Median Latency: 7m 49s
  - P95 Latency: 14m 20s
  - Failure Rate: 0.15%
  - DQ Rules Executed: 208,998
- Step: Publish (Consumer/Marts)
  - Total Runs: 2,219
  - Median Latency: 4m 06s
  - P95 Latency: 9m 03s
  - Failure Rate: 0.09%
  - Consumer Targets: Risk PnL Mart, Finance Mart, Compliance Mart

Data Quality Outcomes by Stage (Q2 2026)

Data quality controls executed across stages included completeness, conformance, referential integrity, uniqueness, and threshold/range validations. All controls were parameterized within the lineage framework to bind rule results to specific dataset versions.

DQ Pass/Observation Summary

- Completeness (non-null critical fields): 99.94% pass rate

- Conformance (type/format): 99.97% pass rate
- Referential Integrity (FK checks to reference data): 99.89% pass rate
- Uniqueness (business keys): 99.96% pass rate
- Threshold/Range (currency rates, trade quantities): 99.92% pass rate

Top Observations (Closed)

- Observation: Occasional null phone_country_code in CRM_ACCOUNT_MASTER post field-length change
  - Ticket: MRC-DL-2879
  - Detected: 2026-05-04T02:11:19Z
  - Resolution: Upstream mapping corrected by CDS; validated 2026-05-06
  - Impact: 0.03% of records; no downstream consumer impact
- Observation: Rare MIC code missing in MARKET_TRADE_FEED during optional field rollout
  - Ticket: MRC-DL-2913
  - Detected: 2026-06-12T18:42:03Z
  - Resolution: FOT added default mapping based on venue_id; validated 2026-06-14
  - Impact: 0.004% of trades; downstream enrichment handled
- Observation: FX mid_rate precision mismatch warning after REF_DATA_CCY_RATES precision increase
  - Ticket: MRC-DL-2831
  - Detected: 2026-04-21T20:05:11Z
  - Resolution: Silver-layer cast alignment to DECIMAL(20,10); validated 2026-04-22
  - Impact: No material variance; control downgraded to info until full convergence

Exceptions & Change Log (Q2 2026)

The quarter's change activities were reviewed under CAB approvals, and all lineage tags were re-baselined post-deploy. Exceptions were transient and auto-remediated.

Exception/Change Register

- Reference: CHG0038610
  - Scope: MARKET_TRADE_FEED optional mic_code
  - Deployment: 2026-06-10T02:00-02:20Z
  - Post-Change Validation: Green; lineage tag LT-TRD-EQ-2026Q2 propagated
  - Follow-up: Minor DQ message (see MRC-DL-2913), closed
- Reference: CHG0038427
  - Scope: CRM_ACCOUNT_MASTER phone_country_code length
  - Deployment: 2026-05-02T01:30-01:45Z
  - Post-Change Validation: Amber (temporary), resolved to Green 2026-05-06
  - Follow-up: MRC-DL-2879 closed with confirmation from CDS
- Reference: INC0066019
  - Scope: Kafka message replay window extension for MARKET_TRADE_FEED

- Incident: 2026-06-18T19:12-19:30Z
- Root Cause: Bursty upstream publish; within capacity envelope
- Resolution: Auto-scaling absorbed; no data loss; lineage continuity preserved

Summary

All feeds retained certified status through Q2 2026. Data quality outcomes remained within SLO. Lineage completeness as measured by OpenLineage event coverage averaged 99.98%. No consumer SLAs were breached. The EDG team recommends continued monitoring of optional field rollouts and maintenance of CDC baselines for CRM and Trades.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Section 4. Lineage Trace Case Study -- Equities Trade to Risk PnL (EOD Chain)

Overview

This case study illustrates end-to-end lineage for a representative equities trade from initial capture through EOD Risk PnL publication in the Risk Mart. The objective is to confirm provenance metadata, rule execution, and dataset version continuity across the processing graph. The selected trade falls within typical volume and was processed on a standard business day with no change activity in the critical path.

Lineage Trace Parameters

- Business Date: 2026-06-14
- Trade Identifier: T-987654321 (synthetic example for documentation)
- Source Message Key (hash): 7f3c...ab19 (truncated)
- Processing Window: 2026-06-14T13:45:00Z-21:05:00Z
- Orchestrator Run IDs: AURUM-ING-20260614-1345Z-TRD, AURUM-CONF-20260614-2000Z-RISK
- OpenLineage Run UUIDs: 2c61e1e4-4fa9-4f1a-9d7a-93e4bcd21d2d (ingest), 51a8e09b-2a1f-4b4d-b602-46b2e2dbb3fb (conform)
- Dataset Versions: Bronze v2026.06.14.3, Silver v2026.06.14.2, Consumer v2026.06.14.RISK.1
- Control Tickets Referenced: MRC-DL-2902 (routine lineage sampling), QA-RA-1147 (Risk PnL recon batch)

Event Chain Summary

- Source Capture
  - System: TCS Equities v7.6
  - Event Time: 2026-06-14T13:46:12.184Z
  - Topic: tcs.equities.trade.v3
  - Schema: EQ_TRD_3.5
  - Notes: mic_code present; enrichable fields venue_timezone and counterparty_short_name populated upstream
- Landing and Bronze Ingest
  - System: CFDL Landing/Bronze
  - Job: ingest_standard_v4 (AURUM-ING-20260614-1345Z-TRD)
  - Time: 2026-06-14T13:46:15Z-13:49:30Z
  - Transformations: Envelope unwrap, Avro schema validation, partition assign (dt=2026-06-14/hr=13)
  - DQ: Completeness (trade_id, trade_ts, symbol, qty, price); Conformance (types, format); all passed
  - Provenance: Source event ID and message offset recorded in lineage facets
- Silver Conformance and Enrichment
  - System: CFDL Silver (Delta)

    - Job: transform_conform_v3 (AURUM-CONF-20260614-2000Z-RISK)
    - Time: 2026-06-14T20:00:05Z-20:08:37Z
    - Transformations: Business key normalization, FX rate join (REF_DATA_CCY_RATES), MIC-to-venue mapping, corporate action check (no action)
    - DQ: Referential integrity to FX (mid_rate) and REF_MIC; pass
    - Notes: Trade currency USD; no cross-currency conversion required

- Risk PnL Calculation and Publish
    - System: Risk Analytics Compute / Consumer (Risk Mart)
    - Job: publish_consumer_v2 (RISK-PNL-20260614-EOD)
    - Time: 2026-06-14T20:55:10Z-21:04:52Z
    - Compute: Position aggregation, mark-to-market using closing prices, PnL breakdown (realized/unrealized)
    - DQ: Aggregation reconciliation against prior-day close and intraday positions; pass
    - Lineage: Output record linked to silver trade via run UUID and dataset version

Transformation Node Detail (selected)

- Node: Ingest Bronze -- Trades
    - System: CFDL Bronze
    - Input: Kafka topic tcs.equities.trade.v3 (partition 14, offset 981,234,117)
    - Output Dataset ID: CFDL.BRONZE.TRADES.EQ v2026.06.14.3
    - Row Count (batch window): 4,981,220
    - Target Partition: dt=2026-06-14/hr=13
    - Checksum (data sample window): md5: b8d6...7a2c (truncated)
    - QA Reference: MRC-DQ-TRD-1142 (completed)

- Node: Silver Conformance -- Trades
    - System: CFDL Silver
    - Job ID: AURUM-CONF-20260614-2000Z-RISK
    - Input Dataset IDs: CFDL.BRONZE.TRADES.EQ v2026.06.14.3; CFDL.SILVER.REF.FX v2026.06.14.1; CFDL.SILVER.REF.MIC v2026.06.10.2
    - Output Dataset ID: CFDL.SILVER.TRADES.EQ v2026.06.14.2
    - Row Count: 4,981,203 (17 filtered due to upstream cancels)
    - Applied Rules: R-TRD-KEY-UNQ, R-TRD-FK-FX, R-TRD-MIC-MAP
    - Checksum (partition dt=2026-06-14): sha256: 3c01...ea5f (truncated)

- Node: Consumer Publish -- Risk PnL
    - System: Risk Mart (Consumer)
    - Job ID: RISK-PNL-20260614-EOD
    - Input Dataset IDs: CFDL.SILVER.TRADES.EQ v2026.06.14.2; CFDL.SILVER.MARKS.EQ v2026.06.14.1; CFDL.SILVER.POSITIONS.EQ v2026.06.14.3
    - Output Dataset ID: CONSUMER.RISK.PNL.EQ v2026.06.14.R1
    - Records Written: 118,042

- PnL Record for T-987654321: present (aggregated)
- Reconciliation Delta vs. RA control: $0.00 (within tolerance)

Provenance and Attestation

Provenance metadata were signed and retained per EDG-AUD-005. For the above run, lineage events were captured at each node with consistent run facets and dataset versioning, enabling traceability back to the original Kafka message. Checksums and row counts align across transitions with expected variances from legitimate cancellations and enrichments. Audit evidence packages (metadata only) are available upon request to Internal Audit.

Attestation Summary

- Signed By: EDG Lineage Service Account (service scope: lineage_sign)
- Signature Algorithm: Ed25519 (key rotation 2026-05-01 per KMS policy)
- Evidence Bundle IDs: EVD-TRD-20260614-01 (ingest), EVD-TRD-20260614-02 (conform), EVD-TRD-20260614-03 (publish)
- Retention Class: R3 (7 years)
- Storage Location: edg-evidence-bucket/q2-2026/trades/2026-06-14/
- Verification Window: 2026-06-15T10:00Z automated; 2026-06-16T14:30Z manual spot-check (QA-RA-1147)

Exception Review and Remediation (if any)

No exceptions were raised for the subject trade. The related batch experienced a minor warning during silver conformance due to 17 records marked as upstream cancels. These were correctly excluded according to rule R-TRD-CANCEL-FILTER with lineage facets recording prior states. The warning was informational and closed automatically by Data Quality Orchestrator with reference MRC-DQ-TRD-1151.

Related Ticket Log

- Ticket: MRC-DL-2902
  - Purpose: Routine Q2 lineage sampling for trade-to-PnL chain
  - Opened: 2026-06-13T16:05:44Z
  - Closed: 2026-06-17T09:12:10Z
  - Outcome: 25/25 samples complete lineage; no discrepancies
- Ticket: QA-RA-1147
  - Purpose: Risk PnL reconciliation (EOD vs. intraday roll-up)
  - Opened: 2026-06-15T08:01:22Z
  - Closed: 2026-06-15T12:34:55Z
  - Outcome: Within tolerance; documentation attached to quarterly evidence set

Controls and Monitoring Summary (EOD Chain)

SLO Compliance Snapshot -- 2026-06-14

- End-to-End Latency (trade capture to PnL publish): Target <= 75m; Actual 78m 40s (within non-peak threshold; approved variance window due to late mark file by 2m)
- DQ Rule Coverage: Target >= 95% of applicable; Actual 100%
- Lineage Event Coverage: Target >= 99.9%; Actual 100% for this chain

- Consumer Availability at Publish: Target >= 99.9%; Actual 100%

Alerting References

- Alert: AURUM-LAT-SILVER-P95-AMBER
  - Time: 2026-06-14T20:12:00Z
  - Detail: P95 for silver conformance exceeded advisory threshold by 14s
  - Action: No intervention required; self-cleared
- Alert: DQ-WARN-TRD-CANCEL-RATE
  - Time: 2026-06-14T20:06:41Z
  - Detail: Cancel rate at 0.00034 vs. baseline 0.00020
  - Action: Logged informational; trend within seasonal variation

Consumer Reconciliation Outcomes

Risk Analytics confirmed zero-dollar reconciliation delta at trade-level aggregation and instrument-level roll-ups. Daily attestation was signed off by RA Shift Lead (RA-SL-20260614-01) at 2026-06-15T09:03:12Z. No reprocessing or backfill actions were taken. Provenance retains the association between the PnL record and its upstream trade identifiers via stable business keys and run IDs, enabling reverse traversal upon audit request.

Conclusion

This lineage trace demonstrates consistent, verifiable provenance from the equities trade capture through to Risk PnL publication. The processing path adhered to expected transformations, with all quality controls passing and lineage events linking each dataset version. The case supports Q2 assertions regarding lineage completeness and reliability within the CFDL ecosystem.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Pages 9-10

Page 9 -- Section 3.4 Settlement and Clearing Lineage Review (PIPE-CLRG-PRD-001)

Summary

During Q2 2026, Enterprise Data Governance (EDG) and Treasury Data Engineering (TDE) jointly reviewed the end-to-end lineage for the Settlement and Clearing pipeline (PIPE-CLRG-PRD-001), focusing on traceability from trade capture through payment confirmation and ledger posting. Reviews were performed under tracking record MC-DL-2417, with supporting change requests CHG-2026-04302 (reference code update) and CHG-2026-04412 (schema evolution for settlement reason text). No critical lineage gaps were identified. One low-severity discrepancy was observed in the propagation of a newly introduced clearing status code "PD" (Pending Documentation) into the downstream reportable dataset, subsequently remediated within the standard change window. All findings align with Meridian's Data Lineage Standard v3.2 and the quarterly control suite defined by EDG.

Operational Run Parameters -- PIPE-CLRG-PRD-001 (Production)

- Job name: Settlement_Clearing_Daily_Consolidate
- Run identifier: run_2026-06-03T23:10:44Z_b2193e
- Schedule: Mon-Sat, 23:10 UTC (T+0)
- Orchestration: Orchestrator PROD cluster (US-EAST), workflow WF-CLRG-0005
- Source systems: Trade_Blotter (DSET-TRX-0219), Cash_Movements (DSET-CM-0107), Reference_Clearing_Codes (DSET-REF-0056)
- Targets: Payments_Clearing_Settled (DSET-PYM-0094), General_Ledger_Interface (DSET-GL-0021)
- Storage/compute: FinMart Warehouse PRD, schema finmart.prd.settlement
- Transformation package: settle_enrich_v4.6.3 (tag: Q2R2)
- Data quality rules executed: DQ-CLRG-001 (Row count variance), DQ-CLRG-002 (Duplicate settlement_id), DQ-CLRG-006 (Referential integrity: trade_id), DQ-CLRG-009 (Valid status codes)
- Row counts (source/target): 4,932,118 source records; 4,932,118 target records
- Runtime: 00:27:41; median over month: 00:26:59
- SLA: T+0 completion by 23:59:59 UTC -- met (buffer: 00:32:18)

Process Execution Log (extract)

- Step ID: CLRG-01 | Description: Ingest Trade_Blotter daily partition | Status: Completed | Start: 23:10:44 | End: 23:12:03 | Executor: TDE Batch Node A3 | Notes: 1:1 partition alignment with TRX_2026-06-03
- Step ID: CLRG-02 | Description: Ingest Cash_Movements (intraday aggregation) | Status: Completed | Start: 23:12:03 | End: 23:13:11 | Executor: TDE Batch Node B1 | Notes: Aggregation window 00:00-23:00 UTC
- Step ID: CLRG-03 | Description: Join trades to cash movements | Status: Completed | Start: 23:13:11 | End: 23:19:44 | Executor: Compute Pool PRD-SETTLE-2 | Notes: Key: trade_id, account_id
- Step ID: CLRG-04 | Description: Enrich with clearing codes | Status: Completed (warning) | Start: 23:19:44 | End: 23:21:15 | Executor: Compute Pool PRD-SETTLE-2 | Notes: 0.08% rows flagged with code "PD"
- Step ID: CLRG-05 | Description: DQ checks and metrics publish | Status: Completed | Start: 23:21:15 | End: 23:24:09 | Executor: EDG DQ Agent | Notes: All thresholds within bounds
- Step ID: CLRG-06 | Description: Write to finmart.prd.settlement | Status: Completed | Start: 23:24:09 | End:

23:27:41 | Executor: Warehouse Loader | Notes: 12 target partitions updated

Control Check Outcomes -- 2026-06-03

- DQ-CLRG-001 Completeness: Source vs target variance = 0.00% (threshold +/-0.5%) | Pass
- DQ-CLRG-002 Duplicate settlement_id: 0 duplicates (threshold 0) | Pass
- DQ-CLRG-006 Referential Integrity to TRX: 0 orphan trade_id (threshold 0) | Pass
- DQ-CLRG-009 Valid status codes: 100% in allowed set {CL, RJ, PD, PN} (threshold 100%) | Pass
- DQ-CLRG-012 Currency code validity (ISO 4217): 100% valid (threshold 100%) | Pass
- QC Publish Latency: 00:01:27 to EDG Metrics Bus | Within SLO

Column-Level Lineage (selected fields)

- settlement_id (DSET-PYM-0094.settlement_id) <- hash_concat(trade_id, value_date, leg_id) using settle_enrich_v4.6.3
- trade_id (DSET-PYM-0094.trade_id) <- direct map from DSET-TRX-0219.trade_id
- net_amount (DSET-PYM-0094.net_amount) <- sum(cash_amount) by trade_id, account_id post-fee
- fx_rate (DSET-PYM-0094.fx_rate) <- lookup FX composite (DSET-FXR-0007) by ccy_pair, value_date; priority vendor A; fallback vendor B if missing
- settled_amount (DSET-PYM-0094.settled_amount) <- net_amount * fx_rate (rounded to 2 decimals, banker's rounding)
- clearing_status (DSET-PYM-0094.clearing_status) <- map from Reference_Clearing_Codes.code; allowed {CL=Cleared, RJ=Rejected, PN=Pending, PD=Pending Documentation}

Observation and Disposition

- Finding F-CLRG-22: New status code "PD" introduced via reference data refresh (DSET-REF-0056) effective 2026-05-29 18:00 UTC under CHG-2026-04302. Downstream semantic layer SL-SETTLE-RPT omitted PD in filter list, causing temporary exclusion from Clearing Dashboard (Report SET-RPT-104). Impact: 0.08% of rows (3,962 records) on 2026-06-03; no financial impact to ledger interface.
- Resolution: TDE updated semantic layer dictionary under MC-DL-2429; EDG verified propagation on 2026-06-05 00:15 UTC. Change implemented per CHG-2026-04412 with UAT evidence (UAT Run ID run_2026-06-04T23:11:03Z_8cfa2e). Status: Closed.
- Data Dictionary: Entry added for PD status in Glossary GL-SETTLE-019, PR DD-2026-981 (merged).

Lineage Graph References

- Upstream nodes: urn:mc:dset:DSET-TRX-0219, urn:mc:dset:DSET-CM-0107, urn:mc:dset:DSET-REF-0056, urn:mc:dset:DSET-FXR-0007
- Transform node: urn:mc:pipeline:PIPE-CLRG-PRD-001@v4.6.3
- Downstream nodes: urn:mc:dset:DSET-PYM-0094, urn:mc:dset:DSET-GL-0021, urn:mc:semantic:SL-SETTLE-RPT
- Graph snapshot: urn:mc:lineage:PIPE-CLRG-PRD-001:2026Q2 (captured 2026-06-06 02:12 UTC by EDG Collector v2.9)

SLA and Throughput Metrics (Q2 to Date)

- On-time completion: 100% (53/53 cycles met, as of 2026-06-12)
- Median runtime: 00:26:58; P95: 00:28:44

- Median row volume per day: 4.91 million; variance (std dev): 0.21 million
- Data freshness at publish (to Analytics Hub): median 00:32:02 from market close; target <= 00:45:00

Governance and Compliance Notes

- Controls mapped: C-LIN-01 (Traceability), C-LIN-03 (Transform transparency), C-DQ-05 (Threshold monitoring), C-PRV-02 (Provenance tagging)
- Stewardship: Business Steward -- Treasury Ops (Steward ID: BST-TR-004); Technical Steward -- TDE (Steward ID: TST-TDE-003)
- Retention: DSET-PYM-0094 partitioned by value_date; hot storage: 12 months; archived to cold zone thereafter per RET-SET-2024 policy
- Auditability: All transformation functions referenced by immutable tag Q2R2; checksum catalog recorded in EDG Registry (REG-SET-2026-17)

Open Items and Follow-ups

- MC-DL-2436: Extend enum tests to detect unexpected new reference codes within 2 cycles; Proposed due 2026-06-28; Owner: EDG Controls
- MC-DL-2440: Add lineage annotation for "PD" at report filter node SL-SETTLE-RPT; Due 2026-06-20; Owner: BI Engineering
- MC-DL-2441: Validate FX fallback usage rate in PIPE-CLRG-PRD-001 to ensure alignment with FX sourcing policy; Due 2026-06-22; Owner: Market Data Engineering

Page 10 -- Section 3.5 Reference Data Provenance & Downstream Impact: FX Spot Rates (DSET-FXR-0007)

Scope

This section documents the lineage and provenance for FX_Spot_Rates_EOD (DSET-FXR-0007) and its composite derivative Rate_Composite_V2 (DSET-FXR-0012), as used across settlement, P&L, and risk calculations during Q2 2026. The review was coordinated by Enterprise Data Governance (EDG) with Market Data Engineering (MDE) and Risk Analytics (RA), tracked under MC-DL-2421. The objective was to confirm column-level traceability from vendor delivery through internal normalization, verify business rule transparency, and assess downstream impact of two minor schema adjustments introduced in May.

Provenance Statement

- Primary vendor: Refinitiv (Contract VND-RFT-2024-112)
- Delivery modality: Scheduled secure data feed, daily 22:15 UTC; file-based format with checksum manifest
- Secondary vendor (fallback): Bloomberg (Contract VND-BBG-2024-077), used conditionally for missing pairs
- Ingestion pipeline: PIPE-FXR-PRD-003@v3.2.1; normalizes vendor payload, enforces ISO currency codes, deduplicates by symbol-date
- Composite pipeline: PIPE-FXR-PRD-004@v2.8.0; selects primary rate; applies fallback if primary missing; stamps provenance attributes

Schema and Column Mapping (selected)

- asof_date (DSET-FXR-0007.asof_date) <- vendor.delivery_date (normalized to UTC date)
- ccy_pair (DSET-FXR-0007.ccy_pair) <- concat(base_ccy, quote_ccy)
- mid_rate (DSET-FXR-0007.mid_rate) <- (bid + ask)/2 when both present; else vendor mid
- source_vendor (DSET-FXR-0007.source_vendor) <- literal "Refinitiv" at load time
- composite_mid (DSET-FXR-0012.composite_mid) <- if primary mid_rate present then mid_rate else fallback_mid
- provenance_tag (DSET-FXR-0012.provenance_tag) <- "RFT" if primary, "BBG" if fallback; includes load_id reference

Change Review Log (Q2)

- CHG-2026-04155 | Summary: Introduce provenance_tag to DSET-FXR-0012 | Impacted columns: provenance_tag | Effective date: 2026-05-09 | Decision: Approved; documentation updated in Glossary GL-FX-007
- CHG-2026-04271 | Summary: Increase precision of mid_rate from 6 to 8 decimals | Impacted columns: mid_rate, composite_mid | Effective date: 2026-05-21 | Decision: Approved; backward-compatible for consumers reading as decimal(6) with non-breaking cast

Operational Metrics (Q2 to Date)

- Primary feed timeliness (P95): 22:16:41 UTC; SLO: <= 22:20:00 -- met
- Completeness (pairs per business day): median 176; interquartile range: 4; target >= 170 -- met
- Fallback activation rate: 0.7% of pair-days; threshold <= 2.0% -- within bounds
- Data freshness to consumers (P95): 00:24:18 post-delivery; SLO <= 00:30:00 -- met

Exception Review

- Incident INC-2026-08841 (2026-05-17): Missing AUD/JPY and CAD/SEK from primary vendor for 30 minutes post-cutoff. Composite pipeline applied fallback automatically; provenance_tag = "BBG" for 2 pairs. Downstream variance in P&L explained by Market Risk (RA-Ticket RA-PL-3021). Root cause: vendor-side delay; no internal processing fault. Status: Resolved; Post-incident review PIR-2026-052 completed 2026-05-24.
- Advisory ADV-2026-019 (2026-05-28): Precision increase per CHG-2026-04271 required minor cast adjustments in consumer semantic views. EDG bulk scan confirmed 7 affected views; BI Engineering updated by 2026-06-01 under tasks BI-SV-1104..1110.

Downstream Consumers (selected) and Declared Dependency Paths

- DSET-PYM-0094.settled_amount <- DSET-FXR-0012.composite_mid via PIPE-CLRG-PRD-001 (Section 3.4)
- VAR_Engine_Input (DSET-RISK-0301).fx_rate <- DSET-FXR-0012.composite_mid via PIPE-RISK-PRD-011
- Collateral_Valuation (DSET-COLL-0205).fx_rate <- DSET-FXR-0012.composite_mid via PIPE-COLL-PRD-002
- P&L_Attribution (DSET-PL-0142).fx_base_rate <- DSET-FXR-0007.mid_rate with vendor=Refinitiv, unless provenance_tag=BBG

Control Validation -- EDG Quarterly Suite

- C-PRV-01 Vendor checksum validation: 100% pass (66/66 days)
- C-LIN-02 Lineage completeness to composite: 100% fields mapped (asof_date, ccy_pair, mid_rate, provenance_tag, load_id)
- C-DQ-03 Numeric precision enforcement at 8 decimals: 100% compliant post-change
- C-MON-04 Fallback activation alerting within 5 minutes: 100% triggered within SLA during INC-2026-08841

Parameter Snapshot -- PIPE-FXR-PRD-003 (2026-06-11)

- Run identifier: run_2026-06-11T22:15:22Z_17f0c3
- Input manifest count: 178 pairs; checksum variance: 0
- Deduplication: 0 duplicates removed; primary keys (ccy_pair, asof_date)
- Transform version: fx_ingest_norm v3.2.1 (tag Q2R2)
- Output volume: 178 records to DSET-FXR-0007; 178 propagated to DSET-FXR-0012

Quality Metrics Publication Log (extract)

- 22:17:11 UTC: Published DQ-FXR-001 (pair count) to EDG Metrics Bus; value=178; status=OK
- 22:17:14 UTC: Published DQ-FXR-004 (fallback activation) value=0; status=OK
- 22:17:16 UTC: Published DQ-FXR-007 (precision check) sample pass rate 100%; status=OK

Findings and Dispositions

- Finding F-FXR-11: Consumer view PL_Summary_V (vw_pl_agg_v2) performed implicit cast from decimal(8) to decimal(6), truncating least significant digits after CHG-2026-04271. Operational impact: none to totals; minor tick variance in audit trail comparison. Disposition: BI-SV-1106 adjusted view to decimal(8); Closed 2026-06-01.
- Finding F-FXR-12: Provenance tagging not surfaced in Collateral_Valuation semantic model. Impact: observability gap (cannot attribute fallback usage). Disposition: MC-DL-2445 opened to extend semantic model with provenance_tag; Target completion 2026-06-25; Owner: Collateral Analytics.

Lineage Graph References

- Upstream nodes: urn:mc:vendor:VND-RFT-2024-112, urn:mc:vendor:VND-BBG-2024-077
- Transform nodes: urn:mc:pipeline:PIPE-FXR-PRD-003@v3.2.1, urn:mc:pipeline:PIPE-FXR-PRD-004@v2.8.0

- Datasets: urn:mc:dset:DSET-FXR-0007, urn:mc:dset:DSET-FXR-0012
- Downstream nodes: urn:mc:dset:DSET-PYM-0094, urn:mc:dset:DSET-RISK-0301, urn:mc:dset:DSET-COLL-0205, urn:mc:semantic:vw_pl_agg_v2

Stewardship and Governance

- Business Steward: Market Data -- BST-MD-002
- Technical Steward: MDE -- TST-MDE-004
- Policy mappings: P-DATA-014 (External Vendor Data Handling), P-ACCT-007 (Financial Calculations Accuracy), P-LIN-003 (Data Lineage Verifiability)
- Retention: FX raw payload retained 90 days; normalized/composite datasets retained 24 months in hot storage, then archived

Open Actions

- MC-DL-2445: Add provenance_tag to Collateral_Valuation model and annotate lineage; Due 2026-06-25; Owner: Collateral Analytics
- MC-DL-2450: Quarterly restore test for archived FX partitions (Jan 2025) to validate lineage continuity in cold storage; Due 2026-06-30; Owner: Platform Operations with EDG oversight
- MC-DL-2453: Enhance fallback activation alert to include downstream consumer enumeration in notification payload; Due 2026-07-05; Owner: EDG Tooling

Commentary

The FX reference data lineage is stable and meets Meridian's traceability and freshness objectives. The introduction of a provenance_tag provides demonstrable transparency for fallback usage and has already proved its utility during INC-2026-08841. Precision enhancement rolled out without material downstream disruption; minor semantic adjustments were completed by BI Engineering within the designated window. No further lineage risks are identified at this time, subject to completion of open actions.

Page 11 -- Section 4.2: Lineage Validation -- Treasury Liquidity Mart (TLM)

Overview

During Q2 2026, the DataOps and Finance Data Engineering teams completed scheduled lineage validation of the Treasury Liquidity Mart (TLM) domain, focusing on the D+1 daily build for core positions, funding buckets, and stress liquidity overlays. The scope included upstream ingestion from ALM ODS and Product Control reference datasets, mid-tier transformation rules (allocation and bucketing), and downstream conformance tables consumed by Treasury Analytics and Regulatory Reporting. The validation aligned to Change Window CW-2026-05-B and incorporated updates adopted under RFC-6389 (Funding Bucket Code Standardization).

Observations and Findings

- A transient uptick in null incidence was observed in field intraday_buffer_pct (0.38% vs. prior 0.21%), remaining below the 0.5% threshold and attributed to missing upstream intraday flags in two product desks during a holiday-impacted trading day (Ref: INC-2026-05-14218, informational only).
- Funding bucket code standardization (RFC-6389) renamed attribute funding_bucket_code width from CHAR(2) to CHAR(3) to support extended horizons (e.g., "1D", "7D", "30D", "90D"). No downstream parsing issues detected; data dictionary entry updated (DDOC-2026-218).
- Reconciliation variance of 0.023% concentrated in low-value retail sweep accounts; variance closed by end-of-day refresh without manual intervention.

Documentation and Stewardship Updates

- Data dictionary entries for tlm_liquidity_positions and tlm_bucket_summary revised to reflect the CHAR(3) funding bucket code and clarified definitions for intraday_buffer_pct and stress_cushion_rate. Steward review logged under STEW-2026-310 and peer-approved by Governance Council (GOV-MIN-2026-05).
- Business glossary cross-references added for "Liquidity Coverage Buckets" and "Operational Deposit Stability," ensuring consistent terminology across Treasury and Liquidity Risk functions.

Conclusion

The TLM lineage validation confirms upstream-to-downstream consistency post-standardization, with no control exceptions requiring remediation. Minor data drift remained within tolerated thresholds and was tracked via informational incident for transparency. No further action items are proposed for Q2; monitoring continues under routine controls.

Page 12 -- Section 4.3: Provenance Trace -- Market Risk VaR Stream (MR-VaR)

Overview

This section documents an end-to-end provenance trace for the Market Risk Value-at-Risk (VaR) daily batch as of 2026-06-07 (T+1), focusing on the 10-day, 99% confidence portfolio-level VaR aggregates. The trace emphasizes upstream trade capture, pricing/curve assemblies, and transformation checkpoints through to the conformed risk fact tables. The review was executed collaboratively by Risk Analytics Engineering and Data Quality & Controls during weekly control window CW-2026-06-A.

Stewardship and Governance Notes

- The addition of valuation_adjustment_flag was reviewed by the Risk Data Governance Council on 2026-05-28 and approved for inclusion with default false until full adoption by all desks. The glossary entry is tracked under DDICT-2026-099 and slated for publication in the next weekly steward cycle.
- Factor mapping exceptions for exotic instruments remain explicitly excluded per MR-VAR-DC-2026-Q2, with the rationale encoded in the lineage metadata for transparency and auditability. No portfolio-level materiality concerns were raised by Risk Governance.

Conclusion

The MR-VaR provenance trace demonstrates complete and timely upstream sourcing, stable transformation checkpoints, and verified downstream delivery. Control outcomes met or exceeded Q2 targets, and documentation updates are in progress to reflect minor schema and glossary changes. No remediation actions are required; monitoring continues under standard quarterly controls and attestations.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Pages 13-14

Page 13

4. Lineage Verification -- Retail Credit Portfolio (RR_MART)

Overview

This section documents lineage verification activities performed for the Retail Risk Mart (RR_MART) domain during Q2 2026. The scope covered ingestion-to-consumption flows for retail loan performance, delinquency status, and loss provisioning attributes used by Risk Analytics and Finance Controllership. Verification concentrated on the daily T+1 batch paths and the Q2 Month-End (ME) close series (ME-2026-04, ME-2026-05, ME-2026-06). Lineage instrumentation was executed by Data Operations (DOps), with oversight from the Metadata & Governance Office (MGO) and sign-off by Finance Data Stewardship (FDS).

Data Assets Inventory (In-Scope)

| Asset ID | Logical Name | System/Tier | Owner Team | Classification | Schema Ver | Record Count (Q2 Avg) |

| 6 | RR_EDW_03 | Reporting view refresh | RR_RPT_21 | BR-RR-230: RWA panel view | 02:20-02:29 UTC | Success |

Notes:

- No schema drift detected between RR_SV_05 v2.06 and RR_GD_11 v3.92 during Q2. Schema change request SCR-RR-2026-015 (adding field cur_bal_iso) deferred to Q3 to avoid month-end risk.
- Masking policy BR-RR-121 validated against Data Privacy Catalog entry DPC-PII-044; hash conformance check passed for hashed_phone and hashed_email columns.

Field-Level Lineage Fidelity Results

- Attribute coverage: 99.3% of RR_EDW_03 columns traced to atomic sources with deterministic mapping.
- Null-propagation rules: Verified for 47/47 nullable attributes; no silent defaulting detected.
- Calculated measures: 18 derived measures tested; 2 minor deviations observed (rounding precision on loss_forecast_q4 and exposure_at_default adjusted per BR-RR-240 in May release).

Data Quality Monitors (select)

| Monitor ID | Asset | Rule | Threshold | Q2 Mean | Q2 Breach Count | Status |

| DQ-RR-009 | RR_SV_05 | not_null(primary_account_id) | 99.99% | 100.00% | 0 | Green |

| DQ-RR-045 | RR_GD_11 | currency_iso3 in ISO-4217 | 100% | 99.98% | 3 | Amber (closed) |

Issue Log and Disposition

| Ticket | Opened | Summary | Severity | Assigned To | Root Cause | Resolution | Closed |

| INC-0094387 | 2026-05-14T02:13:08Z | RR_EDW_03 duplicate composite keys exceeded target on ME close | Medium | DOps L2 -- Night Ops | Late-arriving CDC replay from CoreLoanAccounts | Quarantine-run and idempotent merge patch in BR-RR-215 v2.1; reprocess ME-2026-05 | 2026-05-14T08:56:22Z |

| PRB-004781 | 2026-06-03T15:40:11Z | currency_code propagation mismatch in RWA panel | Low | Risk Analytics Engineering | Stale reference table iso_currency_map | Refresh job dependency realigned; catalog tag added to lineage | 2026-06-04T10:12:09Z |

| MDC-4199 | 2026-06-17T09:21:55Z | Field-level mapping gap for loss_forecast_q4 rounding | Low | FDS Stewardship | Rule text/version misalignment | Updated BR-RR-240 to v1.3; test evidence attached (EV-22190) | 2026-06-18T14:03:47Z |

Control Evidence References

- EV-21987: Collibra lineage graph export (RR_MART) -- snapshot 2026-06-30
- EV-22004: Airflow run logs (DAG meridian_rr_pipeline_v4) -- Q2 archive
- EV-22190: Numeric rounding conformance tests -- BR-RR-240 v1.3
- EV-22212: Data Privacy Catalog acceptance -- DPC-PII-044 alignment

Observations and Findings

- Provenance continuity was maintained across all Q2 cycles with no untracked transformations. The Spark Listener connector correctly captured UDF usage for delinquency bucketing (udf_rr_bucket_v2), confirmed by transformation lineage nodes T-1194 through T-1203.
- One-time amber breach on duplicate keys during ME-2026-05 was fully reconciled; downstream report RCF-262 backfilled within SLA with no business impact per Risk Reporting attestation RR-ATTEST-2026-05-15.
- Currency code propagation incident exposed a weak dependency mapping for iso_currency_map. The lineage model has been annotated with a Critical Data Element (CDE) tag and a freshness SLA of 24 hours to prevent stale joins.
- Data quality monitors demonstrate stable performance, with mean thresholds consistently exceeding policy baselines. The minor rounding adjustment removed a 0.02% variance observed in month-end stress scenarios.

SLA and Performance Summary (Q2)

| Dimension | Target | Achieved | Comment |

| Batch Start (T+1) | 01:00-01:20 UTC | 01:09 UTC avg | Within window |

| DAG Duration | <= 95 minutes | 83 minutes avg | 90th pct 89 minutes |

| Evidence Publication | < 6 hours post-run | 2 hours avg | Enabled by automated harvest |

| Steward Review | 3 business days | 2 business days | On-time sign-offs |

Stewardship and Sign-Offs

- Data Domain Steward (Retail Risk): S. Patel -- Signed 2026-06-28 (Doc ID: SIG-RR-2026-Q2-01)
- Finance Data Stewardship: K. Nguyen -- Signed 2026-06-29 (Doc ID: SIG-FDS-2026-Q2-07)
- Metadata & Governance Office QA: L. Romero -- Signed 2026-06-30 (Doc ID: SIG-MGO-2026-Q2-03)

Planned Actions for Q3 (related to Lineage)

- Promote SCR-RR-2026-015 to add cur_bal_iso with documented lineage to source RR_SRC_01.
- Extend field-level lineage capture to include two additional derived measures (net_write_off_12m, util_rate_trend).
- Implement dependency alerting for reference datasets tagged as CDEs in RR_MART.

Page 14

5. Data Quality and Reconciliation -- Q2 Close Cycle

Purpose

This page details the Q2 month-end reconciliation outcomes for the Retail Risk Mart lineage chain, tying RR_EDW_03 outputs to Finance General Ledger (GL) and to published Risk Reporting artifacts. The objective is to confirm that end-to-end data movement and transformation preserved financial integrity and regulatory reporting consistency.

Month-End Reconciliation Summary (ME-2026-04, -05, -06)

| Check ID | Scope | Threshold | ME-04 Result | ME-05 Result | ME-06 Result | Status |

| REC-RR-001 | EDW principal balance vs. GL control (by product) | <= 0.05% variance | 0.018% | 0.021% | 0.017% | Pass |

| REC-RR-008 | Charge-off totals vs. Finance subledger | <= 0.10% variance | 0.034% | 0.036% | 0.031% | Pass |

| REC-RR-013 | Delinquency bucket distribution stability (MoM) | <= 1.5 pp shift | 0.9 pp | 1.1 pp | 0.7 pp | Pass |

| REC-RR-019 | Currency code join completeness | 100% | 100% | 99.98% | 100% | Pass (note ME-05) |

| REC-RR-024 | SCD2 effective dating monotonicity | 100% | 100% | 100% | 100% | Pass |

Incident and Exception Register (Month-End)

| Ticket | Timestamp (UTC) | Check | Description | Impact | Owner | Resolution |

| EXC-006512 | 2026-05-14T06:12:37Z | REC-RR-001 | Product-level variance exceeded 0.02% on Small Business Loans (SBL) | None (within tolerance) | Controllership | Annotated as expected due to late fee accrual timing; evidence EV-22091 |

| INC-0094387 | 2026-05-14T02:13:08Z | REC-RR-024 | Duplicate composite keys in EDW during ME-05 pre-check | Low | DOps L2 -- Night Ops | Applied idempotent merge patch; re-run completed 06:30 UTC; tie-out confirmed |

| EXC-006579 | 2026-06-04T09:18:02Z | REC-RR-019 | Two records with missing iso_currency_map on ME-05 | None (report unaffected) | Risk Analytics | Reference table refreshed; lineage tag updated; closed with note EV-22134 |

Provenance Chain: RCF-262 Risk-Weighted Assets Weekly

Narrative

The RCF-262 weekly package sources its base from RR_EDW_03 reporting views v2026.06. Provenance begins at CoreLoanAccounts (RR_SRC_01) and PaymentsHistory (RR_SRC_09), flows through rr_loans_bronze and rr_loans_curated, and lands in rr_risk_mart with transformation nodes for delinquency bucketing, exposure at default (EAD) estimation, and loss forecasting. Final shaping occurs via EDW reporting views (vw_rr_rwa_panel_v26), which apply aggregation and rounding rules documented in BR-RR-230 and BR-RR-240.

Provenance Evidence

| Evidence ID | Artifact | Description | Date |

| EV-22245 | Lineage Graph Node Map | Full path nodes T-1102 through T-1210 for RCF-262 | 2026-06-27 |

| EV-22247 | Transformation Spec | BR-RR-230 and BR-RR-240 versions with checksum | 2026-06-27 |

| EV-22252 | Report Extract | RCF-262 week 26 extract (masked sample) | 2026-06-28 |

| EV-22260 | Steward Attestation | Risk Reporting tie-out note RR-ATTEST-2026-06-28 | 2026-06-28 |

Operational Runbook Excerpt -- Month-End Promotion (RR_MART to EDW)

| Step | Description | Inputs | Outputs | Control |

| 1 | Freeze Silver dataset for month-end | rr_loans_curated v2.06 | snapshot RR_SV_05_ME | CHG-0028411 |

| 2 | Execute Gold transformations with ME flags | BR-RR-201, BR-RR-215 v2.1 | rr_risk_mart_ME | Airflow run ID rr_me_2026_05 |

| 3 | Run EDW SCD2 merge with reconciliation pre-check | rr_risk_mart_ME | EDW_RetailRisk_ME | Pre-check REC-RR-024 |

| 4 | Refresh reporting views and cache warm | EDW_RetailRisk_ME | vw_rr_rwa_panel_v26 | Post-check REC-RR-001/008 |

| 5 | Publish evidence and route for sign-off | All above | EV-sets 22245-22260 | SIG workflow WF-RR-ME-Q2 |

Execution Metrics (Month-End)

| Metric | Target | ME-04 | ME-05 | ME-06 |

| DAG wall time | <= 140 minutes | 127 | 134 | 125 |

| Pre-check completion | <= 20 minutes | 14 | 19 | 13 |

| Tie-out variance window | <= 0.05% | 0.018% | 0.021% | 0.017% |

| Evidence publication | <= 6 hours | 2h 05m | 2h 18m | 2h 01m |

Data Controls and Governance

- Critical Data Elements: account_id, as_of_dt, delinquency_bucket, currency_iso3, exposure_at_default. All CDEs have lineage completeness at 100% with assigned stewards and freshness SLAs recorded in the Catalog (CAT-RR-2026-Q2).
- Policy Alignment: Data transformations validated against Enterprise Data Standards EDS-TR-04 (Type Coercion), EDS-MASK-02 (Masked PI fields), and EDS-QA-11 (Numeric Precision). Conformance checks logged in EV-22190 and EV-22247.
- Change Management: All month-end execution windows operated under approved change CHG-0028411 (ME-2026-06) with back-out plans documented. No unplanned changes were recorded.

Findings and Recommendations

- Finding FR-RR-2026-Q2-01: Reference dependency iso_currency_map had stale entries leading to 2 records unmatched in ME-05. Recommendation: Implement freshness monitoring with alert at 20 hours; assign to DOps and Risk Analytics. Action captured in JIRA MDC-4231 with due date 2026-07-15.
- Finding FR-RR-2026-Q2-02: Minor rounding variance on loss_forecast_q4 observed during early Q2 resolved via BR-RR-240 v1.3. Recommendation: Establish regression tests in pre-prod prior to any rounding spec updates. Test plan to be authored by FDS; tracking ticket MDC-4242.
- Finding FR-RR-2026-Q2-03: Duplicate key incident at ME-05, although remediated, indicates sensitivity to late CDC replays. Recommendation: Adjust EDW merge window buffer by +5 minutes during ME execution, with monitoring. Change proposal captured under SCR-RR-2026-021 for CAB review.

Attestations and Sign-Offs (Month-End)

| Role | Name | Statement | Date | Reference |

| Domain Steward (Retail Risk) | S. Patel | Confirms lineage completeness and CDE coverage | 2026-06-28 | SIG-RR-2026-Q2-01 |

| Controllership Reviewer | D. Alvarez | Confirms GL tie-out within tolerance | 2026-06-29 | SIG-FIN-2026-Q2-12 |

| MGO QA | L. Romero | Confirms policy conformance and evidence sufficiency | 2026-06-30 | SIG-MGO-2026-Q2-03 |

Post-Close Review Actions

- Schedule Q3 lineage drill with focus on reference data flows; include iso_currency_map and product_hierarchy_v5 in harvest baseline.
- Expand sampling rate for data pattern profiling from 5% to 7% for two weeks post any schema change approval, reverting upon stabilization.
- Update runbook WF-RR-ME-Q2 with explicit dependencies and sequence numbers for reference datasets to strengthen pre-check coverage.

Status

All Q2 lineage verification, reconciliation checks, and attestations for RR_MART are complete. Residual risks are low and tracked with corrective actions scheduled for early Q3, with no adverse impact on regulatory or management reporting noted during the quarter.

Page 15 -- Section 3.4: Pipeline LQ-ABS-DLY Valuation Waterfall -- Data Lineage Verification Results

Overview

This section documents the Q2 2026 lineage verification for the LQ-ABS-DLY Valuation Waterfall pipeline (ID: pl-lq-abs-dly-vwf-01) operated by the Enterprise Data Platform (EDP) team in partnership with Risk Analytics Technology (RAT) and the Data Governance Office (DGO). The verification covered end-to-end provenance from primary trade captures through canonical valuation facts and into the Liquidity & ABS analytic marts consumed by Treasury and Risk. The scope included attribute-level traceability for currency-normalized net present value (NPV), discount factors, accruals, and price flags, as well as the reconciliation of record counts and lineage markers (dataset IDs, run IDs, and transformation signatures).

Verification Window and Scope

- Environment: PROD
- Period Reviewed: 2026-04-01 through 2026-06-30
- Business Domains: Liquidity Risk, Structured Products (ABS)
- Datasets in Scope: ds-abs-trade-stg-v5, ds-curve-cdn-v7, ds-fx-spot-v9, ds-valuation-fact-v6, dm-abs-liquidity-v2

Verification Run Parameters (EDP-42311)

- Run ID: run_2026-05-17T01:15:42Z_9c7f
- Trigger: Scheduled (Airflow DAG dag-lq-abs-vwf@v3.18.4)
- Orchestrator: Airflow (Cluster: edp-prod-cl1)
- Code Artifact: git tag v3.18.4 (commit 7a3c2d1)
- Transformation Engine: Spark 3.5.1 (YARN queue: edp-prod-standard)
- Data Catalog: Collibra DGC 2026.2; Atlas Bridge v2.7
- SLA Target: End-to-end < 45 min; Data freshness < T+0 02:00 ET
- Business Owner: Treasury Risk (Owner: M. Chen)
- Technical Owner: EDP Data Pipelines (Owner: M. Alvarez)
- Data Stewards: DGO (R. Patel), RAT (J. Ko)
- Controls Referenced: DGO-9725 (Lineage Completeness), RAT-5540 (Valuation Rule Traceability)

High-Level Lineage Summary

Source systems included TradeOps ABS Capture (sys-abst-01), Market Data Hub (mdh-pricerates-02), and FX Reference Service (fxr-spot-01). Data flowed into the EDP staging zone, where raw deltas were partitioned by as-of date (UTC). The canonicalization step joined ABS positions with approved rate curves and FX spot rates to compute unified valuation inputs. The valuation waterfall applied standardized business logic for discounting and accrual roll, with outputs written to ds-valuation-fact-v6 and consumed by the ABS liquidity mart (dm-abs-liquidity-v2). All lineage edges were present in the catalog with valid provenance tags for the reviewed period.

Operational Step Log (run_2026-05-17T01:15:42Z_9c7f)

Timestamp (UTC)	Component	Action	Result	Records (in/out)	Duration
2026-05-17T01:15:43Z	ingest-abst-delta	Read ABS trades (T+0..	Succeeded	112,904 / 112,904	00:03:12
2026-05-17T01:18:58Z	ingest-curve-cdn	Read curve points (US..	Succeeded	9,624 / 9,624	00:00:47

2026-05-17T01:44:20Z	publish-liquidity-mart	Refresh dm-abs-liquidi..	Succeeded	112,881 / 112,881	00:02:04

Notes:

- Canonicalization reduced 23 records due to duplicate trade event IDs (event_id collision resolved via latest timestamp within the batch; see EDP-42311-ANX1).
- No late-arriving market data observed within the window; FX spot and curve snapshots aligned to 00:59:30Z.

Data Quality Metrics Summary (DGO-9725 Control Set)

Issue Register and Remediation (as of 2026-06-28)

Ticket	Severity	Summary	Owner	ETA	Status
EDP-42402	Low	Missing provenance ta..	EDP Pipelines	2026-07-05	In Progress
RAT-5601	Low	Clarify rounding mode ..	RAT Governance	2026-07-01	Resolved
DGO-9810	Medium	Align valuation-fact-v6..	DGO Stewardship	2026-07-12	Open

Business Rule Traceability (RAT-5540)

- Discount Factor Source: mdh-pricerates-02 (curve_type=OIS, tenor up to 30Y), applied via RAT rule set rvw-v1.14; transform signature tr_sig: df_apply_1c9ea.
- FX Normalization: fxr-spot-01 with rate_policy=EOD Close (00:59Z snapshot), transform signature tr_sig: fx_norm_3b77d; currency pairs limited to USD crosses for ABS valuations.
- Accrual Calculation: 30/360 day-count per instrument subtype per product catalog mdm-product-abs-v4; transform signature tr_sig: accrual_30_360_a11f2.

Data Catalog and Stewardship Confirmations

- Collibra assets for ds-valuation-fact-v6 and dm-abs-liquidity-v2 display valid upstream links to ds-abs-trade-stg-v5, ds-curve-cdn-v7, and ds-fx-spot-v9. Relationship verification executed on 2026-06-20 14:08 ET; steward sign-off recorded by R. Patel (DGO) under attestation ATT-DGO-2026Q2-143.
- Atlas Bridge lineage graph includes run-level facets for run_2026-05-17T01:15:42Z_9c7f, including code artifact commit and Spark application IDs (app-20260517-0031..0035). No orphaned process nodes identified.

Consumer Impact Assessment

- Treasury Liquidity Dashboard (svc-liqdash-02) and ABS Risk Explorer (svc-absrex-01) consumed dm-abs-liquidity-v2 at 02:05 ET daily with no freshness SLA breaches during the review period.
- A minor visualization variance on 2026-05-18 (INC0045993) traced to client-side cache staleness; lineage intact, no data defects. Resolved by BI Ops; reference: BIOPS-2209.

Conclusion

The LQ-ABS-DLY valuation waterfall demonstrates complete and reliable lineage with measurable control adherence. Outstanding items are documentation-oriented (provenance tag coverage on roll-ups and glossary alignment) and do not affect calculation integrity or consumer SLAs. Follow-ups are tracked via EDP-42402 and DGO-9810 with agreed target dates in early Q3 2026.

Page 16 -- Section 3.5: Reference Data Conformity (Counterparty Master) -- Provenance and Stewardship Review

Purpose and Scope

This section summarizes the Q2 2026 provenance and conformity assessment for the Counterparty Master domain (dataset: ds-cpty-master-v3), focusing on the lineage from Legal Entity Reference (LER) and external vendor feeds to downstream risk and finance marts. The assessment validates attribute-level origins, stewardship ownership, change management references, and control adherence across production runs between 2026-04-01 and 2026-06-30.

Source and Feed Inventory

System	Feed Name	Contract/Ref ID	Frequency	Contact (Team)
LER Hub (ler-core-01)	Legal Entity Core	LER-CT-0192	Hourly	MODM (K. Ortega)
Vendor A (vnd-ref-01)	Ratings and Sectors	VND-A-RAT-007	Daily	Vendor Mgmt (S. Park)
Vendor B (vnd-lei-02)	LEI Registration	VND-B-LEI-115	Daily	Vendor Mgmt (S. Park)
MDM (mdm-geo-01)	Geographic Hierarchies	MDM-GEO-2026Q2	Weekly	MDM (H. Yamada)
Sanctions Ref (snx-01)	Screening Reference	SNX-REF-318	Daily	Compliance Data (P. Li)

Lineage Chain Overview

The ds-cpty-master-v3 dataset aggregates entities from ler-core-01 as the system of record for legal entity identity, enriches with ratings and sector classifications from Vendor A, LEI codes from Vendor B, and geographic hierarchies from MDM. Compliance screening reference keys (not screening outcomes) are embedded to standardize join behavior in downstream screening platforms. All transformations are deterministic joins, survivorship rules, and conforming code mappings defined in the DGO-controlled rulebook rd-cpty-v3.6.

Run Parameters and Controls (MODM-CP-2026Q2-05)

- Environment: PROD
- Orchestrator: Airflow DAG dag-cpty-master@v3.6.9
- Code Artifact: git tag v3.6.9 (commit 41b8c99)
- Run Example: run_2026-06-12T03:10:04Z_21ae
- SLA: Publish by 03:30 ET; Freshness < T+0 03:15 ET
- Stewardship: Primary Steward (MODM) -- K. Ortega; Secondary Steward (DGO) -- L. Singh
- Controls Applied: DGO-9702 (Reference Data Integrity), DGO-9725 (Lineage Completeness), MODM-210 (Golden Record Survivorship)

Data Quality and Lineage Controls (DGO-9702, DGO-9725)

- Lineage coverage across ds-cpty-master-v3 to downstream consumers (dm-risk-cpty-v4, dm-fin-cpty-v2) measured at 100% for Q2, with all process nodes associated to run contexts and code artifacts.
- Golden record survivorship rules executed deterministically; audit artifacts (survivorship decision tables) stored in catalog attachments for runs 2026-04-15, 2026-05-12, and 2026-06-12.
- Provenance tag density measured at 99.7%; 0.3% shortfall linked to legacy entities without vendor crosswalks (tracked under DGO-9891; assessed as no material impact on consumer analytics).

Approvals and Stewardship Attestations

Approval ID	Type	Approver	Date (ET)	Notes

CAB-2026-06-14-CP-M..	CAB Minutes	CAB Secretary	2026-06-14 09:30	Routine quarterly review..

Glossary and Term Alignment

- Terms validated: Legal Entity, Counterparty, LEI, GICS Sector, Domicile Country, Sanctions Reference Key. Definitions aligned with Collibra Glossary v2026.2.1.
- RAT requested clarification on "Consensus Active" term; glossary amended per DGO-9862 to incorporate LEI lapsed consideration without altering LER authority.

Downstream Consumer Confirmation

- Risk Exposure Warehouse (svc-rewh-01) and Finance Subledger (svc-finsub-03) consumed ds-cpty-master-v3 via standardized interfaces. No lineage discrepancies reported in Q2; all consumer lineage edges present and verified in Atlas on 2026-06-20 15:26 ET.
- BI Ops confirmed consistent key cardinality in Counterparty Dimensions for dashboards fin-cpty-dim and risk-cpty-dim; reference BIOPS-2221.

Observations and Planned Follow-Ups

- Vendor dependency on GICS completeness remains a watch item; Vendor Management coordinating SLA addendum discussion (VM-2026Q2-17).
- Legacy entity crosswalk gaps will be addressed via incremental onboarding of historical mappings from archival LER snapshots (tracked under MODM-6810).

- No policy deviations identified. All changes administered through standard CAB, with deployment windows maintained within approved schedules.

Conclusion

The Counterparty Master provenance and conformity posture for Q2 2026 is satisfactory. Lineage is complete and reproducible, stewardship attestations are current, and consumer usage reflects stable keys and attributes. Minor data completeness issues are externally sourced and contained with transparent lineage and catalog notes. Remediation items are on-track for early Q3 review and are not expected to affect dependent reporting or risk calculations.

Page 17 -- Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Section 5.2: Lineage Validation Review -- Fund Pricing Pipeline (PROD)

Overview

The Enterprise Data Platform (EDP), in collaboration with the Data Governance Office (DGO) and Risk Analytics, completed a Q2 2026 lineage validation review for the Fund Pricing Pipeline servicing the consolidated fund price mart (asset key: DCT-PRV-FUNDPRC-001). The review window covers 2026-04-01 through 2026-06-30. This assessment verifies end-to-end lineage from vendor-sourced NAV/price files through staging, normalization, validation, enrichment, and publication to the curated mart consumed by Portfolio Accounting and Regulatory Reporting Ops (RRO). No personally identifiable information is processed in this pipeline. Data Classification: Internal Use.

Context Parameters

- Review Reference: MCDL-4321 (Data Lineage Quarterly Review)
- Pipeline Identifier: PRC-FUND-MART-PROD-01
- Environment: PROD / Region: US-EAST-2
- Business Owner: Finance Data Stewardship (FDS)
- Technical Owner: EDP Lineage Engineering (LE)

- Step: Normalize; Component: Spark Transform; Input: raw; Output: normalized; Timestamp: 02:21:22Z; Status: Success; Duration: 00:08:45; Records In/Out: 1,524,338/1,520,901
- Step: Validate; Component: DQ Engine; Input: normalized; Output: validated; Timestamp: 02:30:11Z; Status: Success; Duration: 00:05:27; Records In/Out: 1,520,901/1,517,442
- Step: Enrich; Component: FundRef Join; Input: validated; Output: enriched; Timestamp: 02:35:46Z; Status: Success; Duration: 00:04:03; Records In/Out: 1,517,442/1,517,442

- Step: Publish; Component: Mart Writer; Input: enriched; Output: mart tables; Timestamp: 02:39:59Z; Status: Success; Duration: 00:06:08; Records In/Out: 1,517,442/1,517,442

Data Quality and Lineage Metrics (Q2 Aggregate)

- Metric: Row-Level Lineage Coverage; Value: 99.82% (target >= 99.5%)
- Metric: Column-Level Mapping Completeness; Value: 100% for 72 active columns
- Metric: Timeliness (03:00 UTC SLA); Value: Met 90/91 trading days (98.9%)
- Metric: Duplication Rate Post-Normalization; Value: 0.18% (down from 0.24% in Q1)
- Metric: Rejects to Quarantine (DCT-QRT-FUNDPRC-005); Value: 0.45% of total rows (vendor schema drift on 2026-05-16)
- Metric: Source Cross-Check Concordance; Value: 99.67% within +/-2 bps tolerance
- Metric: Currency Coverage; Value: 37 currencies; 0 missing in Q2
- Metric: Unit Testing of Transform Rules; Value: 412 assertions; 100% pass

Change Impact Summary (Q2)

- CI-PRC-212: Introduced dedicated field price_source_rank to capture vendor selection rationale; lineage updated from Vendor B mapping (rule TM-PRC-77) to enrichment rule TM-PRC-104. Impact: Non-breaking; consumers unaffected. Ticket: MCDL-4457 (Closed 2026-05-03).
- CI-PRC-224: Adjusted rounding precision for fractional NAV in JPY-denominated funds to 5 decimals per updated policy FRP-11. Impact: 142 funds; backfill executed 2026-06-10. Ticket: MCFR-3291 (Closed 2026-06-14).
- CI-PRC-231: Vendor C added as tertiary cross-check; lineage graph gained 1 upstream node and 2 validation edges. Ticket: SUPP-CA-982 (Closed 2026-06-22).

Transformation and Mapping Snapshot

- Rule ID: TM-PRC-77; Source: vendor_b.nav_value; Target: nav_gross; Derivation: direct cast; Coverage: 100%
- Rule ID: TM-PRC-99; Source: vendor_a.fee; Target: mgmt_fee_bps; Derivation: scale/10000; Coverage: 100%
- Rule ID: TM-PRC-104; Source: vendor_priority.rank; Target: price_source_rank; Derivation: coalesce(a.rank,b.rank,c.rank); Coverage: 100%
- Rule ID: TM-PRC-121; Source: base_currency, fx_rate; Target: nav_base; Derivation: multiply; Coverage: 99.9% (0.1% missing rates flagged)

Exception Review -- Tickets and Disposition

- Ticket: MCDQ-11409; Opened: 2026-05-16T04:22Z; Summary: Vendor B schema drift (added column nav_comment). Disposition: Mapped to optional text field; no lineage gaps; Closed: 2026-05-17T12:10Z; Owner: EDP-LE.
- Ticket: MCDL-4372; Opened: 2026-05-30T03:03Z; Summary: 12 funds with stale fx_rate for EOD-2026-05-27. Disposition: Backfill from reference FX; lineage annotated; Closed: 2026-05-30T15:19Z; Owner: Risk Analytics.
- Ticket: MCOPS-7718; Opened: 2026-06-12T02:48Z; Summary: Publish lag 7 minutes (SLA near-breach). Disposition: Increased executor slots for transform step; monitoring thresholds adjusted; Closed: 2026-06-13T10:01Z; Owner: Platform Ops.

Control Evidence -- Automated Checks

- Step ID: CTRL-LIN-01; Control: Asset in catalog with active stewardship; Evidence: CTLG-REC-DCT-PRV-FUNDPRC-001; Result: Pass 2026-06-28T03:05Z

- Step ID: CTRL-LIN-04; Control: Row-level lineage persisted; Evidence: LIN-GRAPH-9f4a1e63-edgecount=3,142,611; Result: Pass 2026-06-28T03:07Z
- Step ID: CTRL-DQ-12; Control: Thresholds on duplication and null NAV; Evidence: DQ-RPT-2206-NAV-NULL=0; Result: Pass 2026-06-28T03:08Z
- Step ID: CTRL-PUB-03; Control: Consumer dataset update; Evidence: MART-CHECKSUM-fa12d8c vs prior fa12cfc; Result: Pass 2026-06-28T03:09Z

Narrative Assessment

The lineage model reflects a complete and accurate traversal from vendor sources to the mart, with coverage exceeding targets. The minor increase in enrichment time observed on 2026-06-12 was transient and addressed without structural changes. Lineage annotations now include explicit rationale for vendor precedence, which improves auditability for price selection. No unauthorized sources were detected. All glossary term bindings validate against the catalog. Evidence packages are archived with immutable checksums.

Steward Attestation

- Submitted by: A. Reynolds (Finance Data Stewardship Lead)
- Timestamp: 2026-06-30T19:42:11Z
- Statement: "Lineage for the Fund Pricing Pipeline as of Q2 2026 is accurate, complete for in-scope entities, and suitable for downstream reporting."

Page 18 -- Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Section 5.3: Provenance Trace -- Corporate Actions and Entitlements Feed (APAC PROD)

Overview

This section documents the provenance trace for the APAC Corporate Actions (CA) and Entitlements feed powering downstream entitlements calculators and event notification services. The scope includes ingest and harmonization of event data (dividends, splits, rights, mergers) from two market data vendors and internal Instrument Master, culminating in the curated CA event store (asset key: DCT-PRV-CA-APAC-002). The period under review is 2026-04-01 to 2026-06-30. No personally identifiable data is processed. Data Classification: Internal Use.

Provenance Context

- Review Reference: MCDL-4528 (Provenance Quarterly Review)
- Feed Identifier: CA-APAC-PROD-02
- Environment: PROD / Region: AP-SOUTHEAST-1
- Business Owner: Markets Data Stewardship (MDS)
- Technical Owner: EDP Lineage Engineering (LE)
- Schema Version: ca_event_v2.6.1
- Lineage Graph Hash: 2a77b9d1-3d2e-4c2e-9a5b-6b9f0a1fbb46
- Evidence Repository: EDOC-CA-APAC-Q22026 (hash: e34bc678)

Upstream Sources -- Registration

- Source: Vendor X; System: CA-Feed-X; Asset ID: DCT-UP-CA-X-009; Event Types: DIV, SPLT, RIGHTS, MERGER; Transport: SFTP pull to landing; SLA: D+0 by 02:00 UTC
- Source: Vendor Y; System: CA-Feed-Y; Asset ID: DCT-UP-CA-Y-011; Event Types: DIV, SPLT, BONUS; Transport: API batch; SLA: D+0 by 01:45 UTC
- Source: Instrument Master; System: INSTR-MST; Asset ID: DCT-REF-INS-004; Event Types: reference join; Transport: Internal catalog; SLA: continuous availability

Transformation Map Snippet (Selected Fields)

- Rule ID: TM-CA-102; Source Field: vendor_x.announce_dt; Target Field: announced_date; Derivation: parse_iso; Coverage: 100%; Notes: mapped across both vendors
- Rule ID: TM-CA-118; Source Field: vendor_y.ex_dt; Target Field: ex_date; Derivation: normalize_timezone(Asia/Tokyo to UTC); Coverage: 99.8%; Notes: 0.2% exposed missing tz metadata, see MCDQ-11502
- Rule ID: TM-CA-131; Source Field: instr.isin; Target Field: instrument_id; Derivation: map_to_master_id; Coverage: 100%; Notes: disambiguation with market MIC
- Rule ID: TM-CA-147; Source Field: vendor_x.div_rate; Target Field: cash_dividend_rate; Derivation: scale_to_pct; Coverage: 100%; Notes: bound to BGR-CA-07
- Rule ID: TM-CA-159; Source Field: vendor_y.local_ccy; Target Field: payout_currency; Derivation: uppercase; Coverage: 100%; Notes: conformance check applied

Processing Run Log Extract -- 2026-06-27 Cycle (JobRunID JR-CA-APAC-0627-0110Z)

- Timestamp: 01:10:03Z; Event: Ingest Vendor X; Records In/Out: 82,114/82,114; Status: Success; Duration: 00:03:12
- Timestamp: 01:14:01Z; Event: Ingest Vendor Y; Records In/Out: 54,907/54,907; Status: Success; Duration: 00:02:46
- Timestamp: 01:17:10Z; Event: Normalize/Harmonize; Records In/Out: 137,021/135,884; Status: Success; Duration: 00:07:51
- Timestamp: 01:25:14Z; Event: Validate/Enrich (Instrument Master join); Records In/Out: 135,884/135,872; Status: Success; Duration: 00:03:42
- Timestamp: 01:29:02Z; Event: Publish to CA Event Store; Records In/Out: 135,872/135,872; Status: Success; Duration: 00:02:58

Quality and Provenance Metrics (Q2 Aggregate)

- On-Time Delivery to SLA (02:00 UTC): 98.4% (target >= 98.0%)
- Row-Level Lineage Coverage: 99.76% (target >= 99.5%)
- Column Mapping Completeness: 100% for 58 active fields
- Duplicate Suppression Rate: 0.63% post-harmonization (down from 0.71% in Q1)
- Invalid Instrument Identifiers (pre-join): 0.45% flagged; 100% resolved via Instrument Master
- Event Type Concordance (Vendor X vs Y overlap): 99.12% within policy tolerances
- Quarantined Records (DCT-QRT-CA-APAC-003): 0.52%; primary cause: missing ex_date time zone tags
- Business Rule Coverage: 47 rules in scope; 47/47 executed; 0 critical failures

Business Rules Traceability (Sample)

- Rule ID: BGR-CA-03; Description: Set record_effective_date = ex_date - 1 if market is T+1; Source: CA Policy CA-POL-02; Coverage: 100%; Evidence: DQ-RPT-CA-2206-03
- Rule ID: BGR-CA-07; Description: Dividend rate scaled to percent with 4 decimals; Source: CA Policy CA-POL-04; Coverage: 100%; Evidence: TST-UNIT-CA-147
- Rule ID: BGR-CA-12; Description: Entitlement factor equals post/pre split ratio; Source: CA Policy CA-POL-06; Coverage: 100%; Evidence: UAT-LOG-CA-1202

Exceptions and Resolutions

- Finding: MCDQ-11502; Opened: 2026-05-09T02:41Z; Severity: Medium; Description: 0.2% of Vendor Y records missing time zone tags for ex_date; Impact: potential off-by-hours in UTC normalization; Disposition: Vendor correction deployed 2026-05-18; Backfill executed for 2026-05-01 to 2026-05-10; Closed: 2026-05-19T16:23Z; Owner: Vendor Management Ops.
- Finding: MCDL-4589; Opened: 2026-06-06T01:57Z; Severity: Low; Description: Additional event subtype "BONUS-ALT" introduced by Vendor Y; Impact: unmapped subtype; Disposition: Mapped to BONUS with subtype retained; Lineage updated rule TM-CA-171; Closed: 2026-06-07T11:05Z; Owner: EDP-LE.
- Finding: MCOPS-7852; Opened: 2026-06-20T01:49Z; Severity: Low; Description: Publish lag 6 minutes due to downstream store compaction; Impact: near-SLA breach; Disposition: Schedule adjustment approved; Closed: 2026-06-21T08:32Z; Owner: Platform Ops.

Change Log (Q2)

- CI-CA-310: Introduced payout_currency normalization to enforce ISO 4217 uppercase; Ticket: MCDL-4507;

Effective: 2026-04-12; Lineage Impact: none (in-field transform).

- CI-CA-322: Added instrument_id disambiguation using MIC and local ticker; Ticket: MCDL-4544; Effective: 2026-05-25; Lineage Impact: one additional join edge to Instrument Master alias table.
- CI-CA-333: Harmonized rights issue ratio precision to 8 decimals; Ticket: MCFR-3348; Effective: 2026-06-17; Backfill performed for impacted range; Evidence: BCK-RPT-CA-333.

Control Evidence -- Automated Provenance Checks

- Control: Catalog Registration (asset, schema, owner); Evidence: CTLG-REC-DCT-PRV-CA-APAC-002; Result: Pass 2026-06-27T02:11Z
- Control: Source Signature Match (file hash concordance); Evidence: SIG-RPT-CA-0627 (sha256 aligned across vendors); Result: Pass 2026-06-27T02:12Z
- Control: Lineage Persistence (node/edge counts stable +/-3%); Evidence: LIN-GRAPH-2a77b9d1 nodes=1,128, edges=3,984; Result: Pass 2026-06-27T02:14Z
- Control: Publication Completeness (consumer partition counts); Evidence: MART-COMP-CA-0627; Result: Pass 2026-06-27T02:15Z

Sample Record Provenance Trace (Anonymized)

- Event Key: EVT-APAC-20260627-000982
- Upstream Origins: Vendor X file X_20260627.csv (row 100,983); Vendor Y batch Y-20260627-01 (row 63,221); Instrument Master INS-034512 (ISIN anonymized)
- Transform Rules Applied: TM-CA-102, TM-CA-118, TM-CA-131, TM-CA-147
- Validation Checks: BGR-CA-03, BGR-CA-07
- Outcome: Published to partition dt=2026-06-27; lineage edges 5; audit checksum 7a2c4e1d

Narrative Assessment

The provenance trace for the APAC CA feed is complete and stable. Vendor Y's minor metadata issue in May was corrected with documented backfill, and lineage annotations reflect the temporary exception. All required business rules executed for in-scope events with full coverage. Source/target mappings are current and tested. No unauthorized upstream systems were detected. Glossary bindings for event_type, ex_date, and entitlement_factor are present and validated against the corporate business glossary.

Stakeholder Acknowledgements

- Markets Data Stewardship Attestation: Submitted by J. Wong (MDS Lead), 2026-06-30T10:05:49Z
- Technical Review: EDP Lineage Engineering sign-off by L. Patel, 2026-06-30T12:22:31Z
- Consumer Acknowledgement: RRO confirms receipt and use of partitions dt=2026-04-01 through dt=2026-06-30; Ref: RRO-ACK-CA-APAC-Q2

SLA and Monitoring Summary

- SLA Adherence: 98.4% on-time publication; single near-breach (MCOPS-7852) mitigated without consumer impact.
- Monitoring Signals: No sustained error rate; transient schema variance auto-reconciled within governed thresholds.
- Future Actions: Monitor vendor subtype taxonomy; extend mapping tests to include emerging subtypes (tracked under MCDL-4621, due 2026-07-15).

End of Section 5.3.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 19 of 35

Section 6.3: Downstream Consumption Traceability -- Trading and Risk Domains

This section documents the Q2 2026 verification of lineage from trade capture through curated marts and into downstream risk analytics and consumer dashboards. The review covered completeness, transformation fidelity, and reproducibility across partition dates 2026-04-01 to 2026-06-30. Testing was conducted by Data Engineering (Trading) with Enterprise Data Governance (EDG) oversight. No material breaks were identified; minor variances related to late-arriving counterparty reference updates were logged and resolved within SLA.

Audit scope and parameters

Field | Value

Window | 2026-04-01 to 2026-06-30 (inclusive)

Environments | PRD

Business domains | Front Office Trading, Market Risk

Primary sources | oms.trade_events_v3, fix.raw_messages_v2, mdm.counterparty_master_v4

Curated targets | wh.trades_fact_v5, dm.risk_exposure_daily_v2

Downstream consumers | RiskCalc Service (svc_riskcalc), Trader PnL Dashboard (dash_tr_pnl_v7)

Teams | Data Engineering (Trading), Market Risk Ops, EDG Lineage Office

Change tickets | CHG0032197, CHG0032449

Incidents reviewed | INC00492871 (metadata lag), INC00493322 (partition rerun)

Operational run summary (representative control dates)

Run ID | Job name | Partition date | Start (UTC) | Duration | Input rows | Output rows | Status

trl-PRD-87219 | etl_trade_events_to_wh | 2026-05-31 | 2026-06-01T00:13:07Z | 00:22:14 | 12,481,330 | 12,481,330 | Succeeded

trl-PRD-87220 | etl_trade_events_to_wh | 2026-06-01 | 2026-06-02T00:12:55Z | 00:21:47 | 10,932,405 | 10,932,405 | Succeeded

rsk-PRD-55931 | build_risk_exposure_daily | 2026-06-01 | 2026-06-02T02:39:58Z | 00:17:51 | 10,932,405 | 10,932,405 | Succeeded

Lineage control checks -- link integrity and transformation fidelity

Control ID | Description | Expected | Observed | Variance | Result | Ticket ref

LC-TE-021 | Trade key persists S->C->D | 100% match | 100% | 0% | Pass | --

LC-CP-009 | Counterparty join on cp_id | 100% resolved | 99.97% | 0.03% | Pass (within SLA) | INC00492871

LC-PF-004 | Product taxonomy normalization | All product_cd mapped | All mapped | 0 gaps | Pass | --

TF-PnL-013 | Notional scaling by ccy precision | Correct scaling | Correct | 0 exceptions | Pass | --

TF-RSK-027 | Exposure bucket sum equals detail sum | +/-0.01% | +0.003% | Within tolerance | Pass | --

Notes:

- LC-CP-009 variance due to late-arriving reference data (mdm.counterparty_master_v4 snapshot refreshed at 2026-06-01T00:30Z). Reconciled on rsk-PRD-55904+1 rerun; lineage graph annotated with provisional cp_name on impacted records.
- No reprocessing required for trades_fact; downstream exposure build incorporated refreshed reference without altering raw trade-level keys.

Dataset mapping overview

Prose summary:

The upstream source oms.trade_events_v3 provides immutable trade_event_id and event_ts, enriched by mdm.counterparty_master_v4 on cp_id. Curated wh.trades_fact_v5 consolidates insert/update semantics via a last_non_null merge on trade attributes. The dm.risk_exposure_daily_v2 aggregates by risk_bucket, product_family, and cp_rating, preserving surrogate keys for drill-back. The lineage catalog confirms column-level traceability for 48 out of 48 business-critical columns under EDG certification EDG-CERT-TRD-2026Q2.

Column mapping excerpt (curated to downstream)

Downstream column | Curated source | Transform | Notes

exposure_amt_usd | wh.trades_fact_v5.notional_amt * fx.rate | Scaled, rounded 2dp | Rate as of EOD partition date

risk_bucket | wh.trades_fact_v5.tenor_bucket | Direct | Controlled vocabulary

cp_rating | mdm.counterparty_master_v4.rating | As-of join | Effective_date <= partition_date

product_family | wh.trades_fact_v5.product_family | Direct | Governed domain

trade_event_id | wh.trades_fact_v5.trade_event_id | Direct | Primary trace key

Sampling and reproducibility evidence

Sampling protocol:

- For partitions 2026-05-15, 2026-05-31, and 2026-06-01, a deterministic 0.05% sample (hash modulo on trade_event_id) was traced end-to-end.
- Sampled rows were verified across source, curated, and downstream using stable comparison keys.

Sample verification metrics

Partition | Sample size | Key match rate | Numeric delta (USD) P95 | String attr mismatch | Result

2026-05-15 | 6,104 | 100% | 0.00 | 0 | Pass

2026-05-31 | 6,241 | 100% | 0.00 | 0 | Pass

2026-06-01 | 5,466 | 100% | 0.00 | 0 | Pass

Provenance markers and snapshot IDs

Snapshot catalog:

- oms.trade_events_v3: snapshot_id=te3-2026-06-01-001, captured 2026-06-01T00:05:12Z
- mdm.counterparty_master_v4: snapshot_id=cp4-2026-06-01-003, captured 2026-06-01T00:29:41Z
- wh.trades_fact_v5: commit_id=tf5-cm-41277, committed 2026-06-01T00:36:02Z
- dm.risk_exposure_daily_v2: commit_id=re2-cm-19904, committed 2026-06-01T02:58:12Z

These identifiers are recorded in the EDG lineage catalog (object IDs LGO-TRD-1172, LGO-RSK-2089) and are reproducible under CHG0032197 deployment baselines.

Operations log excerpts (selected informational entries)

Timestamp (UTC) | Component | Message | Correlation ID

2026-06-01T00:13:09Z | etl_trade_events_to_wh | Partition=2026-05-31 input scan initialized | corr-e3c7-9a22

Observed deviations and tickets

- Ticket INC00492871: Metadata lag for mdm.counterparty_master_v4 on 2026-06-01 initial exposure build. Impact: 0.03% unresolved cp_id for interim exposure snapshots. Resolution: Reference refresh consumed on rerun rsk-PRD-55931; EDG annotation added to lineage path LGO-RSK-2089.
- Ticket CHG0032449: Schema comment update for dm.risk_exposure_daily_v2.cp_rating to align with updated rating scale description. No physical schema change; lineage unaffected.

Control attestation

- Attested by: Market Risk Ops (MRO) -- sign-off 2026-06-15 14:22 EDT, Ref: ATT-RSK-2026Q2-015.
- EDG review: Complete. Certification extended through 2026-09-30 contingent on monthly spot checks (EDG-MON-TRD-092).

Section 6.4: Join Point Review -- Reference Data

A targeted review of reference join points confirmed conformity of business keys, effective dating, and null-handling for counterparty and product master. No drift observed in key semantics; minor descriptive field updates noted and cataloged.

Join conformance summary

Join point | Key | Validity logic | Q2 exceptions | Outcome

Trades to Counterparty | cp_id | effective_date <= trade_date < end_date | 0.03% provisional | Within SLA; resolved on next refresh

Trades to Product | product_cd | direct lookup | 0 | Pass

Trades to Desk | desk_id | direct lookup | 0 | Pass

Conclusion for Page 19: End-to-end lineage for Trading and Market Risk flows is intact, accurate to defined tolerances, and evidences reproducibility through recorded snapshot and commit identifiers. Open items are informational and tracked to closure.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 20 of 35

Section 7.1: Regulatory Reporting Lineage -- Capital and Liquidity Feeds

This section details lineage verification for feeds into the Regulatory Warehouse (regwh) supporting FR Y-9C and LCR analytics. The review covers inbound curated marts, harmonization transformations, and downstream aggregation layers. Oversight was provided by Regulatory Reporting Technology (RRT) and EDG. Controls emphasize traceability of balances, classification codes, and as-of dating.

Scope and governance

Field | Value

Reg reports covered | FR Y-9C Schedule HC, LCR daily metrics

Data domains | Wholesale loans, trading book exposures, liquidity buffers

Source marts | wh.trades_fact_v5, wh.loans_balances_v7, wh.liquidity_positions_v3

Target schemas | regwh.capital_positions_v4, regwh.lcr_components_v3

Stakeholders | RRT, Finance Data Ops, Liquidity Risk, EDG

Change tickets | CHG0032310 (schema evolution), CHG0032528 (metadata enrichment)

Review window | 2026-04-01 to 2026-06-30

Run provenance (representative end-of-month cycle)

Run ID | Job name | As-of date | Start (UTC) | Duration | Inputs | Outputs | Status

reg-PRD-77102 | build_capital_positions | 2026-06-30 | 2026-07-01T03:05:11Z | 00:19:43 | wh.trades_fact_v5, wh.loans_balances_v7 | regwh.capital_positions_v4 | Succeeded

reg-PRD-77136 | build_lcr_components | 2026-06-30 | 2026-07-01T03:31:02Z | 00:14:27 | wh.liquidity_positions_v3 | regwh.lcr_components_v3 | Succeeded

Aggregation and classification checks

Control ID | Description | Expected | Observed | Tolerance | Result

RG-CAP-101 | Balance roll-up equals detail sum | Match | +0.0007% | +/-0.01% | Pass

RG-CAP-118 | RWA classification mapping complete | 100% | 100% | N/A | Pass

RG-LCR-042 | HQLA Level classification | Valid set | Valid | N/A | Pass

RG-LCR-057 | As-of date harmonization | Single date | Single | N/A | Pass

Prose summary:

For capital positions, exposures sourced from wh.trades_fact_v5 are mapped to Basel categories using the governed product taxonomy (EDG domain TAX-PROD-2025). Reconciliation confirms that netted exposures at the reportable level equal the sum of atomic values within +/-0.01%. Liquidity components derive from wh.liquidity_positions_v3 with stable HQLA classifications; no drifts in code sets were detected in Q2.

Column lineage excerpt -- capital positions

Target column | Source | Transform | Note

reporting_date | As-of | Direct | From job partition parameter

exposure_ead | wh.trades_fact_v5.notional_amt | Exposure conversion factor applied | ECF table version RRT-ECF-2026.2

rwa | exposure_ead | Risk weight multiplier | Weight table version RRT-RW-2026.1

basel_category | wh.trades_fact_v5.product_family | Governed lookup | No unmapped values

Metadata and catalog entries

- Lineage object IDs: LGO-REG-3301 (capital), LGO-REG-3302 (lcr).
- Dataset certifications: EDG-CERT-REG-2026Q2, valid through 2026-10-15.
- Data dictionaries updated under CHG0032528 with enhanced definitions for exposure_ead and rwa.

Reproducibility anchors -- snapshots and commits

Dataset | Snapshot/Commit | Timestamp (UTC)

wh.trades_fact_v5 | commit tf5-cm-42791 | 2026-07-01T00:44:55Z

wh.loans_balances_v7 | commit lb7-cm-11802 | 2026-07-01T01:12:09Z

wh.liquidity_positions_v3 | commit lp3-cm-9907 | 2026-07-01T01:37:22Z

regwh.capital_positions_v4 | commit cp4-cm-21003 | 2026-07-01T03:24:54Z

regwh.lcr_components_v3 | commit lc3-cm-15044 | 2026-07-01T03:45:29Z

Controls execution log (informational)

Timestamp (UTC) | Control | Message | Ref

2026-07-01T03:10:49Z | RG-CAP-101 | Detail sum reconciled to reportable (delta=+0.0007%) | corr-a8f2-11c0

2026-07-01T03:19:57Z | RG-CAP-118 | 0 unmapped basel_category values | corr-a8f2-11c0

2026-07-01T03:36:21Z | RG-LCR-042 | HQLA classification conforms to dictionary v2026.2 | corr-c2b1-77d3

2026-07-01T03:43:17Z | RG-LCR-057 | Single as-of date across inputs | corr-c2b1-77d3

Section 7.2: Golden Source Conformance Assessment

This subsection reviews alignment between curated marts and declared golden sources for reference domains utilized in regulatory reports. The EDG-certified golden sources remain mdm.counterparty_master_v4 (counterparty), mdm.product_master_v6 (product), and fin.gl_account_master_v3 (GL accounts). Conformance was measured by key coverage, descriptive attribute parity, and effective-dating logic.

Conformance metrics

Domain | Key coverage | Descriptive parity | Effective-dating adherence | Outcome

Counterparty | 100% | 99.98% | Pass | Pass

Product | 100% | 100% | Pass | Pass

GL Account | 100% | 100% | Pass | Pass

Notes:

- Counterparty descriptive parity variance (0.02%) attributable to two entities with mid-cycle legal name updates. Resolved next refresh; lineage annotation added to LGO-REG-3301 for trace documentation. Ticket REF: INC00494112 (informational).

Section 7.3: Data Retention and Archival Hooks -- Lineage Anchoring

Archival lineage hooks were reviewed to confirm that report-ready datasets in regwh are anchored to immutable curated commits, with retention marks aligned to Finance Records Policy FRP-7.2. The audit validated the presence of partition-level manifests and associated checksum digests.

Archival verification summary

Partition date | Target dataset | Manifest present | Digest verified | Anchor commit present | Result

2026-04-30 | regwh.capital_positions_v4 | Yes | Yes | Yes | Pass

2026-05-31 | regwh.capital_positions_v4 | Yes | Yes | Yes | Pass

2026-06-30 | regwh.capital_positions_v4 | Yes | Yes | Yes | Pass

2026-06-30 | regwh.lcr_components_v3 | Yes | Yes | Yes | Pass

Procedural summary (performed by Finance Data Ops on 2026-07-02 10:18 EDT):

- Verified that regwh commit cp4-cm-21003 references wh.trades_fact_v5 commit tf5-cm-42791 and wh.loans_balances_v7 commit lb7-cm-11802, as recorded in lineage manifests LMF-REG-21003-A and -B.
- Confirmed checksum digests on manifests match catalog entries in EDG under evidence set EVD-REG-2026Q2-07.

Tickets and approvals

Reference | Type | Description | Status | Owner | Date (UTC)

CHG0032310 | Change | Evolve regwh.capital_positions_v4: add column regulatory_flag (nullable) | Implemented | RRT | 2026-05-12

CHG0032528 | Change | Enrich metadata for exposure_ead, rwa; update business definitions | Implemented | EDG | 2026-06-18

INC00493322 | Incident | Rerun required on 2026-06-01 risk exposure due to reference lag | Resolved | Market Risk Ops | 2026-06-02

ATT-REG-2026Q2-021 | Attestation | Quarterly lineage attestation -- capital and liquidity | Signed | Finance Data Ops | 2026-07-03

Data Quality KPIs -- Q2 aggregates

KPI | Target | Q2 actual | Outcome

Timeliness (EOM T+1 availability) | >= 99.0% | 100.0% | Met

Completeness (key coverage) | 100% | 100% | Met

Classification accuracy (governed code sets) | >= 99.9% | 100.0% | Met

Reproducibility (replay variance) | <= +/-0.01% | +/-0.003% | Met

Narrative summary:

The regulatory lineage posture for Q2 2026 is stable. All critical path datasets demonstrate deterministic traceability to curated sources, with sufficient checkpoints to support audit replay. No schema-breaking changes were introduced; the addition of regulatory_flag is backward-compatible and captured in EDG dictionaries. Minor descriptive misalignments on counterparty names were time-bounded and did not affect key-based joins or classifications.

Appendix -- Sample trace (capital positions, 2026-06-30)

Step | Dataset | Operation | Key | Row count | Checkpoint

1 | wh.trades_fact_v5 | Read partition | trade_event_id | 11,992,044 | commit tf5-cm-42791

2 | wh.loans_balances_v7 | Read partition | loan_id | 2,114,559 | commit lb7-cm-11802

3 | Join: product master | Lookup | product_cd | N/A | mdm.product_master_v6 snapshot pm6-2026-06-30-002

4 | Transform | Exposure calc | N/A | 14,106,603 | ECF v2026.2 applied

5 | Aggregate | Basel category roll-up | basel_category | 2,188 | Intermediate cp tmp-20260630-A

6 | Write | regwh.capital_positions_v4 | reporting_date | 2,188 | commit cp4-cm-21003

Ownership and accountability

- Data Engineering (Trading): Upstream curated marts ownership (wh.trades_fact_v5).
- Finance Data Ops: Regulatory Warehouse operations and archival.
- EDG Lineage Office: Catalog accuracy and certification lifecycle.
- Regulatory Reporting Technology: Control execution and evidence management.

Conclusion for Page 20: Regulatory feeds into regwh for capital and liquidity reporting maintain complete and accurate lineage, with reproducible anchors and verified archival hooks. Controls met or exceeded targets. All changes and minor incidents were documented and closed within governance frameworks.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Section 9.1: Fixed Income Trade Confirmations (FI_TC) Lineage Verification -- Monthly Close Cycle M5

Overview

This section documents the end-to-end lineage verification of the Fixed Income Trade Confirmations dataset for the May monthly close (cycle M5, schedule window 2026-06-03 through 2026-06-05). The verification assesses traceability from the Front Office Order Management System (FO-OMS) through Enterprise Data Lake (EDL) curated zones into the Finance Ledger Data Mart (FLDM). The focus is on completeness, transformation integrity, temporal alignment, and reconciling control totals against Finance reference tallies.

Run Context Parameters

- Run Sponsor: Finance Data Operations (FDO), in coordination with Risk Analytics Technology (RAT) and Enterprise Data Platform (EDP)
- Ticket References: DGOV-6214 (governance review), CHG-009384 (schema baseline), INC-274582 (anomaly triage), PRB-11845 (timezone normalization post-incident review)
- Environment: Production (PRD), Region: primary
- Audit Window: TradeDate 2026-05-01 to 2026-05-31

Parameter Table -- Execution Metadata

Net PnL (USD)	18,442,100.76	18,441,976.51	-124.25	Pass
Trade Count	4,218,904	4,218,901	-3	Pass

Transformation Provenance

- Registered functions applied:
  - MAP_CLEARING_CODE v3.2 (approved under CHG-008771)
  - NORMALIZE_TIMEZONE v2.1 (PRB-11845 closure dependency)
  - FX_NORMALIZE v5.0 (rates window 2026-05-31T22:00Z snapshot)
  - DATE_STANDARDIZE v4.3
- All functions sourced from EDP Transform Registry; checksums aligned to registry baselines as of 2026-06-03 21:00 UTC.
- Column-level lineage persisted to LG-2026-Q2-0091 with 56 column mappings, 7 calculated derivations, and 0 opaque transforms.

Observed Anomalies and Dispositions

- SettlementLocation null spike (2.10% vs threshold 1.00%): Root cause traced to upstream reference data refresh delaying clearing location enrichment for a subset of Eurobond trades (TradeDesk EU-FI). Tracked under INC-274582. No financial impact to control totals; advisory banner posted in dataset catalog entry for M5 cycle. Disposition: informational, monitor next cycle.
- ArrivalTime timezone variance (143 records ingested with CET tag): Records normalized during step 3; captured in step notes and linked to PRB-11845. No downstream propagation.

Stakeholder Review and Sign-off

- 2026-06-04 09:30 ET: DGO review complete (DGOV-6214). Reviewer: L. Marcel. Outcome: Approved.
- 2026-06-04 11:15 ET: Finance Operations attestation received. Reviewer: P. Huang. Outcome: Accepted; no exceptions.
- 2026-06-04 14:05 ET: RAT confirmation of downstream timeliness for risk reports (RAT-OPS-2026-312). Outcome: On time.

SLA and Timeliness

- SLA met. Orchestrated run completed at 02:11 UTC within the 02:45 UTC cutoff.
- End-to-end lineage traceability score (completeness of hops and transformations recorded): 100% (all hops present: Source -> Raw -> Curated -> Mart).

Data Classification and Controls

- Dataset classification: Internal.
- Sensitive attributes: None in scope for this lineage (PII absent). Hash-based control checks performed on non-sensitive composite keys to verify end-to-end alignment.

Notes

- No schema drift events detected. CHG-009384 baseline remains current.
- Three records rejected due to ConfirmID duplication; deduplication key collision acknowledged by FO-OMS; remediation in progress upstream, no reprocessing required for M5.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Section 9.2: Client Reference Master (CRM) Propagation to Risk Analytics -- Attribute-Level Provenance

Overview

This section summarizes lineage verification for the Client Reference Master (CRM) dataset as it propagates from Master Data Management (MDM) to the Risk Analytics Repository (RAR) for counterparty exposure reporting. The scope covers the Q2 cycle for the period 2026-04-01 through 2026-06-15, emphasizing attribute-level mappings, drift monitoring, and timeliness of micro-batch delivery.

Execution Summary

- Coordinating Teams: Compliance Data Services (CDS), MDM Operations (MDMO), Risk Analytics Technology (RAT), Enterprise Data Platform (EDP)
- Tickets: DGOV-6338 (attribute lineage review), CHG-010442 (industry taxonomy refresh), INC-275019 (dedup anomaly), RITM-2026-44751 (catalog annotation update)
- Environment: Production (PRD), steady-state micro-batching

Parameter Table -- Run Context

Parameter	Value
Source System	MDM Client Master v7.9
Source Object	mdm.crm_client_master_current
Target System	Risk Analytics Repository (RAR) v5.4
Target Object	rar.dim_counterparty v5.4
Orchestrator Job ID	ORCH-EDP-9731
Micro-batch Cadence	5-minute windows
Monitoring Window (UTC)	2026-06-10T00:00Z-2026-06-15T23:59Z
Total Micro-batches	1,440
Successful Batches	1,440
Average Latency (ingest->RAR)	2m 37s
95th Percentile Latency	3m 11s
Lineage Graph ID	LG-2026-Q2-0103
Steward	A. Jabari (DGO)
Business Owner	Enterprise Risk
Classification	Internal; client identifiers hashed

Attribute-Level Lineage Summary

Target Attribute	Source Attribute(s)	Transformation Summ..	Null Policy	Steward

Referential Integrity (parent)	>= 99.50%	99.76%	Pass

Latency Distribution -- Micro-batch Timeliness

Time Window (UTC)	Batches	Avg Latency	95th Percentile	Notes
00:00-06:00	360	2m 28s	3m 01s	Normal
06:00-12:00	360	2m 41s	3m 13s	Peak catalog usage
12:00-18:00	360	2m 43s	3m 15s	Upstream MDM reindex..
18:00-23:59	360	2m 35s	3m 08s	Normal

Observations and Findings

- Uniqueness warning: 17 records flagged as potential duplicates on client_id_hash, concentrated in a single 5-minute window (2026-06-12T14:35Z). Root cause: upstream MDM survivorship rule timing during an enrichment cycle. Ticket INC-275019 raised by MDMO; corrective merge completed in next micro-batch. Lineage annotation appended to LG-2026-Q2-0103 with event tag "DUPE-2026-06-12-1435Z."
- Industry taxonomy refresh: CHG-010442 deployed 2026-06-11T02:00Z updated mdm_industry_code mappings (v2). Distribution shift observed: Financials sector rose by 0.4 percentage points; verified as expected outcome per change record. Column-level lineage updated to record mapping table artifact reference (IND-TAX-v2-2026-06).
- No schema drift: Source v7.9 and target v5.4 remained stable; 0 additive or breaking changes detected.

Lineage Controls and Evidence

- Column mapping count: 31 direct, 6 derived, 0 opaque.
- Transform registry checksums validated at 2026-06-15T00:10Z; all functions current.
- Event timeline anchored with run markers:
  - 2026-06-11T02:05Z: Taxonomy refresh checkpoint recorded (DGOV-6338 comment #14).
  - 2026-06-12T14:41Z: Dedup anomaly contained; micro-batch 884 reflowed by MDMO (no downstream corrective load required).
  - 2026-06-15T03:20Z: Final lineage export to catalog (RITM-2026-44751 completion).

Volume and Change Metrics

Metric	Value
Active Counterparties (end-of-window)	128,441
New Counterparties	1,912
Attribute Updates (non-key)	14,775

Deactivations	204
Late Arrivals (<= 24h)	53
Late Arrivals (> 24h)	0

Reconciliation Snapshot (RAR vs. MDM)

Metric	MDM Count	RAR Count	Variance	Status
Distinct client_id_hash	128,441	128,441	0	Pass
Records with parent link..	102,203	101,960	-243	Warn
PEP-flagged	2,114	2,114	0	Pass

Disposition of Variances

- Parent linkage variance (-243) aligned to ongoing ultimate parent normalization job (MDM nightly 01:00 UTC). RAT confirmed non-material impact to counterparty aggregation as surrogate parent assignments persisted. Informational watch added; no reprocessing triggered.

Stakeholder Reviews

- 2026-06-12 10:20 ET: CDS attribute-level lineage spot check completed (DGOV-6338). Outcome: Approved with note on taxonomy change visibility.
- 2026-06-13 16:05 ET: MDMO confirmation that survivorship timing guardrails remain within expected limits; attached to INC-275019.
- 2026-06-15 09:40 ET: RAT acceptance for Q2 reporting cycle; no SLA breaches (RAT-OPS-2026-337).

Data Classification and Privacy Handling

- Classification: Internal. Client identifiers stored and propagated as hashed surrogates for lineage reference; no direct personal identifiers present in scope for RAR.
- Catalog annotations updated to include derivation details for risk_rating_internal and industry_sector_code, de-emphasizing any sensitive operational attributes not material to risk aggregation.

SLA and Compliance

- Micro-batch SLA: 95% of batches under 4 minutes end-to-end. Achieved: 100% under 4 minutes; 95th percentile 3m 11s.
- Lineage completeness score: 100% for mapped attributes; 0 unmapped columns.
- All changes referenced to approved CHG-010442. No emergency changes during the monitoring window.

Notes

- Next review will include validation of parent linkage backfill post nightly normalization enhancement, slated for change window 2026-06-20 (CHG-010611). No impact anticipated to current lineage artifacts.

Page 23 -- Section 6.2: Domain Review -- Trade Execution Fact (TRD_EXEC_FACT)

Scope and objective

This section documents the end-to-end lineage verification, provenance checkpoints, and data quality outcomes for the Trade Execution Fact dataset (TRD_EXEC_FACT; schema: edw.trading) covering Q2 2026 (2026-04-01 through 2026-06-30). The review validates the continuity of lineage paths from market gateway intake through streaming ingestion, transformation, conformance, and warehouse publish, with downstream consumption in intraday P&L, regulatory reporting extracts, and T+1 risk aggregation. The objectives were to (1) confirm lineage graph currency in the Enterprise Catalog, (2) reconcile operational step logs against expected DAG topology, and (3) attest to provenance reproducibility for audit sampling.

Review metadata

Field	Value

Reviewers	S. Patel (DGC), N. Cho (EDP), R. Alvarez (TT)
Environments Covered	prod, dr (metadata parity)
Lineage Graph Version	LGV-2026Q2.04 (promoted 2026-06-27T18:14:03Z)
Attestation Status	Complete -- No material exceptions

Source-to-target lineage narrative

The current lineage graph represents an unchanged upstream schema for execution messages on Kafka topic tt.execs.v3 (Broker Group: TT-PROD-KF-A) emitted by the Market Gateway service (Service ID: TT-MGW-07). Streaming ingestion is handled by a managed Spark Structured Streaming job (Job Key: edp.sparx.ingest.trd.exec.v3, Run Profile: prod_hi_avail), persisting raw payloads to object storage (Storage Alias: mc-obj-trd-raw; Partition: dt=YYYY-MM-DD/HR=hh) with metadata envelopes (Event UUID v4, Source Partition, Ingest Offset). Conformance and enrichment are performed by edp.curate.trd.exec (DAG ID: DAG-TRD-EX-024), applying symbology normalization, venue code harmonization, and enrichment with CRM-derived client hierarchy keys before publishing to edw.trading.TRD_EXEC_FACT.

Operational step log excerpt (representative sampling)

Step Seq	Process Step	Engine	Start (UTC)	End (UTC)	Records In	Records Out	Status
001	Ingest: tt.execs.v3 ..	SparkStream	2026-05-17T04:00:..	2026-05-17T04:15:..	8,412,229	8,412,229	Succeeded
014	Conform: schema ..	SparkBatch	2026-05-17T04:30:..	2026-05-17T04:41:..	8,412,229	8,412,083	Succeeded
019	Enrich: client hiera..	SparkBatch	2026-05-17T04:41:..	2026-05-17T04:54:..	8,412,083	8,411,977	Succeeded
027	Deduplicate: event..	SparkBatch	2026-05-17T04:54:..	2026-05-17T04:57:..	8,411,977	8,411,972	Succeeded
033	Publish: edw.tradin..	Warehouse	2026-05-17T04:57:..	2026-05-17T05:02:..	8,411,972	8,411,972	Succeeded

Observations and findings

- Schema stability: No structural changes detected in upstream execution payloads during the window (Schema Fingerprint FP-TRD-EX-V3.12 persisted). Nullable fields exec_fee_amt and contra_party were <0.02% null across the quarter, below the 0.10% advisory threshold.
- Record volume: Quarter-to-quarter uplift of 3.4% in average hourly messages, tracking increased venue activity. No saturation events flagged by ingestion autoscaling.

- Data quality: Three minor, self-correcting spikes in conformance rejects (peak 0.007%) tied to late-arriving symbology updates. Automated retries reconciled within SLA.

Quality metrics summary (daily aggregates)

Metric	Q2 Target	Q2 Observed (P50/P95/Max)	Notes
Completeness (%)	>= 99.95	99.98 / 99.96 / 99.92	Two days at 99.92% due to lat..
Timeliness (min to publish)	<= 20	13 / 18 / 22	Two 22-min occurrences; rema..
Conformity error rate (%)	<= 0.05	0.016 / 0.041 / 0.054	Isolated peak on 2026-05-17 (..
Duplicate rate (ppm)	<= 10	2 / 6 / 8	Dedup window sufficient

Anomaly review -- 2026-05-17 timeliness/conformity

A transient elevation in timeliness (22 minutes to publish) correlated with a brief conformity error uptick (0.054%) at 04:30-05:00 UTC on 2026-05-17. Root cause analysis (RCA Ref: TT-RCA-2026-0517-EX) attributed the condition to a clock skew alert on a single upstream venue gateway (VG-ny4-a12) resulting in out-of-order sequence numbers for approximately five minutes. The late-arrival buffer and deduplication window absorbed the variance without data loss. Downstream impact analysis confirmed no effect on intraday risk or client reporting extracts; daily aggregates remained consistent post-reconciliation.

Provenance controls -- anonymization and sensitive attributes

The lineage attestation reconfirmed that trader identifiers and client-level sensitive fields are tokenized prior to publication into TRD_EXEC_FACT. The following parameterization remained in force during Q2 2026.

Anonymization parameters (reference only)

Attribute	Transformation	Parameter Set	Steward	Effective Since
trader_internal_id	Tokenization (stable)	TOK-TRD-2026Q1	DGC Privacy Office	2026-01-05T12:00:00Z
client_account_id	Hash (pepper+salt)	HSH-CLNT-2026Q2	DGC Privacy Office	2026-04-02T08:30:00Z

Downstream lineage confirmations

The downstream lineage edges to:

- risk.pnl_intraday_agg (CFG v2026.05)
- reg.mifid_exec_extract (CFG v2026.04)
- fin.recon_tplus1_bridge (CFG v2026.03)

were validated against LGV-2026Q2.04. Consumer schemas remained in sync; no transformation drift was detected. Sample-based replay (Provenance Replay Batch PRB-TRD-2026Q2-03) reproduced 100% of selected records by

Event UUID with identical dimensional joins.

Approvals and sign-off

- Data Owner (Trading): A. Romano -- Approved 2026-06-28T10:42:16Z
- Data Steward (DGC): S. Patel -- Approved 2026-06-28T11:05:03Z
- Platform Owner (EDP): L. Nguyen -- Approved 2026-06-28T12:17:55Z

No further actions are tracked for Q2 close. Carry-forward item: monitor venue gateway time synchronization metrics (Operational Health Review MC-TT-OPS-2291) as part of BAU oversight; not lineage-impacting.

Page 24 -- Section 6.3: Quality Assurance -- Client Master Dimension (CRM_CLIENT_DIM)

Scope and purpose

This section presents the lineage confirmation and quality assurance outcomes for CRM_CLIENT_DIM (schema: edw.crm). The review encompassed golden-record survivorship logic, source intake from CRM (Vantage), MDM hub, and Legal Entity Reference Data (LERD), and downstream consumption by Finance Allocations, Client Profitability, and Risk Limits. The goal was to verify that lineage edges accurately reflect updated survivorship and classification rules introduced in Q2 2026 and that key quality metrics met published SLAs.

Source system inventory

System	Connector	Feed ID	Schedule (UTC)	SLA (Delivery)
Vantage (CRM)	EDP CDC (API Bulk v2)	CRM-VNTG-CDC-01	Hourly at HH:20	<= 25 min lag
MDM Hub	EDP JDBC (Oracle)	MDM-ORCL-05	Hourly at HH:30	<= 30 min lag
Legal Entity (LERD)	EDP SFTP File Ingest	LERD-FILE-12	Daily at 02:00	By 02:30

Lineage overview

The lineage graph (CAT-CRM-0004; LGV-2026Q2.04) depicts three converging streams: (1) transactional CRM entities via CDC, (2) authoritative attributes from MDM for deduplication and survivorship, and (3) classification and hierarchy from LERD. The curation DAG edp.curate.crm.client_dim (DAG ID: DAG-CRM-CL-011) executes deterministic survivorship rules (source precedence: MDM > CRM; verified fields, including legal_name and tax_status, only supersede when MDM confidence >= 0.9). The publish step writes to edw.crm.CRM_CLIENT_DIM (v2026.06) with dimensional SCD2 handling and audit columns (effective_ts, end_ts, change_hash).

Change summary -- Q2 mapping updates

Release MC-EDP-10493 (promoted 2026-06-20T19:12:45Z) introduced:

- Revised legal_entity_type mapping to align with updated LERD taxonomy (LERD v2026.2).
- Added normalization for country codes adopting ISO 3166-1 alpha-2 canonical forms.
- Extended survivorship to include mkt_segment when MDM confidence >= 0.85 and CRM recency <= 24h.

Configuration registry entry

Config Key	Version	Effective From (UTC)	Owner

Findings

- Post-release alignment: No discrepancies found between lineage graph edges and actual operational logs. All edges introduced by MC-EDP-10493 reflect accurate source-to-transform mappings with stable vertex identifiers.
- Survivorship effectiveness: Sampling confirmed precedence rules applied deterministically. No evidence of oscillation between MDM and CRM sources across consecutive runs.
- Conformity uplift: Country code normalization eliminated residual non-canonical codes; observed P95 drift improved by 0.03% versus Q1 baseline.

Downstream lineage and consumer impact

The CRM_CLIENT_DIM downstream edges to:

- fin.allocations.client_basis (CFG v2026.05)
- risk.limits_client_profile (CFG v2026.03)
- mkt.analytics.client_segment_rollup (CFG v2026.04)

were revalidated through targeted joins and key integrity checks. No breakages occurred; join selectivity and referential coverage remained within historical intervals.

Lineage edge map -- delta summary (pre vs post MC-EDP-10493)

From Node	To Node	Count Change	Net Effect
LERD-FILE-12	crm.client_dim.legal_type.map	+1	New mapping link
crm.client_dim.survivorship.rul..	edw.crm.CRM_CLIENT_DIM	0	No change
edp.conform.country.iso_norm	edw.crm.CRM_CLIENT_DIM	+1	New transform
MDM-ORCL-05	edp.curate.crm.client_dim	0	No change

Data protection and provenance notes

Sensitive client attributes in CRM_CLIENT_DIM remain subject to masking or tokenization per DGC policy. The report confirms that masked fields are consistently propagated in downstream extracts, and that provenance bundles (hash manifests and configuration references) are retained for seven years (Provenance Pack PRV-CRM-00122, effective 2026-06-20T19:12:45Z).

Exceptions and resolutions

- Exception EX-CRM-2026-044: Two records exhibited transient non-canonical country codes in the hour preceding the configuration cutover. Automated normalization corrected the values on the next cycle; no manual action required. Status: Closed 2026-06-21T08:05:11Z.
- Exception EX-CRM-2026-047: One survivorship conflict flagged due to near-equal confidence scores from MDM and CRM on mkt_segment. Tie-breaker logic (recency) applied as designed. Status: Closed 2026-06-23T10:17:22Z.

Approvals and next steps

- Data Owner (Client Data): J. Carver -- Approved 2026-06-25T14:32:18Z
- Data Steward (DGC): P. Mensah -- Approved 2026-06-25T15:06:51Z
- Platform Owner (EDP): R. Shah -- Approved 2026-06-25T15:44:29Z

Planned activity for Q3: Incorporate LERD subdivision codes (optional attribute) into CRM_CLIENT_DIM with non-key status; lineage update ticket MC-EDP-10812 scheduled for design review in July. No risk to current lineage integrity identified.

Page 25 -- Data Lineage and Provenance Report -- Q2 2026 -- Meridian Capital

Section 7.2: Lineage Validation Cycle (Risk and Finance Aggregations)

Overview

Between 2026-06-10 and 2026-06-18, the Enterprise Data Platform (EDP) Lineage Services team executed the scheduled Q2 lineage validation for consolidated finance reporting and daily risk exposure aggregates. The review focused on two principal curated datasets and their underpinning source-to-target mappings: MC_FIN_GL_CONSOLIDATED_V5 and MC_RISK_EXPOSURE_DAILY_V4. The exercise confirmed end-to-end traceability for 99.82% of sampled records across ingestion, mastering, transformation, and publication stages. Minor variances were observed in the attribution of instrument sector codes, attributable to late-arriving reference data. Data Governance Office (DGO) approved remediation steps under existing standards without policy exceptions.

Parameters -- Lineage Scan Batch C (2026-06-14)

- Scan ID: LING-SCAN-20260614-C
- Window Start (UTC): 2026-06-14T00:00:00Z
- Window End (UTC): 2026-06-14T23:59:59Z
- Environment: Production (EDP-PROD)
- Owning Team: EDP Lineage Services
- Data Domains: Finance (General Ledger), Market Risk (Exposure)
- Target Datasets:
  - MC_FIN_GL_CONSOLIDATED_V5 (Curated Zone)
  - MC_RISK_EXPOSURE_DAILY_V4 (Analytics Zone)
- Upstream Sources:
  - SRC_GL_SUBLEDGER_V12 (Accounting Subledger)
  - SRC_TRADE_WAREHOUSE_V9 (Trade Lifecycle)
  - REF_INSTRUMENT_MASTER_V7 (Reference Data)
- Standards Referenced: DGO-METADATA-STD-04, DQS-PROFILE-STD-07, DGO-LINEAGE-STD-11
- Related Tickets:
  - Change: CHG-EDP-7421 (Mapping refresh for sector enrichment)
  - Incident: INC-EDP-56302 (Late reference feed on 2026-06-12)
  - Governance Review: MC-DGO-2147 (Quarterly lineage sign-off)

Summary of Findings

- MC_FIN_GL_CONSOLIDATED_V5: All materialized journal lines retained deterministic lineage to SRC_GL_SUBLEDGER_V12 with 100% key attribution for business unit, account, and currency dimensions. 14 of 18 enrichment attributes carried Rule Pack BRP-FIN-ENR-03 provenance markers. Four attributes (sector_code, risk_weight_override, region_bucket, and counterparty_rating_band) were appropriately flagged as externally sourced from REF_INSTRUMENT_MASTER_V7 with XFR-FIN-SEC-022 references. No orphan records observed.
- MC_RISK_EXPOSURE_DAILY_V4: 99.76% of exposure measures traced to SRC_TRADE_WAREHOUSE_V9 events with consistent valuation timestamps. 0.24% flagged as "Pending Recalc" due to timestamp skew with market close events during 2026-06-13 weekend adjustments. Data Quality Services (DQS) validated that the skew did not breach reporting thresholds for T+1 risk summaries.

Steps -- Trace Walkthrough for Sample Record TRD-20260315-009382

- Step 1
  - Component: Ingestion -- Trade Warehouse Connector
  - Control ID: CTL-ING-TRD-3119
  - Input Dataset: SRC_TRADE_WAREHOUSE_V9 (partition_dt=2026-03-15)
  - Outcome: Success
  - Timestamp (UTC): 2026-03-15T02:17:31Z
- Step 2
  - Component: MDM Resolution -- Counterparty and Instrument Linking
  - Control ID: CTL-MDM-RES-2044
  - Business Rule: BRP-MDM-CPY-05 (counterparty canonicalization)
  - Outcome: Matched to CPY-00045377; Instrument IMID-ISIN-US1234567890
  - Timestamp (UTC): 2026-03-15T02:28:06Z
- Step 3
  - Component: Transformation -- Exposure Calculation
  - Control ID: CTL-XFR-RISK-4412
  - Transformation Spec: XFR-RISK-EXP-114 (delta-adjusted exposure)
  - Outcome: Calculated exposure_usd=2,414,355.12; valuation_ts=2026-03-15T21:00:00Z
  - Timestamp (UTC): 2026-03-15T21:05:12Z
- Step 4
  - Component: Publication -- MC_RISK_EXPOSURE_DAILY_V4
  - Control ID: CTL-PUB-ANL-1398
  - Partition: dt=2026-03-15, desk=EQD_NA
  - Outcome: Record published; lineage markers embedded (LING-MARK v2.8)
  - Timestamp (UTC): 2026-03-15T21:06:55Z

Data Quality Profile -- Batch C (selected metrics)

- Completeness (key fields):
  - MC_FIN_GL_CONSOLIDATED_V5: 100.00% for account_id, business_unit_id; 99.95% for cost_center_id (13 missing values with "Unknown" default applied per DGO-DEF-02).
  - MC_RISK_EXPOSURE_DAILY_V4: 99.98% for trade_id; 100.00% for valuation_ts.
- Timeliness:
  - GL Consolidation: Average availability T+1 06:35 UTC (SLA 07:00 UTC; 100% met).
  - Risk Exposure: Average availability T+1 02:41 UTC (SLA 03:00 UTC; 98.7% met; one outlier on 2026-06-13 due to upstream reference delay).
- Accuracy (spot checks vs. authoritative sources):
  - Currency conversion rates: 100% alignment with REF_FX_DAILY_V6 for sample size n=1,000.
  - Sector classification: 99.62% alignment; 38 records deferred pending REF_INSTRUMENT_MASTER_V7 late update.

Parameters -- Provenance Capture Configuration

- Provenance Spec Version: LING-PROV-STD v2.8.3
- Capture Mode: Field-level with operation IDs, sample density 100% for keys, 5% for non-key enrichments
- Storage Class: Curated metadata store (EDP-META-PROD), retention 3 years per ILM-RET-04
- Hashing Algorithm for record anchors: SHA-256
- Orchestration: edp-orch runtime v5.12.0
- Observability: lineage-events stream, topic lineage.prod.v2

Operational Outcomes and Approvals

- DGO Review Board Meeting: 2026-06-18T14:00-14:45 UTC (Minutes Ref: DGO-MIN-20260618-03). Approval granted for CHG-EDP-7421 to promote XFR-FIN-SEC-023 (sector enrichment fallback tuning) to production on 2026-06-22.
- Incident INC-EDP-56302: Resolved 2026-06-13T04:12 UTC by Metadata Engineering after REF_INSTRUMENT_MASTER_V7 journaling delay. Root cause recorded as "supplier cutover backlog"; no recurrence observed.
- Steward Sign-offs:
  - Finance Reporting COE Steward: FR-STW-008 (approval recorded 2026-06-18T15:12 UTC)
  - Risk Analytics Steward: RA-STW-004 (approval recorded 2026-06-18T15:20 UTC)

SLA Tracking -- Publication Windows (2026-06-10 to 2026-06-18)

- MC_FIN_GL_CONSOLIDATED_V5
  - SLA: T+1 by 07:00 UTC
  - Achieved: 7/7 days within SLA; mean 06:35 UTC; p95 06:42 UTC
- MC_RISK_EXPOSURE_DAILY_V4
  - SLA: T+1 by 03:00 UTC
  - Achieved: 6/7 days within SLA; mean 02:41 UTC; p95 02:57 UTC; exception 2026-06-13 at 03:21 UTC

Remediation Notes

- Sector code variances: 38 records across EQD_NA and FI_EMEA desks set to sector_code="Unclassified" for 24 hours pending late reference load. Corrected automatically post-refresh with backfill batch REF-BKF-20260613-A at 05:05 UTC. No downstream adjustments required per Finance Reporting COE assessment.

Page 26 -- Data Lineage and Provenance Report -- Q2 2026 -- Meridian Capital

Section 7.3: Reconciliation and Cross-System Alignment

Overview

A reconciliation audit was conducted to verify conformance of curated outputs to authoritative sources and to confirm traceable provenance at record and attribute levels. The review covered GL-to-subledger congruence for MC_FIN_GL_CONSOLIDATED_V5 and exposure-to-trade congruence for MC_RISK_EXPOSURE_DAILY_V4. Stratified sampling by desk, currency, and notional band delivered 95% confidence at +/-2.5% margin for non-key attribute checks and full-population scans for key identifiers and timestamps.

Parameters -- Sampling and Scope

- Audit ID: REC-20260616-GL-RISK
- Audit Window (UTC): 2026-06-12T00:00:00Z to 2026-06-16T23:59:59Z
- Sampling Strategy: Stratified random sampling
- Strata:
  - Desk: EQD_NA, FI_EMEA, CRD_APAC
  - Currency: USD, EUR, JPY, GBP
  - Notional Bands: [0-1m], (1m-50m], (50m-250m], >250m
- Sample Sizes:
  - GL Lines (non-key attributes): n=5,000 across strata
  - Risk Exposures (valuation attributes): n=7,500 across strata
  - Keys and timestamps: 100% full scan
- Acceptance Criteria:
  - Key field congruence: 100% required
  - Non-key attributes: >=99.5% match to authoritative sources or documented derivation rules
  - Timeliness: >=99% within SLA windows
- Stakeholders: Finance Reporting COE, Risk Analytics, DQS, Metadata Engineering, DGO

Reconciliation Results -- GL vs. Subledger

- Key Alignment:
  - account_id, business_unit_id, gl_date: 100% aligned for full population of 1,284,311 lines in the window.
- Amounts and Signs:
  - debit_amount and credit_amount matched subledger with 99.97% concordance; 334 lines differed by rounding <=0.01 due to currency precision in BRP-FIN-ROUND-02; documented and accepted.
- Enrichment Fields:
  - sector_code: 99.58% aligned after backfill; 540 lines carried "Unclassified" for <24 hours; subsequently corrected; lineage markers show REF_INSTRUMENT_MASTER_V7 late-arrival flag set true.
  - counterparty_rating_band: 99.91% aligned; 1,139 lines flagged as "Not Rated" consistent with BRP-FIN-RISK-08 defaults for unrated counterparties.

Reconciliation Results -- Risk Exposure vs. Trade Warehouse

- Trade Linkage:
  - trade_id and lifecycle_event_id alignment: 99.98% for 2,906,441 exposure records; 585 records flagged as "Pending Recalc" attributed to weekend valuation window shift; corrected in T+2 cycle automatically.
- Valuation Timestamp Check:
  - valuation_ts vs. market_close_ts: 99.76% within +/-5 minutes policy window per DGO-TIME-STD-03; outliers traced to daylight saving transition handling on 2026-06-13; all have lineage markers with CTL-XFR-RISK-4412 and exception code EXC-TIME-DS-01.
- Measure Consistency:
  - exposure_usd recomputation spot-check on n=7,500: 99.93% within tolerance +/-0.05%; 5 cases exceeded tolerance linked to missing intraday FX granules; cross-referenced to REF_FX_INTRADAY_V3 delay; marked non-material.

Process Log -- Reconciliation Pass 3 (Final)

- 2026-06-16T08:10:12Z | EDP Lineage Services | Started REC-20260616-GL-RISK Pass 3 with approved thresholds.
- 2026-06-16T08:35:44Z | DQS | Loaded comparison extracts for SRC_GL_SUBLEDGER_V12 and MC_FIN_GL_CONSOLIDATED_V5 (batch tag COMP-GL-0616-03).
- 2026-06-16T09:02:19Z | Risk Analytics | Executed exposure recompute sample set (tag COMP-RISK-0616-03).
- 2026-06-16T09:28:07Z | Metadata Engineering | Validated lineage anchors (SHA-256 hash concordance 100% on keys).
- 2026-06-16T09:55:51Z | DGO | Applied acceptance criteria and closed exceptions that met derivation rules.
- 2026-06-16T10:12:06Z | EDP Lineage Services | Pass 3 status: Complete; residual exceptions logged to backlog for Q3 tuning.

Pipeline and Component Versions -- Audit Context

- edp-ingest: 3.14.2
- mdm-resolve: 2.9.1
- xfr-fin-sec: 4.6.0 (promotion scheduled via CHG-EDP-7421 on 2026-06-22)
- xfr-risk-exp: 5.2.4
- pub-curated: 1.18.3
- lineage-capture: 2.8.3
- dqs-profile: 3.7.0
- orchestration-runtime: 5.12.0

Metadata Curation and Stewardship

- Glossary Terms Tagged:
  - "Consolidated Journal Line" (GLSS-TERM-00124)
  - "Exposure Measure (USD)" (GLSS-TERM-00387)
  - "Sector Code (Reference Data)" (GLSS-TERM-00211)
- Data Classes:
  - Financial Transaction Non-PII (CLASS-FIN-NPII-01)
  - Market Reference Non-PII (CLASS-MREF-NPII-02)
- Steward Assignments:

    - Finance: FR-STW-008 (primary), FR-STW-012 (delegate)
    - Risk: RA-STW-004 (primary)
- ILM and Retention:
    - Curated GL lines: 7 years (ILM-RET-04), immutable after T+5
    - Daily exposures: 5 years (ILM-RET-06), mutable for T+2 correction window
- Catalog Entries Updated:
    - MC_FIN_GL_CONSOLIDATED_V5 (CAT-ENTRY-000943) -- lineage graph refreshed 2026-06-16T11:05 UTC
    - MC_RISK_EXPOSURE_DAILY_V4 (CAT-ENTRY-000877) -- provenance edges appended for EXC-TIME-DS-01 events

Exception Register -- Residual Items (logged for Q3)

- BACKLOG-EDP-11802: Daylight saving variance handling enhancement in xfr-risk-exp; owner: Risk Analytics; target: 2026-08-15.
- BACKLOG-DQS-7741: Rounding policy alignment for multicurrency postings where sub-cent values emerge; owner: DQS; target: 2026-08-01.
- BACKLOG-DGO-3320: Clarify acceptance threshold wording for "Not Rated" counterparties in BRP-FIN-RISK-08; owner: DGO; target: 2026-07-30.

SLA and Timeliness Review -- Audit Window

- GL Consolidation:
    - T+1 availability: 100% within SLA; earliest 06:21 UTC; latest 06:44 UTC; no breaches.
- Risk Exposure:
    - T+1 availability: 98.5% within SLA; one partial breach due to reference data delay; exception approved (APP-EXC-20260613-01) with documented non-materiality.

Approvals and Communications

- Governance Approval: DGO-APP-20260616-GLRISK signed by DGO Chair (2026-06-16T12:02 UTC)
- Stakeholder Communication:
    - Memo FR-RA-20260616-01 issued to Finance Reporting COE and Risk Analytics summarizing residual exceptions and Q3 actions.
- Ticket Closure:
    - INC-EDP-56302: Closed 2026-06-13T04:12 UTC
    - CHG-EDP-7421: Scheduled; pre-implementation review completed 2026-06-19T10:30 UTC (CAB minutes CAB-MIN-20260619-02)

Key Takeaways

- End-to-end lineage for key identifiers and timestamps is complete and verifiable via embedded markers and control IDs across both datasets.
- Observed variances are traceable to documented timing conditions (late reference loads, daylight saving transitions) and handled within existing governance frameworks.
- No policy exceptions were requested or required. All remediation steps align with approved standards and will be monitored in Q3 cycle health checks.

Page 27 -- Data Lineage and Provenance Report -- Q2 2026 -- Meridian Capital

Section 9.4: Client Profitability Cube (CPC) End-to-End Lineage Review (June 2026 Window)

Overview

The Client Profitability Cube (CPC) aggregates trade economics, fee accruals, and allocation keys to support client-level profitability analytics in the Finance Analytics domain. For Q2 2026, the lineage review covered the period 2026-06-01 to 2026-06-30 and verified continuity from origination systems through curated warehouse zones to the semantic cube. No material breaks were identified. Minor data drift related to rounding behavior in fee allocation was observed and is tracked under MC-DQ-4782 (closed).

Run Context -- CPC Validation Window

- Review period: 2026-06-01 to 2026-06-30 (inclusive)
- Execution timezone: America/New_York (EDT, UTC-4)
- Business sponsor: Finance Analytics (FA)
- Data Engineering lead: Platform Data Engineering (PDE)
- Quality oversight: Data Quality Office (DQO)
- Reference change window: RFC-2026-0618 (approved 2026-06-18 21:00 EDT)

Parameter Table -- CPC Lineage Review Run (Validation Suite v3.12)

- Run ID: CPC-LIN-VAL-2026-06-30-01
- Orchestrator: Airflow DAG fin_cpc_dag v1.42
- Transform library: cpc_transform v14.3.2 (hash 8f7a4c2...f1)
- Storage zones: LZ-PROD -> STG_FIN -> CUR_FIN -> WH_FIN -> SEM_CUBE
- Executors: Spark3 pool FIN-PRD-SPK-02
- Data window: trade_date >= 2026-06-01 and <= 2026-06-30
- Reprocess flag: False (incremental)
- Record scope: Trades (equities/fixed income), Fees (billing core), Allocations (client key), FX daily (market data)
- Teams involved: PDE, FA Reporting, DQO, MDM Operations
- Ticket bundle: MC-DATA-21458 (coordination), MC-DQ-4782 (variance), MC-MDM-3391 (reference sync)
- Timestamped approval: 2026-07-02 09:11:34 EDT by FA Controller's Office

Hop-by-Hop Lineage Map Snapshot (Observed on 2026-07-02)

- Hop: 1

Upstream dataset: OMS_TRADE_BLOTTER_TB2 (source: OMS-PRD-02)

Process/Job ID: LZ-INGEST-OMS-TB2-2026-06

Target dataset: LZ_FIN_TRADE_RAW_202606

Row count in: 18,492,311

Row count out: 18,492,311

Loss %: 0.00

Primary key basis: trade_id, leg_id

Note: Late-arriving corrections scheduled T+2; not in scope for June window.

- Hop: 2

Upstream dataset: BILLING_FEECORE_FAF (source: FEECORE-PRD)

Process/Job ID: LZ-INGEST-FEE-FAF-2026-06

Target dataset: LZ_FIN_FEE_RAW_202606

Row count in: 2,931,007

Row count out: 2,931,007

Loss %: 0.00

Primary key basis: fee_event_id

Note: Referential tie via account_id.

- Hop: 3

Upstream dataset: MDM_CLIENT_MASTER_CM3

Process/Job ID: STG-REF-MDM-CM3-2026-06

Target dataset: STG_FIN_CLIENT_DIM_202606

Row count in: 51,204

Row count out: 51,204

Loss %: 0.00

Primary key basis: client_surrogate_key

Note: Golden record survivorship applied by MDM.

- Hop: 4

Upstream dataset: LZ_FIN_TRADE_RAW_202606

Process/Job ID: STG-TRADE-NORMALIZE-v9.8

Target dataset: STG_FIN_TRADE_NORMALIZED_202606

Row count in: 18,492,311

Row count out: 18,492,311

Loss %: 0.00

Primary key basis: trade_id

Note: Type casting and ENUM harmonization.

- Hop: 5

Upstream dataset: STG_FIN_TRADE_NORMALIZED_202606, LZ_FIN_FEE_RAW_202606

Process/Job ID: CUR-CPC-JOIN-FEES-v14.3.2

Target dataset: CUR_FIN_TRADE_FEES_202606

Row count in: 21,423,318

Row count out: 18,517,992

Loss %: 13.56 (expected join drop)

Primary key basis: trade_id, fee_event_id

Note: Left join from trades; unmatched fees backlogged to exception set.

- Hop: 6

Upstream dataset: CUR_FIN_TRADE_FEES_202606, STG_FIN_CLIENT_DIM_202606, MV_RATES_DAILY_202606

Process/Job ID: WH-CPC-AGGREGATE-v10.1

Target dataset: WH_FIN_CPC_FACT_202606

Row count in: 18,517,992

Row count out: 2,141,339

Loss %: n/a (aggregation)

Primary key basis: composite (client_key, product, trade_date)

Note: FX normalization to USD at T+1 close.

- Hop: 7

Upstream dataset: WH_FIN_CPC_FACT_202606

Process/Job ID: SEM-CPC-PUBLISH-v7.2

Target dataset: SEM_CUBE_CPC_202606

Row count in: 2,141,339

Row count out: 2,141,339

Loss %: 0.00

Primary key basis: cube grain

Note: Semantic layer partitions: by client, product, month.

Reconciliation Results (CPC June Window)

- Metric: Trade count coverage (SEM vs WH)

Expected: 100.0%

Actual: 100.0%

Variance: 0.0%

Threshold: >= 99.5%

Status: Pass

- Metric: Fee attribution coverage (matched fees vs total fees)

Expected: >= 84.0%

Actual: 86.7%

Variance: +2.7%

Threshold: >= 80.0%

Status: Pass

- Metric: Client key resolve rate (trades with client key)

Expected: >= 99.0%

Actual: 99.3%

Variance: +0.3%

Threshold: >= 98.5%

Status: Pass

- Metric: FX normalization timeliness (available by T+1 10:00 EDT)

Expected: 100.0%

Actual: 100.0%

Variance: 0.0%

Threshold: 100.0%

Status: Pass

Observations and Findings

- The join drop in Hop 5 (13.56%) aligns with historical seasonal patterns driven by fee events that are billed at period end and do not reference individual trades. Exception set (2,905,326 rows) is consistent with the May 2026 profile (+0.2% variance).
- Minor rounding drift detected in fee allocation at three-decimal places in CUR_FIN_TRADE_FEES_202606 for a subset of fixed income trades. The drift netted to $0.00 at client-month granularity and did not affect published CPC values.

Ticket Register (June 2026 CPC Lineage)

- Ticket ID: MC-DQ-4782

Opened: 2026-06-24 14:26 EDT

Closed: 2026-06-28 10:03 EDT

Owner: DQO (A. Venkataraman)

Summary: Fee allocation rounding drift (v14.3.2)

Impact: Non-material; < 0.001% variance pre-rounding

Resolution: Standardized rounding scale to 4dp pre-aggregation; validated with FA Reporting. No republish required.

- Ticket ID: MC-MDM-3391

Opened: 2026-06-18 08:41 EDT

Closed: 2026-06-20 12:37 EDT

Owner: MDM Operations

Summary: Client merge wave 2026-W25

Impact: New surrogate keys assigned; lineage remap needed

Resolution: Remap applied in STG_FIN_CLIENT_DIM_202606 per change note CN-2026-0619; lineage continuity maintained.

Compliance and Controls

- PII handling: CPC pipelines operate on pseudonymized client keys (client_surrogate_key). No direct PII fields present in CUR_FIN or WH_FIN zones for CPC scope. Pseudonymization verified under DLP scan report DLP-FA-2026-06-29 (zero findings).
- Retention and audit: Raw landing artifacts retained 7 years (WORM policy FIN-RET-7Y). Transformation manifests and hash checks recorded in MC Vault; see Provenance Artifact IDs below on Page 28.

Conclusion

The CPC lineage from OMS/FEECORE/MDM through semantic publication is intact for the June 2026 window. All reconciliation metrics are within thresholds. Identified issues were logged and closed with no downstream republish. Certification for CPC June 2026 is marked "Green" by FA Controller's Office as of 2026-07-02.

Section 9.5: Field-Level Derivations and Provenance Stamps -- CPC fact_profitability

Derivation Register (Selected Columns)

- Column: client_key

Source field(s): STG_FIN_CLIENT_DIM_202606.client_surrogate_key

Transformation: Direct carry-forward (1:1), deterministic

Lineage cert: LIN-CERT-2026-CPC-001

Last change ticket: MC-MDM-3391 (merge mapping)

- Column: trade_date

Source field(s): STG_FIN_TRADE_NORMALIZED_202606.trade_execution_date

Transformation: Date truncation to UTC day boundary

Lineage cert: LIN-CERT-2026-CPC-002

Last change ticket: MC-DATA-20791 (time zone standardization)

- Column: product_family

Source field(s): STG_FIN_TRADE_NORMALIZED_202606.asset_class, product_code

Transformation: Map via REF_PRODUCT_LOOKUP v6.1

Lineage cert: LIN-CERT-2026-CPC-003

Last change ticket: MC-REF-11277 (lookup expansion)

- Column: gross_pnl_usd

Source field(s): STG_FIN_TRADE_NORMALIZED_202606.gross_pnl_native, MV_RATES_DAILY_202606.usd_rate

Transformation: gross_pnl_native / usd_rate, scale 4dp pre-agg

Lineage cert: LIN-CERT-2026-CPC-004

Last change ticket: MC-DQ-4782 (rounding scale clarification)

- Column: allocated_fee_usd

Source field(s): LZ_FIN_FEE_RAW_202606.fee_amount_native, allocation_key, MV_RATES_DAILY_202606.usd_rate

Transformation: fee_amount_native * allocation_key / usd_rate

Lineage cert: LIN-CERT-2026-CPC-005

Last change ticket: MC-DATA-21458 (allocation key refresh)

- Column: net_profit_usd

Source field(s): gross_pnl_usd, allocated_fee_usd

Transformation: gross_pnl_usd - allocated_fee_usd

Lineage cert: LIN-CERT-2026-CPC-006

Last change ticket: MC-FA-9321 (semantic rename)

Audit Sampling Method

The DQO selected a stratified random sample of 500 records from WH_FIN_CPC_FACT_202606 across client deciles, asset classes, and trade dates. Field-level recomputation checks were performed independently using frozen reference snapshots (MV_RATES_DAILY_202606 as-of 2026-06-30 23:59 UTC). All computations matched within tolerance (absolute difference <= 0.0001 USD).

Duration: 00:06:31

Notes: Partition 2026-06 successfully committed.

Provenance Artifacts and Retention

- Artifact type: Transformation manifest

Identifier: MFST-CPC-2026-06-30-01

Store: MC Vault (PRD)

Retention policy: 7 years (FIN-RET-7Y)

Retrieval: ServiceNow request SN-REQ-2026-44719 (FA Controller approval)

- Artifact type: Checksum bundle (input/output)

Identifier: CHK-CPC-2026-06 (trunc: 9a6d...3b)

Store: MC Vault (PRD)

Retention policy: 7 years

Retrieval: ServiceNow request SN-REQ-2026-44720

- Artifact type: Data contract (CPC v4.2)

Identifier: DC-CPC-4.2-2026Q2

Store: Contract Registry

Retention policy: Evergreen until superseded

Retrieval: ServiceNow request SN-REQ-2026-44503

Certification and Attestations

- Lineage certification: LIN-CERT-2026-CPC (renewed 2026-07-02; valid through 2026-09-30)
- Owner attestation: FA Controller's Office (2026-07-02 09:14 EDT), confirms CPC June 2026 publication reflects approved methodologies and mappings.
- DQO assurance: DQO Memorandum DQO-CPC-2026-06 (2026-07-02), states all rules within thresholds; exceptions documented and closed.

Planned Enhancements (Q3 2026)

- Allocation methodology note: Introduce explicit allocation_method dimension to distinguish event-based vs proportional fees (MC-FA-9584).
- Reference linkage improvement: Expand account-to-client bridge to include historical effective dating for intra-month merges (MC-MDM-3510).
- Observability uplift: Add hop-level row footprint telemetry to SEM-CPC-PUBLISH for faster anomaly triage (MC-OBS-2217).

Conclusion

Field-level derivations for CPC are stable and fully traceable to approved reference sources. Provenance artifacts are current and retrievable under standard governance processes. With Q2 metrics within expected bands and all variances resolved, CPC lineage remains certified for financial analytics consumption.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 29

Section 10. Cross-Domain Lineage Verification -- Liquidity Risk Mart (LRM)

Overview

Between 2026-06-24 and 2026-06-28, the Enterprise Data Office (EDO) coordinated a focused lineage verification of the Liquidity Risk Mart (MER_LRM_MART) spanning Trade Capture (front-office), Settlements (operations), and Reference Data domains. The objective was to confirm traceability for daily liquidity buffer calculations used by the Treasury Risk function, validate conformity to the LRM data contract (v2.3.1), and log evidence supporting quarterly control attestations. Activities were tracked under Jira epic MC-EDO-7421 with child tasks MC-EDO-7442 (lineage completeness), MC-EDO-7443 (provenance artifact checks), and MC-EDO-7444 (quality thresholds).

Verification Parameters

- Window: 2026-06-01 through 2026-06-14 (inclusive), daily batches
- Environment: PROD (Region A)
- Change Window Ref: CHG0019847 (Approved: 2026-06-20 10:15 UTC)
- Coordinating Teams: EDO; Risk Analytics Engineering (RAE); Finance Data Services (FDS); Data Governance & Stewardship (DGS)
- Primary Datasets:
  - ODS_TRADE_CAPTURE (v5.18)
  - SETTLEMENTS_LEDGER (v3.07)
  - REF_COUNTERPARTY (v4.02)
  - MER_LRM_STAGING (v2.3.1)
  - MER_LRM_MART (v2.3.1)
- Controls Evaluated:
  - C-EDL-005 Lineage Completeness
  - C-EDL-011 Provenance Immutability
  - C-DQ-021 Referential Integrity (Counterparty)
  - C-DQ-033 Timeliness (T+1 SLA)
- Tooling & Artifacts:
  - Lineage Graph IDs LG-2026Q2-0134 through LG-2026Q2-0141
  - Provenance Manifests PRV-LRM-2026Q2-0007 to -0010
  - Release Tags: RAE_LRM_ETL_2026.06.2; FDS_REF_SYNC_2026.06.1

Execution Summary

The verification was executed as a pre-attestation cycle and did not alter production data. RAE provided read-only lineage graph snapshots; FDS validated reference data joins; DGS oversaw data contract adherence. All activities were logged in ServiceNow task group TSK00112988 (parent change CHG0019847). No control failures were recorded. Two minor variances were logged as observations with remediation due in Q3 2026.

PRV-LRM-2026Q2-00..	2026-06-14	QC Evidence	43a6c4c1d27e	MER_LRM_MART:DQ..	Verified

Findings and Observations

- Finding F-2026Q2-LRM-01 (Closed, 2026-06-28): Historical edge deprecation. Two edges referencing SETTLEMENTS_LEDGER v3.06 persisted in LG-2026Q2-0134. The paths were correctly superseded by v3.07 as of 2026-05-29. DGS confirmed metadata refresh during S01 resolved the discrepancy. Evidence: EL-REF-7612.
- Observation OB-2026Q2-LRM-02 (Open, target Q3): One unmatched alias in REF_COUNTERPARTY for legal_entity_key 'LE-102298' due to concurrent legal name consolidation. Data is accurate; lineage alias resolution incomplete. Jira: MC-DGS-5594. Risk: Low (no quantitative impact on liquidity metrics).
- Observation OB-2026Q2-LRM-03 (Open, target July): Timeliness variance on 2026-06-07 batch with completion at T+1 07:24 UTC (SLA T+1 07:00). Delay originated in upstream ODS_TRADE_CAPTURE watermark checkpointing. ServiceNow INC00241219, assigned to FDS. No downstream breach for daily liquidity reporting (Treasury cutoff 08:00 UTC).

Control Results

- C-EDL-005 Lineage Completeness: Pass. Threshold >= 97% node and edge coverage met on all sampled days. Exceptions logged and tied to deprecation scenario (non-impacting).
- C-EDL-011 Provenance Immutability: Pass. All sampled manifests present, signed, and hash-matched with registry entries; retention policies validated (policy reference DG-Retention-04).
- C-DQ-021 Referential Integrity: Pass with observation. Join between MER_LRM_STAGING and

REF_COUNTERPARTY showed 0.07% transient null counterparty_id on 2026-06-10 (10 of 14,251 records), subsequently resolved within the same processing cycle.

- C-DQ-033 Timeliness: Pass with variance on one day (2026-06-07), within quarterly allowed tolerance (<=2 variances per quarter).

Evidence Packaging

The evidence set (EL-PKG-LRM-2026Q2-0003) includes lineage snapshots, manifest hashes, control attestations, and cross-check outputs. Secure custody was logged under Evidence Locker EL region A, container EL-LRM-Q2-2026, receipt timestamp 2026-06-28 14:06:38 UTC. Access approvals are recorded under AAR-2026-EL-3381 (EDO Director, RAE Lead, DGS Steward).

Next Actions

- DGS to close MC-DGS-5594 upon alias resolution and confirm lineage graph update in July maintenance window (CHG0020149).
- FDS to review watermark scheduling variance (INC00241219) and update scheduler metadata mapping for T+1 projection fields (tracking: MC-FDS-6802).
- EDO to expand coverage sample to include end-of-quarter burst loads (June 28-30) in the Q3 lineage verification.

Attestation Statement

Pursuant to Meridian Capital's Enterprise Data Lineage Standard (EDL-STD-02) and the Q2 2026 reporting cycle, the designated stewards and engineering leads attest that:

- End-to-end lineage for the Liquidity Risk Mart from Trade Capture and Settlements through curated outputs is accurately represented in lineage artifacts for the sampled period.
- Provenance manifests are complete, immutable, and reconciled to published datasets.
- Data quality controls relevant to liquidity reporting operated effectively, with documented observations not materially impacting reporting outcomes.

Scope Clarifications

- This attestation covers daily batches 2026-06-01 through 2026-06-14. End-of-quarter burst loads (2026-06-28 to 2026-06-30) are scheduled for verification in Q3 2026 per MC-EDO-7444.
- Decommissioned edges related to SETTLEMENTS_LEDGER v3.06 are excluded from completeness calculations subsequent to metadata refresh (2026-06-24).

Key Performance Indicators (KPIs)

KPI	Target	Achieved	Notes
Lineage Node Coverage	>= 97.0%	98.6%	Above threshold
Lineage Edge Coverage	>= 97.0%	97.9%	Above threshold
Provenance Match Rate	100%	100%	All manifests verified
Timeliness Variances per Quar..	<= 2	1	Within tolerance
Open Observations Older than..	0	0	All open items within SLA

Approvals and Routing

- Routing Path: EDO -> RAE -> FDS -> DGS -> Internal Audit Liaison
- Distribution List: DL-EDO-LINEAGE-Q2; DL-RAE-LRM; DL-DGS-STEWARDS
- Final Archive: Evidence Locker EL region A, folder EL-LRM-Q2-2026; retention category RET-EDO-7Y

Planned Enhancements (Non-Functional)

- Increase sampling density for lineage edges during high-volume days using adaptive selection criteria (tracking: MC-EDO-7489).
- Align REF_COUNTERPARTY alias normalization with monthly legal entity harmonization calendar (tracking: FDS-REF-1201).
- Introduce periodic stewardship dashboards surfacing lineage coverage deltas by domain (tracking: DGS-OBS-337).

End of Section 11. Further details, including extended lineage diagrams and full-quality rule inventories, are provided in Appendices C and D (pages 31-34).

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 31

Section 7.4 -- Lineage Validation: Retail Deposits Exposure Mart (RDEM)

Overview

This section documents the end-to-end lineage validation for the Retail Deposits Exposure Mart (RDEM) in support of the May 2026 monthly close (Business Date 2026-05-31). Validation activities were executed by the Enterprise Data Platform (EDP) in coordination with Finance Data Operations (FDO) and the Data Governance Office (DGO). The primary objective was to verify that transformations, enrichment steps, and data movements from core banking sources through to the consumption mart are complete, consistent with declared lineage, and adhere to the established quality gates. References to incident and change records are provided for full traceability.

Operational Context

- Source Systems: CBS-Core (current and historical partitions), MDM-Party, GL-Recon
- Intermediate Zones: Bronze-Landing, Silver-Conformance, Gold-Aggregation
- Consumption Target: RDEM schema version 3.18 (Finance Analytics sandbox and Regulatory Reporting extracts)
- Schedule: Monthly close cycle with T+1 reconciliation, SLA T+2 14:00 EDT for finalization

Pipeline Execution Summary

- Airflow DAG: rdem_monthly_close
- Run Window: 2026-06-02T05:30:12-04:00 to 2026-06-02T11:46:37-04:00
- Trigger: Scheduled (cron) with manual approval gate CHG-78415 (approved 2026-05-28)
- Orchestrator: EDP-Orchestration v2.6.3
- Engine: Spark 3.5.0 on managed cluster (EDP-Compute-Prod-07)

Pipeline Parameters (Run ID RDEM-2026M05-Prod-001)

- pipeline_id: RDEM-PROD-PIPE-013
- run_id: RDEM-2026M05-Prod-001
- business_date: 2026-05-31
- code_commit_ref: git:edp/rdem@fe92b3a (tag rdem-3.18.0)
- schema_registry_ref: rdem:3.18.0 (MDS-REG-004521)
- reference_data_snapshot: MDM-Party-2026-05-29T22:15Z (SNAP-77219), Holidays-2026-Q2 (SNAP-76011)
- data_provenance_attestation: DPA-2026-06-02-EDP-1173
- quality_gate_profile: QGP-RDEM-2026Q2-01
- null_handling_mode: strict
- late_arrival_threshold_minutes: 180
- pii_mask_policy: PII-MASK-STD-2.4 (irreversible hashing for indirect identifiers)

Step Execution Log (abridged)

1. Step: Ingest CBS-Core daily partitions

   - step_id: S1
   - input: s3://mc-edp-prod/bronze/cbs_core/2026/05/31/*.parq
   - rows_read: 214,873,991
   - completeness_check: passed (100.0% vs manifest)
   - timestamp: 2026-06-02T05:42:16-04:00

2. Step: Conform schema to contract rdem_core_txn_v12
   - step_id: S2
   - rows_input: 214,873,991
   - rows_output: 214,873,991
   - rejected_records: 0
   - schema_mismatch: none
   - timestamp: 2026-06-02T06:10:04-04:00

3. Step: Join MDM-Party master keys
   - step_id: S3
   - input_A: conformed_core_txn
   - input_B: mdm_party_snapshot SNAP-77219
   - join_key: hashed_party_id
   - match_rate: 99.992%
   - enrichment_added: 18 attributes
   - unmatched_records: 17,237 (quarantined per policy)
   - timestamp: 2026-06-02T07:01:55-04:00

4. Step: Compute account exposure measures
   - step_id: S4
   - measures: average_daily_balance, month_end_balance, accrued_interest_est
   - UDF_versions: BALANCE_UDF v1.9.2, INTEREST_ACC v2.4.1
   - rows_processed: 197,121,648
   - timestamp: 2026-06-02T08:18:11-04:00

5. Step: Aggregate to RDEM fact grain (account_id, as_of_date)
   - step_id: S5
   - distinct_accounts: 13,408,221
   - rows_output: 13,408,221
   - sparsity_check: passed
   - timestamp: 2026-06-02T09:12:44-04:00

6. Step: Write to Gold and publish to RDEM schema v3.18
   - step_id: S6
   - target: edp_gold.rdem_exposure_fact
   - partition: as_of_date=2026-05-31

    - write_mode: overwrite_partition
    - manifest_id: MAN-EDP-2026-06-02-0917
    - timestamp: 2026-06-02T09:17:33-04:00

7. Step: Downstream extracts for RRO and Finance Analytics
    - step_id: S7
    - targets: rro_ifrs9_feed, fin_analytics_cube
    - file_count: 14 (RRO), 6 (Analytics)
    - snowflake_query_ids: 01a37c4b-0602-0919, 01a37c5a-0602-0921
    - timestamp: 2026-06-02T09:29:05-04:00

Provenance and Integrity Artifacts

- Source Manifests: MAN-CBS-2026-05-31-Prod-A (signed), MAN-MDM-2026-05-29-Prod-B (signed)
- Hash Checks:
  - conformed_core_txn (S2 output): sha256=9b5f6f0d3f1c2c9e...b81a
  - rdem_exposure_fact (S6 output): sha256=1a8e42f7d9c0bb14...53ef
- Attestation DPA-2026-06-02-EDP-1173:
  - signer: edp-svc-prod (HSM-backed)
  - scope: pipeline RDEM-PROD-PIPE-013, run RDEM-2026M05-Prod-001
  - verification: passed (validated 2026-06-02T11:20:10-04:00 by DGO)

Quality Gate Results (Profile QGP-RDEM-2026Q2-01)

- Row count variance vs prior month: +0.84% (threshold +/-2.0%) -- pass
- Duplicate account_id within as_of_date: 0 (threshold <=5) -- pass
- Null rate for month_end_balance: 0.00% (threshold <=0.05%) -- pass
- Outlier detection (z-score > 4) on accrued_interest_est: 0.012% (threshold <=0.05%) -- pass
- Unmatched MDM keys quarantined and logged: 17,237 (threshold <=30,000) -- pass
- Late arrivals beyond 180 minutes: 0 (threshold <=100) -- pass

Reconciliation to GL-Recon

- GL-Recon dataset: GLR-2026-05-31 v2.7
- Balance reconciliation (sum of liabilities):
  - RDEM: 98,441,227,519.44
  - GL-Recon: 98,441,228,091.12
  - Delta: -571.68 (0.0000006) -- within tolerance
- Ticket Ref: FIN-REC-24671
- Outcome: Accepted by FDO (2026-06-02T10:55:02-04:00)

Lineage Trace Example (Anonymized)

- account_id_hash: a9e1523f0c84a1e8...e1d2
- path:
  - CBS-Core txn_id=TXN-7E1C... -> conformance map v12 -> MDM-Party join (party_key=PK-41D7...) ->

measures computed (UDF BALANCE_UDF v1.9.2) -> aggregated to account_id+as_of_date -> RDEM fact row emitted

- business_date: 2026-05-31
- transformation metadata id: XFORM-RDEM-318-04

Exceptions and Minor Findings

- MCDL-2179: Observed benign drift in attribute mdm_residency_code description text (EN-CA vs CA-EN) in snapshot SNAP-77219. No data value changes. Closed 2026-06-03 as Informational.
- INC-441027: One Snowflake extract (Analytics cube) retried due to transient warehouse resourcing; lineage unaffected. Resolved 2026-06-02T09:31:44-04:00 by CDO-DataOps.
- CRQ-55290: Version bump of INTEREST_ACC UDF to v2.4.1 as pre-approved in CHG-78415. Validation signatures updated accordingly.

Acceptance and Sign-off

- EDP Lead (Data Engineering): S. Patel, 2026-06-02T11:30:19-04:00 -- Approved
- FDO Controller (Close Operations): L. Nguyen, 2026-06-02T11:32:07-04:00 -- Approved
- DGO Steward (Retail Deposits): R. Armitage, 2026-06-02T11:45:53-04:00 -- Approved

Appendix Links

- Appendix F: UDF Change Log (ref. INTEREST_ACC v2.4.1) -- see page 12

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 32

Section 7.5 -- Cross-Environment Parity and Variance Analysis

Purpose

This section summarizes the parity assessment across Development (DEV), Quality Assurance (QA), and Production (PROD) environments for the RDEM lineage during Q2 2026. The scope included schema versions, transformation code references, UDF versions, reference data snapshots, and operational parameters influencing lineage. The assessment ensures that declared lineage is stable and that changes deployed under CHG-78415 did not introduce unapproved lineage divergence.

Assessment Window

- DEV sample runs: 2026-05-21 and 2026-05-23 (business_date=2026-05-15)
- QA dress rehearsal: 2026-05-26 (business_date=2026-05-20)
- PROD operational run: 2026-06-02 (business_date=2026-05-31)

Environment Parity Matrix (Key Assets)

- Schema: rdem:3.18.0 (DEV, QA, PROD) -- parity confirmed
- Code commit (rdem module):
  - DEV: git:edp/rdem@fe92b3a (branch release/3.18)
  - QA: git:edp/rdem@fe92b3a (tag rdem-3.18.0)
  - PROD: git:edp/rdem@fe92b3a (tag rdem-3.18.0)
- UDF versions:
  - BALANCE_UDF: v1.9.2 across DEV/QA/PROD -- parity confirmed
  - INTEREST_ACC: DEV v2.4.1, QA v2.4.1, PROD v2.4.1 -- parity confirmed (post-CHG-78415)
- Reference Data:
  - MDM-Party snapshot:
    - DEV: SNAP-77188 (2026-05-23)
    - QA: SNAP-77204 (2026-05-26)
    - PROD: SNAP-77219 (2026-05-29)
  - Holidays-2026-Q2: SNAP-76011 across all -- parity confirmed
- Quality Gate Profile:
  - DEV: QGP-RDEM-2026Q2-01
  - QA: QGP-RDEM-2026Q2-01
  - PROD: QGP-RDEM-2026Q2-01
- Orchestrator versions:
  - DEV: EDP-Orchestration v2.6.3
  - QA: EDP-Orchestration v2.6.3
  - PROD: EDP-Orchestration v2.6.3

Observed Variances and Disposition

- MDM-Party snapshot recency differed across environments as expected in pipeline promotion timelines (DEV < QA < PROD). DGO confirmed no structural changes between SNAP-77188, -77204, -77219; attribute-level drift was limited to non-critical code descriptions (ticket MCDL-2179).
- DEV compute cluster auto-scaling introduced a 0.3% variation in intermediate partition counts; no impact on result sets (validated by hash comparison at RDEM fact grain).
- QA dress rehearsal exhibited a temporary watermark skew (120 seconds) due to batch window alignment; cleared prior to PROD promotion (INC-440989, Closed).

Parity Evidence (Hashes and IDs)

- DEV RDEM fact sample (2026-05-15): sha256=4f1b...a1c2 (subset), dataset_id: RDEM-DEV-2026M05-F15
- QA RDEM fact sample (2026-05-20): sha256=c1a9...7f34 (subset), dataset_id: RDEM-QA-2026M05-F20
- PROD RDEM fact (2026-05-31): sha256=1a8e42f7d9c0bb14...53ef (full)
- Transformation metadata id alignment: XFORM-RDEM-318-04 across all

Impact Review: CHG-78415 (INTEREST_ACC UDF v2.4.1)

- Change Summary: Non-functional update to rounding mode for fractional daily accruals to remove micro-variance in month-end roll-ups; documented by Model Risk Management (MRM) as immaterial to risk metrics.
- Effective Dates:
  - DEV: 2026-05-21
  - QA: 2026-05-26
  - PROD: 2026-06-02
- Comparative Analysis (QA vs PROD):
  - accounts compared: 13,391,220
  - measure: accrued_interest_est
  - mean absolute difference: 0.0000007
  - max absolute difference: 0.01
  - affected accounts: 0.17%
  - financial impact: below reporting thresholds; no re-statement required
- Validation Artifacts:
  - A/B diff job id: DIFF-RDEM-2026-05-DR-07
  - result manifest: MAN-DIFF-2026-06-02-0930 (signed)
  - reviewer: MRM Analyst K. Duarte (2026-06-02T10:05:12-04:00)

Downstream Consumer Verification

- Consumers: Regulatory Reporting Office (RRO) IFRS9, Finance Analytics, Risk Analytics Liquidity (ALM)
- Consumer Checks:
  - RRO IFRS9 mapping to staging fields remained stable; no lineage shifts detected (RRO-VAL-33218).
  - Finance Analytics cube refreshed with updated schema registry pointer; pivot definitions unchanged (ANL-OPS-19102).
  - ALM inputs unaffected; reference manifest aligned (ALM-FEED-7812).

- Extract Metrics (PROD 2026-06-02):
  - IFRS9 rows exported: 13,408,221; file size aggregate: 21.8 GB; export duration: 14m 12s
  - Analytics cube incremental load: 13.4M rows; rebuild window: 27m 48s
- Sign-offs:
  - RRO: P. Kim, 2026-06-02T12:14:41-04:00 -- No Issues
  - Analytics: J. Mensah, 2026-06-02T12:09:03-04:00 -- No Issues
  - ALM: D. Kowalski, 2026-06-02T12:22:55-04:00 -- No Issues

Operational Metrics Summary

- SLA adherence: On-time (finalization T+2 11:46 EDT vs SLA 14:00 EDT)
- Retry count: 1 (Analytics export transient retry; see INC-441027)
- Data freshness lag: 0 for CBS-Core and GL-Recon; MDM lag 3 days vs PROD run -- expected
- Quarantine volume: 17,237 records (MDM unmatched); routed to stewardship queue STW-RDEM-2026-05

Data Stewardship Queue Details

- queue_id: STW-RDEM-2026-05
- owner_team: DGO-Party Stewardship
- items_opened: 17,237
- items_closed_by_2026-06-15: 13,884
- SLA: 15 business days
- note: Quarantined records do not affect reported balances; lineage flags applied at row-level (flag: mdm_match_status=UNMATCHED)

Sample Lineage Event Log (Provenance IDs)

- event_id: PROV-EDP-2026-06-02-0902-117
  - entity: conformed_core_txn partition 2026-05-31
  - action: schema_validate
  - actor: edp-svc-prod
  - outcome: pass
  - signature: sig-2b71...ce90
- event_id: PROV-EDP-2026-06-02-0917-204
  - entity: rdem_exposure_fact as_of_date=2026-05-31
  - action: publish
  - actor: edp-svc-prod
  - outcome: pass
  - signature: sig-11d0...a4f3
- event_id: PROV-RRO-2026-06-02-0931-018
  - entity: rro_ifrs9_feed batch 2026-05-31
  - action: export
  - actor: rro-svc-prod

- outcome: pass
- signature: sig-0a56...d812

Governance and Catalog Synchronization

- Metadata Services (MDS) sync job: MDS-SYNC-2026-06-02-10:00
- updated entries: 1 (RDEM exposure fact v3.18 publication)
- lineage graph update: nodes +2 (UDF v2.4.1, Diff job DIFF-RDEM-2026-05-DR-07), edges +4
- glossary linkage: "Accrued Interest Estimate" term TERM-FIN-014 mapped to INTEREST_ACC v2.4.1

Stakeholder Acknowledgements

- Data Owner (Retail Deposits): M. Chang -- Acknowledged parity report 2026-06-03T09:07:31-04:00
- Tech Owner (EDP): R. Solanki -- Acknowledged 2026-06-03T09:11:58-04:00
- Compliance Liaison (RRO): A. Tavarez -- Acknowledged 2026-06-03T09:24:45-04:00

Open Follow-ups (Non-Blocking)

- TASK-EDP-12981: Evaluate feasibility to reduce MDM lag from 3 days to 2 days without increasing quarantine rates; due 2026-07-15.
- MCDL-2184: Proposal to add lineage annotation for rounding mode changes to ease downstream audit; under review by DGO.

References

- CHG-78415: UDF version bump authorization and regression results
- INC-440989: QA watermark skew (closed)
- INC-441027: PROD Analytics export transient retry (closed)
- MCDL-2179: Attribute description drift (informational)

Conclusion

Cross-environment parity is confirmed for RDEM lineage as of the Q2 2026 close cycle. The deployed change under CHG-78415 is reflected consistently across environments, with no material impact to balances or regulatory reporting. Provenance attestations, reconciliation results, and consumer validations are complete and signed off. No lineage corrective actions are required at this time.

Meridian Capital -- Data Lineage and Provenance Report -- Q2 2026

Page 33

9. Cross-Domain Lineage Variance Resolution (Weeks 23-26, 2026)

Overview

Between 2026-06-03 and 2026-06-28, Enterprise Data Platform (EDP), Finance Data Integrity (FDI), and the Data Governance Office (DGO) concluded a targeted review of lineage variances observed across Treasury, Risk, and Finance reporting marts. The review focused on reconciling attribute-level transformations recorded in the Metadata Services (MDS) lineage graph against operational outputs from nightly pipelines. No data loss events were identified. Three material variances were found, all attributable to documentation staleness or scheduling misalignment rather than transformational defects. Corrective updates were captured under change control and evidenced with audit artefacts.

Key quantitative highlights

- 142 lineage paths sampled end-to-end (source to consuming report)
- 3 variance cases opened; 3 closed within SLA (5 business days)
- 0 rejected postings attributable to lineage errors
- 99.2% rule conformance to declared business term mappings (target >=98.5%)
- 100% provenance manifest availability for sampled snapshots

Variance register extract (closed cases only)

Case ID | Opened (UTC) | Domain | Lineage node | Variance type | Magnitude | Status | Ticket

MCDL-2026-1045 | 2026-06-12T08:31:12Z | Treasury | ds_treasury_rates_curated_v3 -> mart_liq_gap_v2 | Attribute mapping label/staleness | Non-impacting | Closed | INC-EDP-28451

MCDL-2026-1071 | 2026-06-18T14:22:07Z | Risk | ds_exposure_vintages_v5 -> mart_rcs_loss_v3 | Transformation description drift | Non-impacting | Closed | PRB-RAG-1199

Event timeline excerpt -- Case MCDL-2026-1045 (Treasury rates label staleness)

- 2026-06-12T08:31:12Z: Alert created by DQ watch MDS-DQ-TERMS-021 following weekly glossary-to-lineage sync. Trigger threshold met when curated label "SwapRate_3M" in mart_liq_gap_v2 did not reflect upstream term rename ("IRS_3M_ParRate") performed under CR-REFDATA-514.
- 2026-06-12T09:02:55Z: EDP triage confirms transformation logic unchanged; only business label mismatch present. Provenance manifests for jr_2026_06_11_2230Z_0061 and jr_2026_06_12_2231Z_0062 attached to INC-EDP-28451.
- 2026-06-13T15:47:18Z: DGO validates glossary entry version 2026.06.v2 and authorizes lineage node relabeling.
- 2026-06-14T06:20:03Z: MDS updates node alias set; dependency cache refreshed. No downstream re-compute required.
- 2026-06-14T07:15:11Z: Case closed. Control attestation logged (ATT-DGO-2026-173).

Reconciliation job parameters (Treasury -> Liquidity Gap Mart)

Parameter | Value

Reconciliation job ID | recon_tsy_mart_rates_v3

SLA (internal) | T+1 variance report, 06:30 UTC

Root cause summaries and corrective actions

- Case MCDL-2026-1045 (INC-EDP-28451): Upstream business glossary rename under CR-REFDATA-514 not propagated to the mart node label within 48 hours due to deferred refresh of non-functional metadata caches during maintenance. No data values or calculations affected. Corrective action: MDS lineage alias refresh moved to post-glossary-change immediate queue for term-critical domains. Evidence: CHG-MDS-7682, run log LOG-MDS-20260614-0711.
- Case MCDL-2026-1071 (PRB-RAG-1199): Narrative description for "PD_bucket_rollforward" transformation in ds_exposure_vintages_v5 lagged one semantic release behind code promotion; actual logic identical (validated via hash-equal transform graph). Corrective action: Enforce synchronized metadata publish on promotion events by adding a required checklist item in CR template. Evidence: CR-ETL-2223 checklist, ATT-RAG-2026-055.
- Case MCDL-2026-1082 (INC-FDI-30087): Finance mart refresh for rpt_ifrs_gl_v5 executed on schedule; documentation still referenced pre-patch cycle window (00:30 UTC versus new 00:20 UTC). Variance was purely descriptive. Corrective action: Update runbook metadata and scheduler notes. Evidence: CHG-OPS-7649, RBK-FIN-GL-2026-06.v3.

Control and monitoring adjustments (non-intrusive)

- Extended metadata freshness SLO from "<=48h" to "<=24h" for term-critical datasets in Treasury and Finance domains.
- Enabled cross-check in weekly lineage audit to reconcile glossary rename events with downstream alias propagation (control ID CTRL-DGO-LIN-014).
- Increased sample size for label-only reconciliation from 5% to 10% for the next two cycles to validate stability post-change; will revert after two clean runs.

Stakeholder sign-offs (variance cases)

Role | Name | Team | Timestamp (UTC) | Reference

Data Steward | L. Guerrero | Treasury Data Stewardship | 2026-06-14T07:10:31Z | ATT-DGO-2026-173

Platform Owner | C. Yamada | EDP | 2026-06-14T07:12:06Z | ATT-EDP-2026-409

Reporting Lead | S. MacRae | Finance Reporting (RRT) | 2026-06-28T09:21:43Z | ATT-RRT-2026-092

Lineage verification sampling details

Sampling approach | Result

Source-to-mart paths sampled | 142

Domains | Treasury (54), Risk (48), Finance (40)

Provenance manifest presence | 142/142 (100%)

Transform graph hash match to registry | 142/142 (100%)

Business term to column label consistency | 141/142 (99.3%); 1 case resolved (MCDL-2026-1045)

Artifacts indexed this period

- Provenance manifests: PVN-2026-06-11-2230Z-0061, PVN-2026-06-12-2231Z-0062, PVN-2026-06-24-0020Z-0114
- Lineage graph snapshots: LGS-2026.06.14.v3, LGS-2026.06.28.v1
- Reconciliation outputs: ART-EDP-22487, ART-RAG-11803, ART-FDI-33041

Observations and outcomes

- There was no evidence of computational drift in calculation-intensive nodes (e.g., netted liquidity gaps, loss curves). All observed variances were descriptive and limited to labels, timing notes, or commentary fields. That aligns with the 12-month trend of sub-1% documentation drift in term-critical areas.
- Traceability improved in Risk domain following the consolidation of PD and LGD lineage subgraphs (CHG-RAG-MDS-942). The consolidation reduced ambiguous edges by 18%, simplifying reconciliation troubleshooting.
- Stakeholder feedback indicates higher clarity in Finance runbooks post-refresh, decreasing first-line queries by 23% week-over-week.

Planned follow-ups (no exceptions requested)

- DGO to conduct a glossary-to-lineage delta workshop with domain stewards in early Q3 to standardize alias naming where synonyms are prevalent (work item DGO-WS-2026-07-07).
- EDP to retire the weekly deferred metadata cache refresh and move to event-driven invalidation for term updates (CHG-MDS-7729).
- RAG to expand narrative coverage for transformation families applied to vintage recalculation and bucketing (DOC-RAG-TRF-2026.v4).

Meridian Capital -- Data Lineage and Provenance Report -- Q2 2026

Page 34

10. SLA and Completeness Conformance; Traceability Samples

Service level adherence (Q2 Weeks 23-26)

Overall SLA performance for lineage capture, provenance manifests, and scheduled refresh of lineage-aware datasets remained within target thresholds. Two minor timing deviations (documentation only) were observed and corrected without downstream impact.

SLA adherence summary

Dataset | Job ID | SLO (availability) | Actual | SLO (provenance) | Actual | Notes

ds_treasury_rates_curated_v3 | jr_2026_06_14_0205Z_0032 | >=99.5% | 99.9% | 100% per run | 100% | --

mart_liq_gap_v2 | jr_2026_06_14_0315Z_0041 | >=99.0% | 99.6% | 100% per run | 100% | Node label updated 2026-06-14

ds_exposure_vintages_v5 | jr_2026_06_19_0110Z_0091 | >=99.0% | 99.4% | 100% per run | 100% | Narrative sync applied

rpt_ifrs_gl_v5 | jr_2026_06_24_0020Z_0114 | >=99.5% | 99.7% | 100% per run | 100% | Schedule note corrected

Metadata completeness matrix (sampled nodes)

Measure | Target | Treasury | Risk | Finance | Aggregate

Business term coverage | >=98% | 99.1% | 98.7% | 99.4% | 99.1%

Technical lineage edges resolved | >=99% | 100% | 99.5% | 100% | 99.8%

Transformation descriptions present | >=97% | 98.4% | 97.1% | 98.9% | 98.1%

Data owner/steward tagged | 100% | 100% | 100% | 100% | 100%

Provenance hash recorded | 100% | 100% | 100% | 100% | 100%

Provenance attestations (sample)

Traceability walkthrough (sample path A: FX trade to IFRS GL)

Narrative

This sample demonstrates lineage from source FX trade capture to IFRS General Ledger posting, highlighting key transformation families and associated controls. The walkthrough uses a single trace key (trade_id=FX8762143; valuation_date=2026-06-20) selected from standard sampling.

Trace steps (sample path A)

Step | Process | Dataset | Transform summary | Control reference

1 | Source extract | ds_fx_trades_raw_v9 | Daily incremental extract (validated schema v9) | CTRL-EDP-ING-011

2 | Standardize | ds_fx_trades_std_v7 | Normalize currency codes; map counterparty ID to master | CTRL-EDP-STD-007

3 | Enrich | ds_counterparty_dim_v12 join | Attach risk ratings; effective-dated SCD Type 2 | CTRL-DGO-DIM-003

4 | Aggregate | ds_fx_pnl_daily_v6 | Compute realized/unrealized P&L; FX reval at EOD | CTRL-RAG-CALC-021

5 | Map to chart | ds_gl_stg_v7 | Map P&L to GL accounts using mapping table v5.4 | CTRL-FDI-MAP-014

6 | Post to GL | rpt_ifrs_gl_v5 | Load summarized journal lines; validations pass rate 100% | CTRL-FDI-LOAD-010

Parameter extract for trace key FX8762143

Parameter | Value

Trace key | trade_id=FX8762143; valuation_date=2026-06-20

GL accounts mapped | 410100 (Realized FX), 410200 (Unrealized FX)

P&L amounts | Realized=1,245.32; Unrealized=-98.44 (USD)

Posting batch | gl_batch_id=GL20260624_0019

Provenance links | PVN-2026-06-20-STD, PVN-2026-06-20-PNL, PVN-2026-06-24-GL

Validation checkpoints (trace key FX8762143)

Checkpoint | Result | Evidence

Schema conformance (v9) | Pass | SCH-VAL-20260620-001

Dim join completeness | 100% | ENR-VAL-20260620-022

P&L calc variance vs. reference | <=0.5 bp | RECON-RAG-20260620-007

GL mapping coverage | 100% | MAP-VAL-20260624-010

Journal posting validations | 100% | GL-VAL-20260624-019

Change and documentation references

- CR-ETL-2223: Metadata publish synchronization for exposure vintages; effective 2026-06-19.
- CHG-OPS-7649: Finance scheduler note correction; effective 2026-06-24.
- CHG-MDS-7682: Lineage alias post-glossary event refresh; effective 2026-06-14.
- DOC-RRT-IFRS-GL.v5: Runbook and transformation catalogue for IFRS GL mart; updated 2026-06-24.

Findings and dispositions

- No defects in transformation logic identified across sampled traces. All observed differences were documentary in nature and corrected within established SLAs.
- Metadata coverage met or exceeded targets in all domains, with minor narrative lag in Risk addressed via CR-ETL-2223.
- Provenance attestations were complete and timely; hash verification succeeded in all sampled snapshots.

Metrics roll-up (Weeks 23-26)

Metric | Target | Actual

Lineage path completeness | >=99% | 99.8%

DQ rules conformance (critical) | >=98.5% | 99.2%

Provenance manifest availability | 100% | 100%

Traceable report columns (IFRS pack) | >=98% | 99.5%

Risk assessment and accepted items

- Residual risk: Low. Documentation staleness risk reduced by moving to event-driven alias refresh. No residual risk accepted beyond standard operational tolerance.
- Deferred enhancements: Consolidate synonym management for Treasury terms to reduce alias proliferation (backlog DGO-ENH-2026-091; target Q3).

Next-quarter enhancement backlog (selected)

Backlog ID | Title | Owner | Target quarter

EDP-ENH-2026-144 | Event-driven metadata cache invalidation (phase 2) | EDP | Q3 2026

DGO-ENH-2026-091 | Term synonym governance and alias policy | DGO | Q3 2026

RAG-ENH-2026-077 | Expanded narrative coverage for vintage calc families | RAG | Q3 2026

FDI-ENH-2026-063 | Automated linkage of GL mapping versions to lineage nodes | FDI | Q3 2026

Attestations and approvals

Role | Name | Team | Date (UTC) | Statement

Head of Data Governance | M. Zhang | DGO | 2026-06-29 | Confirms completeness and accuracy of lineage documentation for the period.

Platform Operations Lead | A. Romero | EDP | 2026-06-29 | Confirms SLA adherence and provenance availability per metrics.

Regulatory Reporting Director | K. Patel | RRT | 2026-06-29 | Confirms traceability suffices for IFRS and internal management reporting.

Data Lineage and Provenance Report -- Q2 2026

Meridian Capital

Page 35 of 35 -- Closeout, Certification, and Appendices Index

This page provides the closing summary for Q2 2026 lineage verification activities across prioritized domains (Retail Banking, Wholesale Credit, Treasury Financing, Market Data Enrichment) and documents the consolidated outcomes of control gates, material changes logged via change control, outstanding items transitioning to Q3, and formal attestations. All content on this page reflects a finalized state as of 2026-06-30T23:59:59Z and references underlying tickets, lineage snapshots, and execution records stored in the Enterprise Data Platform (EDP) and the Data Governance Office (DGO) repository.

Lineage Snapshot Metadata

- Snapshot owner: Data Governance Office (DGO), Lineage Programs
- Custodian teams: Enterprise Data Platform (EDP), Risk Analytics Tech (RAT), Finance Data Ops (FDO), Compliance Reporting Services (CRS)
- QA window: 2026-06-24 through 2026-06-30
- Coverage: 128 critical data elements (CDEs); 41 curated pipelines; 26 source systems

Table: Snapshot Parameters

Parameter | Value

Lineage Snapshot ID | LIN-2026Q2-0007

Reference Artefact | EDP Lineage Graph v3.12 (graphdb:lin_v3_12)

Scope | Retail, Wholesale Credit, Treasury, Market Data

Effective Window | 2026-04-01 to 2026-06-30

Approval Ticket | DGO-APP-2194 (Closed 2026-06-30 19:04:12Z)

Record Location | dgo://lineage/snapshots/2026Q2/LIN-2026Q2-0007

Primary Validator | DGO-QA Team Alpha

Secondary Validator | FDO Controls & Reconciliations

Control Gate Outcomes

Quality gates and reconciliations executed under standardized control procedures were recorded as part of the QA window. No material defects were observed affecting regulatory or financial reporting.

Table: Control Gate Summary

Gate | Control ID | Scope | Pass/Fail | Timestamps (UTC) | Owner

CDE Completeness | CG-01 | 128 CDEs | Pass | 2026-06-28 14:22:18Z | DGO-QA

Transformation Traceability | CG-02 | 41 pipelines | Pass | 2026-06-28 16:05:44Z | EDP-QC

Source-to-Target Recon | CG-03 | 9 marts | Pass | 2026-06-29 09:31:12Z | FDO

Reference Data Consistency | CG-04 | 6 ref dims | Pass with note | 2026-06-29 11:47:03Z | CRS

Data Timeliness SLA | CG-05 | D+1 batches | Pass | 2026-06-30 03:55:27Z | RAT

Note: CG-04 Pass with note relates to mds_ref.currency_dim latent updates on 2026-06-07 weekly cycle; variance immaterial to quarter-end measures (tracked under EDP-REF-561).

Change Control Summary

All lineage-impacting changes were processed through the EDP Change Advisory Board (CAB) per standard cadence. The following tickets represent the quarter's lineage-relevant closures and deferrals that informed the Q2 snapshot.

Table: Change Tickets (Closed/Deferred in Q2)

Ticket | Title | Status | Effective Date | Teams | Notes

MC-EDP-14237 | Standardize txn_fact exchange rate enrichment | Closed | 2026-05-12 | EDP, CRS | Harmonized FX source priority; lineage updated in LIN-2026Q2-0004

RAT-MART-773 | Version bump to pd_curve pipeline (v3.1) | Closed | 2026-06-10 | RAT | Non-breaking; column rename handled via semantic mapping

FDO-RECON-995 | Add contra account join in gl_posting view | Closed | 2026-06-17 | FDO | Improved recon explainability; no metric shift

EDP-REF-561 | Weekly refdata cadence memoization | Closed | 2026-06-07 | CRS, EDP | Addressed CG-04 note; no residual impact

DGO-EXC-204 | Defer deprecation of legacy acct_dim (v1) | Deferred to Q3 | N/A | DGO, FDO | Retained read-only for stability; see "Deprecations" note

Variance and Exception Register

No high-severity exceptions remain open. One medium-severity variance was documented and mitigated without downstream reporting impact.

Table: Variances Recorded

ID | Affected Asset | Variance Type | Opened/Closed | Owner | Disposition

VAR-2026Q2-031 | mds_ref.currency_dim | Timeliness (weekly lag) | 2026-06-07/2026-06-14 | CRS | Remediated, CG-04 note retained for audit

VAR-2026Q2-044 | edm_core.txn_fact | Derivation visibility | 2026-06-21/2026-06-23 | EDP | Documented UDF lineage expansion; no numeric drift

Operational Execution Record

Execution records are summarized below for key batch runs underlying attested metrics. Results are within expected tolerances; no backfills in quarter-end window.

Table: Execution Log Excerpt

Run ID | Pipeline | Time (UTC) | Duration | Status | Checkpoints Passed

2026-06-30T03:00:00Z | dag_risk_pd_daily_v3 | 03:00-03:41 | 41m | Success | DQ-07, DQ-12, DQ-18

2026-06-30T04:10:00Z | dag_gl_postings_close_QE | 04:10-05:02 | 52m | Success | DQ-03, DQ-09

2026-06-30T05:30:00Z | dag_fx_rates_refdim | 05:30-05:38 | 8m | Success | DQ-04, DQ-11

2026-06-30T06:15:00Z | dag_marketdata_bval_ingest | 06:15-06:43 | 28m | Success | DQ-05, DQ-15

Source System Provenance Rollup

- Internal: core_banking_ibs (Retail), treasury_ktp (Treasury), gl_ledger_v2 (Finance)
- External: Bloomberg BVAL (market data), ICE Data Services (pricing), external_card_issuer_feed (Retail partner feed)

- Inbound channel identifiers: src_ib_core_01, src_tsy_ktp_02, src_gl_02, src_bval_01, src_ice_01
- Provenance assertions are recorded per source per batch and retained for 24 months in the DGO repository; retention confirmed by ILM under ILM-Retention-Policy-Data-Std v7.3

Table: Source-to-Mart Traceability (Selected)

Source | Staging | Curated | Mart | Downstream Consumer

src_ib_core_01 | stg_ib.txn_raw | edm_core.txn_fact | retail_mart.net_interest | Finance Reporting (FIN-RPT)

src_bval_01 | stg_mkt.bval_px | mds_ref.benchmark_px | risk_mart.pd_curve | Risk Analytics (RISK-ANL)

src_gl_02 | stg_fin.gl_raw | fin_curated.gl_posting | finance_mart.pnl_agg | CFO Analytics (CFO-ANL)

Data Quality KPIs (Quarter-End Snapshot)

- KPI-01 CDE coverage complete for scope: 100% (128/128)
- KPI-02 Trace depth (source to report field): >= 4 hops for 93% of CDEs; min 3 hops achieved for remaining 7%
- KPI-03 SLA adherence (D+1): 99.2% on-time runs (target >= 98.5%)
- KPI-04 Threshold breaches: 0 Sev-1, 0 Sev-2, 3 Sev-3 (documented, mitigated)
- KPI-05 Documentation freshness (last update <= 90 days): 97% assets in scope

Deprecations and Forward Actions

- acct_dim (legacy v1) deprecation deferred to Q3 2026 per DGO-EXC-204 to maintain continuity for a non-critical dashboard in Finance Ops; lineage maps include both v1 (read-only) and v2 (active) with explicit deconfliction through semantic layer tagging.
- The edp_transform.udf_fx_norm v2.0 will supersede v1.7 in Q3 (no Q2 impact). Mapping changes pre-validated under sandbox LIN-2026Q3-PRV-0001.

Attestations and Sign-offs

Table: Attestation Register

Role | Name | Team | Timestamp (UTC) | Attestation

Data Stewardship Lead | Priya Nair | DGO | 2026-06-30 19:22:10Z | Scope completeness and lineage accuracy attested

Platform QA Manager | Jorge Alvarez | EDP-QC | 2026-06-30 20:04:55Z | Control gates executed; outcomes recorded

Finance Controls Lead | Mei Chen | FDO | 2026-06-30 20:47:31Z | Reconciliations aligned with GL; no material variances

Risk Tech Owner | Daniel Kline | RAT | 2026-06-30 21:15:03Z | Risk marts lineage consistent post v3.1 changes

Compliance Reporting Lead | Sofia Martins | CRS | 2026-06-30 21:52:44Z | Reference data cadence stabilized; documentation current

Final Statement

As of the timestamps noted, the Data Governance Office certifies that the Q2 2026 lineage and provenance records for the in-scope domains are complete, accurate to the best of knowledge, and supported by the referenced artefacts and execution evidence. No additional actions are required for quarter-end beyond routine monitoring. All residual notes have been translated into Q3 work items and scheduled on the standard roadmap.
